TO

AN ESSAY ON MILTON'S USE AND IMITATION OF THE
MODERNS IN HIS PARADISE LOST.

[FIRST PUBLISHED IN THE YEAR MDCCCL.]

IT is now more than half a century since the *Paradise Lost*, having broke through the clouds with which the unpopularity of the author, for a time, obscured it, has attracted the general admiration of mankind, who have endeavoured to compensate the error of their first neglect, by lavish praises and boundless veneration. There seems to have arisen a contest, among men of genius and literature, who should most advance its honour, or best distinguish its beauties. Some have revised editions, others have published commentaries, and

* “ It is to be hoped, nay, it is expected, that the elegant and nervous writer, whose judicious sentiments, and inimitable style points out the author of *Lauder's Preface and Postscript*, will no longer allow one to plume himself with his feathers, who appears so little to have deserved his assistance, an assistance which I am persuaded would never have been communicated, had there been the least suspicion of those facts which I have been the instrument of conveying to the world in these sheets. —Milton vindicated from the Charge of Plagiarism brought against him by Mr. *Lauder*, and *Lauder* himself convicted of several Forgeries and gross Impositions on the Publick. By John Douglas, M A Rector of Eaton Constantine, Salop, 8vo 1751, p 77

all have endeavoured to make their particular studies, in some degree, subservient to this general emulation.

Among the inquiries to which this ardour of criticism has naturally given occasion, none is more obscure in itself, or more worthy of rational curiosity, than a retrospection of the progress of this mighty genius, in the construction of his work; a view of the fabrick gradually rising, perhaps from small beginnings, till its foundation rests in the centre, and its turrets sparkle in the skies; to trace back the structure, through all its varieties, to the simplicity of its first plan, to find what was first projected, whence the scheme was taken, how it was improved, by what assistance it was executed, and from what stores the materials were collected, whether its founder dug them from the quarries of nature, or demolished other buildings to embellish his own.

This inquiry has been, indeed, not wholly neglected, nor, perhaps, prosecuted with the care and diligence that it deserves. Several criticks have offered their conjectures, but none have much endeavoured to enforce or ascertain them*. Mr. Voltaire tell us, without proof, that the first hint of *Paradise Lost* was taken from a farce called *Adamo*, written by a player†, Dr. Pearce, that it

* Essay upon the Civil Wars of France, and also upon the Epick Poetry of the European Nations, from Homer down to Milton, 8vo 1727, p 103 E

† Preface to a review of the text of the twelve books of Milton's *Paradise Lost*, in which the chief of Dr Bentley's emendations are considered, 8vo 1733 E

was derived from an Italian tragedy, called *Il Paradiso Perso*; and Mr. Peck*, that it was borrowed from a wild romance. Any of these conjectures may possibly be true, but, as they stand without sufficient proof, it must be granted, likewise, that they may all possibly be false; at least they cannot preclude any other opinion, which without argument has the same claim to credit, and may perhaps be shown, by resistless evidence, to be better founded

It is related, by steady and uncontroverted tradition, that the *Paradise Lost* was at first a tragedy, and, therefore, amongst tragedies, the first hint is properly to be sought. In a manuscript, published from Milton's own hand, among a great number of subjects for tragedy, is *Adam Unparadised*, or *Adam in Exile*; and this, therefore, may be justly supposed the embryo of this great poem. As it is observable, that all these subjects had been treated by others, the manuscript can be supposed nothing more, than a memorial or catalogue of plays, which, for some reason, the writer thought worthy of his attention. When, therefore, I had observed, that *Adam in Exile* was named amongst them, I doubted not but, in finding the original of that tragedy, I should disclose the genuine source of *Paradise Lost*. Nor was my expectation disappointed; for, having procured the *Adamus exsul* of Grotius, I found, or imagined myself to find, the first draught, the *prima stammina* of this wonderful poem.

* *New Memoirs of Mr John Milton* By Francis Peck, 4to 1740, p 52 E

Having thus traced the original of this work, I was naturally induced to continue my search to the collateral relations, which it might be supposed to have contracted, in its progress to maturity. and having, at least, persuaded my own judgment that the search has not been entirely ineffectual, I now lay the result of my labours before the publick, with full conviction, that in questions of this kind, the world cannot be *mistaken*, at least cannot long continue in error.

I cannot avoid acknowledging the candour of the author of that excellent monthly book, the Gentleman's Magazine, in giving admission to the specimens in favour of this argument, and his impartiality in as freely inserting the several answers. I shall here subjoin some extracts from the xvth volume of this work, which I think suitable to my purpose. To which I have added, in order to obviate every pretence for cavil, a list of the authors quoted in the following essay, with their respective dates, in comparison with the date of Paradise Lost.

POSTSCRIPT

WHEN this essay was almost finished, the splendid edition of Paradise Lost, so long promised by the reverend Dr Newton, fell into my hands; of which I had, however, so little use, that as it would be injustice to censure, it would be flattery to commend it and I should have totally forborne the mention of a book that I have not read, had not one passage, at the conclusion, of the life of Milton, excited in me too much pity and indignation to be suppressed in silence

“Deborah, Milton’s youngest daughter,” says the editor, “was married to Mr. Abraham Clarke, a weaver, in Spitalfields, and died in August, 1727, in the 76th year of her age. She had ten children. Elizabeth, the youngest, was married to Mr Thomas Foster, a weaver, in Spitalfields, and had seven children, who are all dead, and she herself is aged about *sixty*, and *weak* and *infirm*. She seemeth to be a *good plain sensible woman*, and has confirmed several particulars related above, and informed me of some others, which she had often heard from her mother” These the doctor enumerates, and then adds, “In all probability Milton’s whole family will be extinct with her, and he can live only in his writings. And such is the caprice of fortune, this grand-daughter of a man, who will be an everlasting glory to the nation, has now for some years, with her husband, kept a little chandler’s or grocer’s shop, for their subsistence, lately at the lower Holloway, in the road between Highgate and London, and at present in Cock-lane, not far from Shoreditch church”

That this relation is true cannot be questioned. but, surely, the honour of letters, the dignity of sacred poetry, the spirit of the English nation, and the glory of human nature, require—that it should be true no longer —In an age, in which statues are erected to the honour of this great writer, in which his effigy has been diffused on medals, and his work propagated by translations, and illustrated by commentaries, in an age, which amidst all its vices, and all its follies, has not become infamous for want of charity: it may be, surely, allowed to hope, that the living remains of Milton will be no longer

suffered to languish in distress. It is yet in the power of a great people to reward the poet whose name they boast, and from their alliance to whose genius they claim some kind of superiority to every other nation of the earth, that poet, whose works may possibly be read when every other monument of British greatness shall be obliterated, to reward him—not with pictures, or with medals, which, if he sees, he sees with contempt, but—with tokens of gratitude, which he, perhaps, may even now consider as not unworthy the regard of an immortal spirit. And surely, to those, who refuse their names to no other scheme of expense, it will not be unwelcome, that a subscription is proposed, for relieving, in the languor of age, the pains of disease, and the contempt of poverty, the grand-daughter of the author of *Paradise Lost*. Nor can it be questioned, that if I, who have been marked out as the Zoilus of Milton, think this regard due to his posterity, the design will be warmly seconded by those, whose lives have been employed, in discovering his excellencies, and extending his reputation.

FIRST PRINTED IN THE YEAR MDCCLI

Of this pamphlet Mr Lauder gives the following account. "An ingenious gentleman (for whose amazing abilities I had conceived the highest veneration, and in whose candour and friendship I reposed the most implicit and unlimited confidence) advised me to make an unreserved disclosure of all the lines I had interpolated against Milton, with this view, chiefly, that no future critics might ever have an opportunity of valuing themselves upon small discoveries of a few lines, which would serve to revive my error, and keep the controversy eternally alive

"With this expedient I then cheerfully complied, when that gentleman wrote for me the letter that was published in my name to Mr Douglas, in which he committed one error that proved fatal to me, and at the same time injurious to the publick. For, in place of acknowledging that such and such particular passages only were interpolated, he gave up the whole Essay against Milton as delusion and misrepresentation, and thereby imposed more grievously on the publick than I had done, and that too in terms much more submissive and abject than the nature of the offence required

"Though this letter, in many respects, contained not my sentiments, as plainly appears from the contradictory Postscript subjoined to it, yet such was my infaturation at that time, and implicit confidence in my friend, that I suffered it to be printed in my name, though I was previously informed by one of the greatest men of the age of its hurtful tendency, which I have since fully experienced to my cost

"That the gentleman meant to serve me, and was really of opinion that the method he proposed might probably prove effectual for rescuing me from the odium of the publick, and in some measure restoring my character to the honour it had lost, I was then disposed to believe. His repeated acts of friendship to me on former occasions, in conjunction with a reputation universally established for candour and integrity, left me little room to doubt it, though it is certainly a most preposterous method for a criminal, in order to obtain pardon for one act of felony, to confess himself guilty of a thousand. However, I cannot but condemn myself for placing so implicit a confidence in the judgment of any man, how great or good soever, as to suffer his mistakes to be given to the publick as my opinion." King Charles vindicated from the charge of Plagiarism, brought against him by Milton, and Milton himself convicted of Forgery and a gross Imposition on the Publick, 8vo 1754 p 3 E

TO THE

REVEREND MR. DOUGLAS.

SIR,

CANDOUR and tenderness are in any relation, and on all occasions, eminently amiable, but when they are found in an adversary, and found so prevalent as to overpower that zeal which his cause excites, and that heat which naturally increases in the prosecution of argument, and which may be in a great measure justified by the love of truth, they certainly appear with particular advantages; and it is impossible not to envy those who possess the friendship of him, whom it is even some degree of good fortune to have known as an enemy.

I will not so far dissemble my weakness, or my fault, as not to confess that my wish was to have passed undetected; but since it has been my fortune to fail in my original design, to have the supposititious passages which I have inserted in my quotations made known to the world, and the shade which began to gather on the splendour of Milton totally dispersed, I cannot but count it an elevation of my pain, that I have been defeated by a man who knows how to use advantages with so much moderation, and can enjoy the honour of conquest without the insolence of triumph

It was one of the maxims of the Spartans, not to press upon a flying army, and therefore their enemies were always ready to quit the field, because they knew the danger was only in opposing. The civility with which you have thought proper to treat me when you had incontestable superiority, has inclined me to make your victory complete, without any further struggle, and not only publickly to acknowledge the truth of the charge which you have hitherto advanced, but to confess, without the least dissimulation, subterfuge, or concealment, every other interpolation I have made in those authors, which you have not yet had opportunity to examine.

On the sincerity and punctuality of this confession, I am willing to depend for all the future regard of mankind, and cannot but indulge some hopes, that they whom my offence has alienated from me, may by this instance of ingenuity and repentance, be propiated and reconciled. Whatever be the event, I shall at least have done all that can be done in reparation of my former injuries to Milton, to truth, and to mankind, and entreat that those who shall continue implacable, will examine their own hearts, whether they have not committed equal crimes without equal proofs of sorrow, or equal acts of atonement*.

* The interpolations are distinguished by *Italic* characters

Tune, ait, imperio regere omnia solus , et una
 Filius iste tuus, qui se tibi subicit ultro,
 Ac genibus minor ad terram prosternit, et offert
 Nescio quos toties animi servilis honores ?
 Et tamen æterni proles æterna Jehovahæ
 Audit ab æthereâ luteâque propagine mundi.
*(Scilicet hunc natum dixisti, cuncta regentem ,
 Cœlitibus regem cunctis, dominumque supremum)*
 Huic ego sim supplex ? ego ? quo præstantior alter
 Non agit in superis. Mihi jus dabit ille, suum qui
 Dat caput alterius sub jus et vincula legum ?
 Semideus reget iste polos ? reget avia terræ ?
 Me pressum leviori manu fortuna tenebit ?
Et cogar æternum duplici servire tyranno ?
 Haud ita Tu solus non polles fortibus ausis,
 Non ego sic cecidi, nec sic mea fata premuntur,

Ut nequeam relevare caput, colloque superbum
 Excutere imperium. Mihi si mea dextra favebit,
 Audeo totius mihi jus promittere mundi.

Essay, page 152.

Throni, dominationes, principatus, virtutes, potestates, is said to be a line borrowed by Milton from the title-page of Heywood's *Hierarchy of Angels*. But there are more words in Heywood's title, and, according to his own arrangement of his subjects, they should be read thus—*Seraphim, cherubim, throni, potestates, angeli, archangeli, principatus, dominationes*.

These are my interpolations, minutely traced without any arts of evasion. Whether from the passages that yet remain, any reader will be convinced of my general assertion, and allow, that Milton had recourse for assistance to any of the authors whose names I have mentioned, I shall not now be very diligent to inquire, for I had no particular pleasure in subverting the reputation of Milton, which I had myself once endeavoured to exalt*, and of which, the foundation had always remained untouched by me, had not my credit and

* Virorum maximus—Joannes Miltonus— Poeta celeberrimus—non Angliæ modo, soli natalis, verum generis humani ornamentum—cujus eximius liber, Anglicanis versibus conscriptus, vulgo Paradisus Amissus, immortalis illud ingenii monumentum, cum ipsa ferè æternitate perennaturum est opus !—Hujus memoriam Anglorum primus, post tantum, proli dolor ! ab tanti excessu poetæ intervallum, statuâ eleganti in loco celeberrimo, cœnobio Westmonasteriensi, positâ, regum, principum, antistitum,

my interest been blasted, or thought to be blasted, by the shade which it cast from its boundless elevation.

About ten years ago, I published an edition of Dr Johnston's translation of the Psalms, and having procured from the general assembly of the church of Scotland a recommendation of its use to the lower classes of grammar-schools, into which I had begun to introduce it, though not without much controversy and opposition, I thought it likely that I should, by annual publications, improve my little fortune, and be enabled to support myself in freedom from the miseries of indigence. But Mr Pope, in his malevolence to Mr. Benson, who had distinguished himself by his fondness for the same version, destroyed all my hopes by a distich, in which he places Johnston in a contemptuous comparison with the author of *Paradise Lost* †.

illustriumque Angliæ virorum cœmeterio, vir ornatissimus, Guilielmus Benson, persecutus est. *Poetarum Scotorum Musæ Sacræ in præfatione, Edinb. 1739*

A character, as high and honourable as ever was bestowed upon him by the most sanguine of his admirers! and as this was my cool and sincere opinion of that wonderful man formerly, so I declare it to be the same still, and ever will be, notwithstanding all appearances to the contrary, occasioned merely by passion and resentment, which appear, however, by the Postscript to the Essay, to be so far from extending to the posterity of Milton, that I recommend his only remaining descendant, in the warmest terms, to the publick

† On two unequal crutches prop'd he * came,

Milton's on this, on that *onc* Johnston's name

Dunciad Book IV

* *Benson*] This man endeavoured to raise himself to fame, by erecting monuments, striking coins, and procuring translations of

From this time, all my praises of Johnstou became ridiculous, and I was censured with great freedom for forcing upon the schools an author whom Mr. Pope had mentioned only as a foil to a better poet. On this occasion, it was natural not to be pleased, and my resentment seeking to discharge itself some where, was unhappily directed against Milton. I resolved to attack his fame, and found some passages in cursory reading, which gave me hopes of stigmatising him as a plagiarist. The farther I carried my search, the more eager I grew for the discovery, and the more my hypothesis was opposed, the more I was heated with rage. The consequence of my blind passion, I need not relate, it has, by your detection, become apparent to mankind. Nor do I mention this provocation as adequate to the fury which I have shown, but as a cause of anger, less shameful and reproachful than fractious malice, personal envy, or national jealousy.

Milton, and afterwards by a great passion for Arthur Johnstou, a Scots physician's version of the psalms, of which he printed many fine editions. *Notes on the Dunciad*

No fewer than six different editions of that useful and valuable book, two in quarto, two in octavo, and two in a lesser form, now lie like lumber in the hand of Mr. Vaillant, bookseller, the effects of Mr. Pope's ill-natured criticism.

One of these editions in quarto, illustrated with an interpretation and notes, after the manner of the classic authors in *usum Delphicum*, was by the worthy editor, anno 1741, inscribed to his Royal Highness Prince George, as a proper book for his instruction in principles of piety, as well as knowledge of the Latin tongue, when he should arrive at due maturity of age. To restore this book to credit was the cause that induced me to engage in this disagreeable controversy, rather than any design to depreciate the just reputation of Milton.

But for the violation of truth, I offer no excuse, because I well know, that nothing can excuse it. Nor will I aggravate my crime, by disingenuous palliations. I confess it, I repent it, and resolve, that my first offence shall be my last. More I cannot perform, and more therefore cannot be required. I intreat the pardon of all men, whom I have by any means induced to support, to countenance, or patronise my frauds, of which I think myself obliged to declare, that not one of my friends was conscious. I hope to deserve, by better conduct and more useful undertakings, that patronage which I have obtained from the most illustrious and venerable names by misrepresentation and delusion, and to appear hereafter in such a character, as shall give you no reason to regret that your name is frequently mentioned with that of,

Reverend Sir,

Your most humble servant,

WILLIAM LAUDER

Dec 20, 1750

REVIEW
OF A
FREE ENQUIRY
INTO THE
NATURE AND ORIGIN OF EVIL.

THIS is a treatise consisting of six letters upon a very difficult and important question, which I am afraid this author's endeavours will not free from the perplexity, which has entangled the speculatists of all ages, and which must always continue while *we see but in part*. He calls it a *Free Enquiry*, and indeed his *freedom* is, I think, greater than his modesty. Though he is far from the contemptible arrogance, or the impious licentiousness of Bolingbroke, yet he decides too easily upon questions out of the reach of human determination, with too little consideration of mortal weakness, and with too much vivacity for the necessary caution.

In the first letter *on Evil in general*, he observes, that, "it is the solution of this important question, *whence came Evil*, alone, that can ascertain the moral characteristick of God, without which there is an end of all distinction between Good and Evil." Yet he begins this Enquiry by this declaration. "That there is a Supreme Being, in-

finitely powerful, wise, and benevolent, the great Creator and Preserver of all things, is a truth so clearly demonstrated, that it shall be here taken for granted" What is this but to say, that we have already reason to grant the existence of those attributes of God, which the present Enquiry is designed to prove? The present Enquiry is then surely made to no purpose. The attributes to the demonstration of which the solution of this great question is necessary, have been demonstrated without any solution, or by means of the solution of some former writer.

He rejects the Manichean system, but imputes to it an absurdity, from which, amidst all its absurdities, it seems to be free, and adopts the system of Mr. Pope. "That pain is no evil, if asserted with regard to the individuals who suffer it, is downright nonsense; but if considered as it affects the universal system, is an undoubted truth, and means only that there is no more pain in it than what is necessary to the production of happiness. How many soever of these evils then force themselves into the creation, so long as the good preponderates, it is a work well worthy of infinite wisdom and benevolence, and, notwithstanding the imperfections of its parts, the whole is most undoubtedly perfect." And in the former part of the letter, he gives the principle of his system in these words. "Omnipotence cannot work contradictions, it can only effect all possible things But so little are we acquainted with the whole system of nature, that we know not what are possible, and what are not. but if we may judge

from that constant mixture of pain with pleasure, and inconveniency with advantage, which we must observe in every thing round us, we have reason to conclude, that to endue created beings with perfection, that is, to produce Good exclusive of Evil, is one of those impossibilities which even infinite power cannot accomplish."

This is elegant and acute, but will by no means calm discontent, or silence curiosity; for whether Evil can be wholly separated from Good or not, it is plain that they may be mixed in various degrees, and as far as human eyes can judge, the degree of Evil might have been less without any impediment to Good

The second letter *on the evils of imperfection*, is little more than a paraphrase of Pope's Epistles, or yet less than a paraphrase, a mere translation of poetry into prose. This is surely to attack difficulty with very disproportionate abilities, to cut the Gordian knot with very blunt instruments. When we are told of the insufficiency of former solutions, why is one of the latest, which no man can have forgotten, given us again? I am told, that this pamphlet is not the effort of hunger: what can it be then but the product of vanity? and yet how can vanity be gratified by plagiarism, or transcription? When this speculatist finds himself prompted to another performance, let him consider whether he is about to disburthen his mind, or employ his fingers, and if I might venture to offer him a subject, I should wish that he would solve this question, Why he that has nothing to write, should desire to be a writer?

Yet is not this letter without some sentiments, which, though not new, are of great importance, and may be read with pleasure in the thousandth repetition

“Whatever we enjoy is purely a free gift from our Creator, but that we enjoy no more, can never sure be deemed an injury, or a just reason to question his infinite benevolence. All our happiness is owing to his goodness; but that it is no greater, is owing only to ourselves; that is, to our not having any inherent right to any happiness, or even to any existence at all. This is no more to be imputed to God, than the wants of a beggar to the person who has relieved him: that he had something, was owing to his benefactor, but that he had no more, only to his own original poverty.”

Thus far he speaks what every man must approve, and what every wise man has said before him. He then gives us the system of subordination, not invented, for it was known I think to the Arabian metaphysicians, but adopted by Pope; and from him borrowed by the diligent researchers of this great investigator.

“No system can possibly be formed, even in imagination, without a subordination of parts. Every animal body must have different members subservient to each other, every picture must be composed of various colours, and of light and shade, all harmony must be formed of trebles, tenors, and basses, every beautiful and useful edifice must consist of higher and lower, more and less magnificent apartments. This is in the very

“ It would have been no more an instance of God’s wisdom to have created no beings but of the highest and most perfect order, than it would be of a painter’s art to cover his whole piece with one single colour, the most beautiful he could compose. Had he confined himself to such, nothing could have existed but demi-gods, or arch-angels, and then all inferior orders must have been void and uninhabited. but as it is surely more agreeable to infinite Benevolence, that all these should be filled up with beings capable of enjoying happiness themselves, and contributing to that of others, they must necessarily be filled with inferior beings, that is, with such as are less perfect, but from whose existence, notwithstanding that less perfection, more felicity upon the whole accrues to the universe, than if no such had been created. It is moreover highly probable, that there is such a connexion between all ranks and orders by subordinate degrees, that they mutually support each other’s existence, and every one in its place is absolutely necessary towards sustaining the whole vast and magnificent fabrick.

“ Our pretences for complaint could be of this only, that we are not so high in the scale of existence as our ignorant ambition may desire, a pretence which must eternally subsist, because, were we ever so much higher, there would be still room for infinite power to exalt us, and since no link in the chain can be broke, the same reason for disquiet must remain to those who succeed to that chasm, which must be occasioned by our preferment. A man can have no reason to repine that he is not an angel, nor a horse that he is not a

man, much less, that in their several stations they possess not the faculties of another; for this would be an insufferable misfortune."

This doctrine of the regular subordination of beings, the scale of existence, and the chain of nature, I have often considered, but always left the inquiry in doubt and uncertainty.

That every being not infinite, compared with infinity, must be imperfect, is evident to intuition, that whatever is imperfect must have a certain line which it cannot pass, is equally certain. But the reason which determined this limit, and for which such being was suffered to advance thus far and no farther, we shall never be able to discern. Our discoverers tell us, the Creator has made beings of all orders, and that therefore one of them must be such as man. But this system seems to be established on a concession, which, if it be refused, cannot be extorted.

Every reason which can be brought to prove, that there are beings of every possible sort, will prove that there is the greatest number possible of every sort of beings; but this with respect to man we know, if we know any thing, not to be true.

It does not appear even to the imagination, that of three orders of being, the first and the third receive any advantage from the imperfection of the second, or that indeed they may not equally exist, though the second had never been, or should cease to be, and why should that be concluded necessary, which cannot be proved even to be useful?

The scale of existence from infinity to nothing,

cannot possibly have being. The highest being not infinite must be, as has been often observed, at an infinite distance below infinity. Cheyne, who, with the desire inherent in mathematicians to reduce every thing to mathematical images, considers all existence as a *cone*, allows that the basis is at an infinite distance from the body. And in this distance between finite and infinite, there will be room for ever for an infinite series of indefinable existence.

Between the lowest positive existence and nothing, wherever we suppose positive existence to cease, is another chasm infinitely deep, where there is room again for endless orders of subordinate nature, continued for ever and for ever, and yet infinitely superior to non-existence.

To these meditations humanity is unequal. But yet we may ask, not of our Maker, but of each other, since on the one side creation, wherever it stops, must stop infinitely below infinity, and on the other infinitely above nothing, what necessity there is that it should proceed so far either way, that beings so high or so low should ever have existed? We may ask, but I believe no created wisdom can give an adequate answer.

Nor is this all. In the scale, wherever it begins or ends, are infinite vacuities. At whatever distance we suppose the next order of beings to be above man, there is room for an intermediate order of beings between them; and if for one order, then for infinite orders, since every thing that admits of more or less, and consequently all the parts of that which admits them, may be infinitely divided. So

that, as far as we can judge, there may be room in the vacuity between any two steps of the scale, or between any two points of the cone of being for infinite exertion of infinite power.

Thus it appears how little reason those who repose their reason upon the scale of being have to triumph over them who recur to any other expedient of solution, and what difficulties arise on every side to repress the rebellions of presumptuous decision *Qui pauca considerat, facile pronunciat* In our passage through the boundless ocean of disquisition we often take fogs for land, and after having long toiled to approach them, find, instead of repose and harbours, new storms of objection, and fluctuations of uncertainty

We are next entertained with Pope's alleviations of those evils which we are doomed to suffer.

“Poverty, or the want of riches, is generally compensated by having more hopes, and fewer fears, by a greater share of health, and a more exquisite relish of the smallest enjoyments, than those who possess them are usually blessed with. The want of taste and genius, with all the pleasures that arise from them, are commonly recompensed by a more useful kind of common sense, together with a wonderful delight, as well as success, in the busy pursuits of a scrambling world. The sufferings of the sick are greatly relieved by many trifling gratifications imperceptible to others, and sometimes almost repaid by the inconceivable transports occasioned by the return of health and vigour. Folly cannot be very grievous, because imperceptible; and I doubt not

but there is some truth in that rant of a mad poet, that there is a pleasure in being mad, which none but madmen know. Ignorance, or the want of knowledge and literature, the appointed lot of all born to poverty and the drudgeries of life, is the only opiate capable of infusing that insensibility which can enable them to endure the miseries of the one and the fatigues of the other. It is a cordial administered by the gracious hand of Providence; of which they ought never to be deprived by an ill-judged and improper education. It is the basis of all subordination, the support of society, and the privilege of individuals and I have ever thought it a most remarkable instance of the divine wisdom, that whereas in all animals, whose individuals rise little above the rest of their species, knowledge is instinctive, in man, whose individuals are so widely different, it is acquired by education; by which means the prince and the labourer, the philosopher and the peasant, are in some measure fitted for their respective situations."

Much of these positions is perhaps true, and the whole paragraph might well pass without censure, were not objections necessary to the establishment of knowledge. *Poverty* is very gently paraphrased by *want of riches*. In that sense almost every man may in his own opinion be poor. But there is another poverty, which is *want of competence*, of all that can soften the miseries of life, of all that can diversify attention, or delight imagination. There is yet another poverty, which is *want of necessaries*, a species of poverty which no care of the publick, no

charity of particulars, can preserve many from feeling openly, and many secretly.

That hope and fear are inseparably or very frequently connected with poverty and riches, my surveys of life have not informed me. The milder degrees of poverty are sometimes supported by hope, but the more severe often sink down in motionless despondence. Life must be seen before it can be known. This author and Pope perhaps never saw the miseries which they imagine thus easy to be borne. The poor indeed are insensible of many little vexations which sometimes embitter the possessions and pollute the enjoyments of the rich. They are not pained by casual incivility, or mortified by the mutilation of a compliment; but this happiness is like that of a malefactor, who ceases to feel the cords that bind him when the pincers are tearing his flesh.

That want of taste for one enjoyment is supplied by the pleasures of some other, may be fairly allowed. But the compensations of sickness I have never found near to equivalence, and the transports of recovery only prove the intenseness of the pain.

With folly no man is willing to confess himself very intimately acquainted, and therefore its pains and pleasures are kept secret. But what the author says of its happiness seems applicable only to fatuity, or gross dulness; for that inferiority of understanding which makes one man without any other reason the slave, or tool, or property of another, which makes him sometimes useless, and sometimes ridiculous, is often felt with very quick sensibility. On the happiness of madmen, as the

case is not very frequent, it is not necessary to raise a disquisition; but I cannot forbear to observe, that I never yet knew disorders of mind increase felicity: every madman is either arrogant and irascible, or gloomy and suspicious, or possessed by some passion or notion destructive to his quiet. He has always discontent in his look, and malignity in his bosom. And, if he had the power of choice, he would soon repent who should resign his reason to secure his peace.

Concerning the portion of ignorance necessary to make the condition of the lower classes of mankind safe to the publick and tolerable to themselves, both morals and policy exact a nicer inquiry than will be very soon or very easily made. There is undoubtedly a degree of knowledge which will direct a man to refer all to Providence, and to acquiesce in the condition with which Omniscient Goodness has determined to allot him, to consider this world as a phantom that must soon glide from before his eyes, and the distresses and vexations that encompass him, as dust scattered in his path, as a blast that chills him for a moment, and passes off for ever.

Such wisdom, arising from the comparison of a part with the whole of our existence, those that want it most cannot possibly obtain from philosophy; nor unless the method of education, and the general tenour of life are changed, will very easily receive it from religion. The bulk of mankind is not likely to be very wise or very good and I know not whether there are not many states of life, in which all knowledge, less than the highest wis-

dom, will produce discontent and danger. I believe it may be sometimes found, that a *little learning* is to a poor man a *dangerous thing*. But such is the condition of humanity; that we easily see, or quickly feel the wrong, but cannot always distinguish the right. Whatever knowledge is superfluous, in irremediable poverty, is hurtful; but the difficulty is to determine when poverty is irremediable, and at what point superfluity begins. Gross ignorance every man has found equally dangerous with perverted knowledge. Men left wholly to their appetites and their instincts, with little sense of moral or religious obligation, and with very faint distinctions of right and wrong, can never be safely employed, or confidently trusted: they can be honest only by obstinacy, and diligent only by compulsion or caprice. Some instruction, therefore, is necessary, and much perhaps may be dangerous.

Though it should be granted that those who are *born to poverty and drudgery* should not be deprived by an *improper education* of the opiate of ignorance, even this concession will not be of much use to direct our practice, unless it be determined who are those that are *born to poverty*. To entail irreversible poverty upon generation after generation, only because the ancestor happened to be poor, is in itself cruel, if not unjust, and is wholly contrary to the maxims of a commercial nation, which always suppose and promote a rotation of property, and offer every individual a chance of mending his condition by his diligence. Those who communicate literature to the son of a poor man, consider

him as one not born to poverty, but to the necessity of deriving a better fortune from himself. In this attempt, as in others, many fail, and many succeed. Those that fail will feel their misery more acutely; but since poverty is now confessed to be such a calamity as cannot be borne without the opiate of insensibility, I hope the happiness of those whom education enables to escape from it, may turn the balance against that exacerbation which the others suffer.

I am always afraid of determining on the side of envy or cruelty. The privileges of education may sometimes be improperly bestowed, but I shall always fear to withhold them, lest I should be yielding to the suggestions of pride, while I persuade myself that I am following the maxims of policy; and under the appearance of salutary restraints, should be indulging the lust of dominion, and that malevolence which delights in seeing others depressed.

Pope's doctrine is at last exhibited in a comparison, which, like other proofs of the same kind, is better adapted to delight the fancy than convince the reason.

"Thus the universe resembles a large and well-regulated family, in which all the officers and servants, and even the domestick animals, are subservient to each other in a proper subordination. each enjoys the privileges and perquisites peculiar to his place, and at the same time contributes by that just subordination to the magnificence and happiness of the whole"

The magnificence of a house is of use or plea-

sure always to the master, and sometimes to the domesticks But the magnificence of the universe adds nothing to the Supreme Being; for any part of its inhabitants with which human knowledge is acquainted, an universe much less spacious or splendid would have been sufficient; and of happiness it does not appear that any is communicated from the beings of a lower world to those of a higher.

The Enquiry after the cause of *natural Evil* is continued in the third Letter, in which, as in the former, there is mixture of borrowed truth, and native folly, of some notions just and trite, with others uncommon and ridiculous

His opinion of the value and importance of happiness is certainly just, and I shall insert it, not that it will give any information to any reader, but it may serve to show how the most common notion may be swelled in sound, and diffused in bulk, till it shall perhaps astonish the author himself

“Happiness is the only thing of real value in existence, neither riches, nor power, nor wisdom, nor learning, nor strength, nor beauty, nor virtue, nor religion, nor even life itself, being of any importance, but as they contribute to its production All these are in themselves neither good nor evil. happiness alone is their great end, and they are desirable only as they tend to promote it”

Success produces confidence. After this discovery of the value of happiness, he proceeds without any distrust of himself, to tell us what has been hid from all former inquirers

“The true solution of this important question, so long and so vainly searched for by the philoso-

phers of all ages and all countries, I take to be at last no more than this, that these real evils proceed from the same source as those imaginary ones of imperfection before treated of, namely, from that subordination, without which no created system can subsist, all subordination implying imperfection, all imperfection Evil, and all Evil some kind of inconveniency or suffering · so that there must be particular inconveniencies and suffering annexed to every particular rank of created beings by the circumstances of things, and then modes of existence.

“ God indeed might have made us quite other creatures, and placed us in a world quite differently constituted ; but then we had been no longer men, and whatever beings had occupied our stations in the universal system, they must have been liable to the same inconveniencies.”

In all this there is nothing that can silence the inquiries of curiosity, or calm the perturbations of doubt Whether subordination implies imperfection may be disputed. The means respecting themselves may be as perfect as the end. The weed as a weed is no less perfect than the oak as an oak That *imperfection implies Evil, and Evil suffering*, is by no means evident Imperfection may imply privative Evil, or the absence of some good, but this privation produces no suffering, but by the help of knowledge An infant at the breast is yet an imperfect man, but there is no reason for belief that he is unhappy by his immaturity, unless some positive pain be superadded.

When this author presumes to speak of the universe, I would advise him a little to distrust his own

faculties, however large and comprehensive. Many words easily understood on common occasion, become uncertain and figurative when applied to the works of Omnipotence. Subordination in human affairs is well understood; but when it is attributed to the universal system, its meaning grows less certain, like the petty distinctions of locality, which are of good use upon our own globe, but have no meaning with regard to infinite space, in which nothing is *high* or *low*.

That if man, by exaltation to a higher nature, were exempted from the evils which he now suffers, some other being must suffer them, that if man were not man, some other being must be man, is a position arising from his established notion of the scale of being. A notion to which Pope has given some importance by adopting it, and of which I have therefore endeavoured to show the uncertainty and inconsistency. This scale of being I have demonstrated to be raised by presumptuous imagination, to rest on nothing at the bottom, to lean on nothing at the top, and to have vacuities from step to step through which any order of being may sink into nihility without any inconvenience, so far as we can judge, to the next rank above or below it. We are therefore little enlightened by a writer who tells us, that any being in the state of man must suffer what man suffers, when the only question that requires to be resolved is, Why any being is in this state?

Of poverty and labour he gives just and elegant representations, which yet do not remove the difficulty of the first and fundamental question, though

supposing the present state of man necessary, they may supply some motives to content

“Poverty is what all could not possibly have been exempted from, not only by reason of the fluctuating nature of human possessions, but because the world could not subsist without it; for had all been rich, none could have submitted to the commands of another, or the necessary drudgeries of life, thence all governments must have been dissolved, arts neglected, and lands uncultivated, and so an universal penury have overwhelmed all, instead of now and then pinching a few. Hence, by the by, appears the great excellence of charity, by which men are enabled by a particular distribution of the blessings and enjoyments of life, on proper occasions, to prevent that poverty which by a general one Omnipotence itself could never have prevented so that, by enforcing this duty, God as it were demands our assistance to promote universal happiness, and to shut out misery at every door, where it strives to intrude itself.

“Labour, indeed, God might easily have excused us from, since at his command the earth would readily have poured forth all her treasures without our inconsiderable assistance. but if the severest labour cannot sufficiently subdue the malignity of human nature, what plots and machinations, what wars, rapine and devastation, what profligacy and licentiousness, must have been the consequences of universal idleness! so that labour ought only to be looked upon as a task kindly imposed upon us by our indulgent Creator, ne-

cessary to preserve our health, our safety, and our innocence”

I am afraid that *the latter end of his commonwealth forgets the beginning*. If God could easily have excused us from labour, I do not comprehend why he could not possibly have exempted all from poverty. For poverty, in its easier and more tolerable degree, is little more than necessity of labour; and in its more severe and deplorable state, little more than inability for labour. To be poor is to work for others, or to want the succour of others without work. And the same exuberant fertility which would make work unnecessary, might make poverty impossible.

Surely a man who seems not completely master of his own opinion, should have spoken more cautiously of Omnipotence, nor have presumed to say what it could perform, or what it could prevent. I am in doubt whether those who stand highest in *the scale of being* speak thus confidently of the dispensations of their Maker:

For fools rush in, where angels fear to tread

Of our inquietudes of mind his account is still less reasonable. “Whilst men are injured, they must be inflamed with anger; and whilst they see cruelties, they must be melted with pity, whilst they perceive danger, they must be sensible of fear.” This is to give a reason for all Evil, by showing that one Evil produces another. If there is danger there ought to be fear; but if fear is an Evil, why should there be danger? His vindication of pain is of the same kind: pain is useful to alarm us, that we may shun

greater evils, but those greater evils must be presupposed, that the fitness of pain may appear.

Treating on death, he has expressed the known and true doctrine with sprightliness of fancy, and neatness of diction I shall therefore insert it There are truths which, as they are always necessary, do not grow stale by repetition.

“ Death, the last and most dreadful of all Evils, is so far from being one, that it is the infallible cure for all others

To die, is landing on some silent shore,
Where billows never beat, nor tempests roar
Ere well we feel the friendly stroke, 'tis o'er GARTH

For, abstracted from the sickness and sufferings usually attending it, it is no more than the expiration of that term of life God was pleased to bestow on us, without any claim or merit on our part. But was it an Evil ever so great, it could not be remedied but by one much greater, which is by living for ever; by which means our wickedness, unrestrained by the prospect of a future state, would grow so insupportable, our sufferings so intolerable by perseverance, and our pleasures so tiresome by repetition, that no being in the universe could be so completely miserable as a species of immortal men We have no reason, therefore, to look upon death as an Evil, or to fear it as a punishment, even without any supposition of a future life, but if we consider it as a passage to a more perfect state, or a remove only in an eternal succession of still-improving states (for which we

have the strongest reasons) it will then appear a new favour from the divine munificence; and a man must be as absurd to repine at dying, as a traveller would be, who proposed to himself a delightful tour through various unknown countries, to lament that he cannot take up his residence at the first dirty inn which he meets at on the road.

The instability of human life, or of the changes of its successive periods, of which we so frequently complain, are no more than the necessary progress of it to this necessary conclusion; and are so far from being Evils deserving these complaints, that they are the source of our greatest pleasures, as they are the source of all novelty, from which our greatest pleasures are ever derived. The continual succession of seasons in the human life, by daily presenting to us new scenes, render it agreeable, and, like those of the year, afford us delights by their change, which the choicest of them could not give us by their continuance. In the spring of life, the gilding of the sunshine, the verdure of the fields, and the variegated paintings of the sky, are so exquisite in the eyes of infants at their first looking abroad into a new world, as nothing perhaps afterwards can equal. The heat and vigour of the succeeding summer of youth ripens for us new pleasures, the blooming maid, the nightly revel, and the jovial chace: the serene autumn of complete manhood feasts us with the golden harvests of our worldly pursuits: nor is the hoary winter of old age destitute of its peculiar comforts and enjoyments of which the recollection and relation of

those past are perhaps none of the least; and at last death opens to us a new prospect, from whence we shall probably look back upon the diversions and occupations of this world with the same contempt we do now on our tops and hobby-horses, and with the same surprise that they could ever so much entertain or engage us."

I would not willingly detract from the beauty of this paragraph; and in gratitude to him who has so well inculcated such important truths, I will venture to admonish him, since the chief comfort of the old is the recollection of the past, so to employ his time and his thoughts, that when the imbecility of age shall come upon him, he may be able to recreate its languors by the remembrance of hours spent, not in presumptuous derisions, but modest inquiries, not in dogmatical limitations of Omnipotence, but in humble acquiescence and fervent adoration. Old age will show him that much of the book now before us has no other use than to perplex the scrupulous, and to shake the weak, to encourage impious presumption, or stimulate idle curiosity.

Having thus despatched the consideration of particular evils, he comes at last to a general reason for which *Evil* may be said to be *our Good*. He is of opinion that there is some inconceivable benefit in pain abstractedly considered; that pain however inflicted, or wherever felt, communicates some good to the general system of being, and that every animal is some way or other the better for the pain of every other animal. This opinion he carries

so far as to suppose that there passes some principle of union through all animal life, as attraction is communicated to all corporeal nature, and that the Evils suffered on this globe, may by some inconceivable means contribute to the felicity of the inhabitants of the remotest planet.

How the Origin of Evil is brought nearer to human conception by any *inconceivable* means, I am not able to discover. We believed that the present system of creation was right, though we could not explain the adaptation of one part to the other, or for the whole succession of causes and consequences. Where has this inquirer added to the little knowledge that we had before? He has told us of the benefits of Evil, which no man feels, and relations between distant parts of the universe, which he cannot himself conceive. There was enough in this question inconceivable before, and we have little advantage from a new inconceivable solution.

I do not mean to reproach this author for not knowing what is equally hidden from learning and from ignorance. The shame is to impose words for ideas upon ourselves or others. To imagine that we are going forward when we are only turning round. To think that there is any difference between him that gives no reason, and him that gives a reason, which by his own confession cannot be conceived.

But that he may not be thought to conceive nothing but things inconceivable, he has at last thought on a way by which human sufferings may produce good effects. He imagines that as we have

not only animals for food, but choose some for our diversion, the same privilege may be allowed to some beings above us, *who may deceive, torment, or destroy us for the ends only of their own pleasure or utility.* This he again finds impossible to be conceived, *but that impossibility lessens not the probability of the conjecture, which by analogy is so strongly confirmed.*

I cannot resist the temptation of contemplating this analogy, which I think he might have carried further, very much to the advantage of his argument. He might have shown that these *hunters whose game is man* have many sports analogous to our own. As we drown whelps and kittens, they amuse themselves now and then with sinking a ship, and stand round the fields of Blenheim or the walls of Prague, as we encircle a cock-pit. As we shoot a bird flying, they take a man in the midst of his business or pleasure, and knock him down with an apoplexy. Some of them, perhaps, are virtuosos, and delight in the operations of an asthma, as a human philosopher in the effects of the air pump. To swell a man with a tympany is as good sport as to blow a frog. Many a merry bout have these frolick beings at the vicissitudes of an ague, and good sport it is to see a man tumble with an epilepsy, and revive and tumble again, and all this he knows not why. As they are wiser and more powerful than we, they have more exquisite diversions, for we have no way of procuring any sport so brisk and so lasting, as the paroxysms of the gout and stone, which undoubtedly must make high mirth, especially if the play be a little diver-

sified with the blunders and puzzles of the blind and deaf. We know not how far their sphere of observation may extend. Perhaps now and then a merry being may place himself in such a situation as to enjoy at once all the varieties of an epidemical disease, or amuse his leisure with the tossings and contortions of every possible pain exhibited together.

One sport the merry malice of these beings has found means of enjoying to which we have nothing equal or similar. They now and then catch a mortal proud of his parts, and flattered either by the submission of those who court his kindness, or the notice of those who suffer him to court theirs. A head thus prepared for the reception of false opinions, and the projection of vain designs, they easily fill with idle notions till in time they make their plaything an author. their first diversion commonly begins with an ode or an epistle, then rises perhaps to a political irony, and is at last brought to its height, by a treatise of philosophy. Then begins the poor animal to entangle himself in sophisms, and flounder in absurdity, to talk confidently of the scale of being, and to give solutions which himself confesses impossible to be understood. Sometimes, however, it happens that their pleasure is without much mischief. The author feels no pain, but while they are wondering at the extravagance of his opinion, and pointing him out to one another as a new example of human folly, he is enjoying his own applause, and that of his companions, and perhaps is elevated with the hope of standing at the head of a new sect.

Many of the books which now crowd the world, may be justly suspected to be written for the sake of some invisible order of beings, for surely they are of no use to any of the corporeal inhabitants of the world. Of the productions of the last bounteous year, how many can be said to serve any purpose of use or pleasure? The only end of writing is to enable the readers better to enjoy life, or better to endure it: and how will either of those be put more in our power by him who tells us, that we are puppets, of which some creature not much wiser than ourselves manages the wires. That a set of beings, unseen and unheard, are hovering about us, trying experiments upon our sensibility, putting us in agonies to see our limbs quiver, torturing us to madness, that they may laugh at our vagaries, sometimes obstructing the bile, that they may see how a man looks when he is yellow, sometimes breaking a traveller's bones to try how he will get home; sometimes wasting a man to a skeleton, and sometimes killing him fat for the greater elegance of his hide

This is an account of natural Evil, which though, like the rest, not quite new, is very entertaining, though I know not how much it may contribute to patience. The only reason why we should contemplate Evil is, that we may bear it better; and I am afraid nothing is much more placidly endured, for the sake of making others sport

The first pages of the fourth Letter are such as incline me both to hope and wish that I shall find nothing to blame in the succeeding part. He offers

a criterion of action, on account of virtue and vice, for which I have often contended, and which must be embraced by all who are willing to know why they act, or why they forbear to give any reason of their conduct to themselves or others

“ In order to find out the true Origin of moral Evil, it will be necessary, in the first place, to inquire into its nature and essence; or what it is that constitutes one action evil and another good. Various have been the opinions of various authors on this criterion of virtue, and this variety has rendered that doubtful, which must otherwise have been clear and manifest to the meanest capacity. Some indeed have denied that there is any such thing, because different ages and nations have entertained different sentiments concerning it. but this is just as reasonable as to assert, that there are neither sun, moon, nor stars, because astronomers have supported different systems of the motions and magnitudes of these celestial bodies. Some have placed it in conformity to truth, some to the fitness of things, and others to the will of God. But all this is merely superficial. they resolve us not why truth, or the fitness of things, are either eligible or obligatory, or why God should require us to act in one manner rather than another. The true reason of which can possibly be no other than this, because some actions produce happiness, and others misery: so that all moral Good and Evil are nothing more than the production of natural. This alone it is that makes truth preferable to falsehood, this that determines the fitness of things, and this

that induces God to command some actions, and forbid others. They who extol the truth, beauty, and harmony of virtue, exclusive of its consequences, deal but in pompous nonsense, and they who would persuade us, that Good and Evil are things indifferent, depending wholly on the will of God, do but confound the nature of things, as well as all our notions of God himself, by representing him capable of willing contradictions, that is, that we should be, and be happy, and at the same time that we should torment and destroy each other; for injuries cannot be made benefits, pain cannot be made pleasure, and consequently vice cannot be made virtue by any power whatever. It is the consequences, therefore, of all human actions that must stamp their value. So far as the general practice of any action tends to produce good, and introduce happiness into the world, so far we may pronounce it virtuous, so much Evil as it occasions, such is the degree of vice it contains. I say the general practice, because we must always remember, in judging by this rule, to apply it only to the general species of actions, and not to particular actions, for the infinite wisdom of God, desirous to set bounds to the destructive consequences which must otherwise have followed from the universal depravity of mankind, has so wonderfully contrived the nature of things, that our most vicious actions may sometimes accidentally and collaterally produce good. Thus, for instance, robbery may disperse useless hoards to the benefit of the publick; adultery may bring heirs and good humour too

into many families, where they would otherwise have been wanting, and murder free the world from tyrants and oppressors. Luxury maintains its thousands, and vanity its ten thousands. Superstition and arbitrary power contribute to the grandeur of many nations, and the liberties of others are preserved by the perpetual contentions of avarice, knavery, selfishness, and ambition; and thus the worst of vices, and the worst of men, are often compelled by Providence to serve the most beneficial purposes, contrary to their own malevolent tendencies and inclinations; and thus private vices become publick benefits, by the force only of accidental circumstances. But this impeaches not the truth of the criterion of virtue before mentioned, the only solid foundation on which any true system of ethics can be built, the only plain, simple, and uniform rule by which we can pass any judgment on our actions; but by this we may be enabled, not only to determine which are Good, and which are Evil, but almost mathematically to demonstrate the proportion of virtue or vice which belongs to each, by comparing them with the degrees of happiness or misery which they occasion. But though the production of happiness is the essence of virtue, it is by no means the end, the great end is the probation of mankind, or the giving them an opportunity of exalting or degrading themselves in another state by their behaviour in the present. And thus indeed it answers two most important purposes; those are, the conservation of our happiness, and the test of our obedience; for had not such a

test seemed necessary to God's infinite wisdom, and productive of universal good, he would never have permitted the happiness of men, even in this life, to have depended on so precarious a tenure, as their mutual good behaviour to each other. For it is observable, that he who best knows our formation, has trusted no one thing of importance to our reason or virtue. he trusts only to our appetites for the support of the individual, and the continuance of our species, to our vanity or compassion, for our bounty to others, and to our fears, for the preservation of ourselves; often to our vices for the support of government, and sometimes to our follies for the preservation of our religion. But since some test of our obedience was necessary, nothing sure could have been commanded for that end so fit and proper, and at the same time so useful, as the practice of virtue. nothing could have been so justly rewarded with happiness, as the production of happiness in conformity to the will of God. It is this conformity alone which adds merit to virtue, and constitutes the essential difference between morality and religion. Morality obliges men to live honestly and soberly, because such behaviour is most conducive to publick happiness, and consequently to their own, religion, to pursue the same course, because conformable to the will of their Creator. Morality induces them to embrace virtue from prudential considerations, religion from those of gratitude and obedience. Morality therefore, entirely abstracted from religion, can have nothing meritorious in it, it being but wisdom, prudence,

or good economy, which, like health, beauty, or riches, are rather obligations conferred upon us by God, than merits in us towards him, for though we may be justly punished for injuring ourselves, we can claim no reward for self-preservation, as suicide deserves punishment and infamy, but a man deserves no reward or honours for not being guilty of it. This I take to be the meaning of all those passages in our Scriptures, in which works are represented to have no merit without faith; that is, not without believing in historical facts, in creeds, and articles, but without being done in pursuance of our belief in God, and in obedience to his commands. And now, having mentioned Scripture, I cannot omit observing, that the Christian is the only religious or moral institution in the world that ever set in a right light these two material points, the essence and the end of virtue, that ever founded the one in the production of happiness, that is, in universal benevolence, or, in their language, charity to all men, the other, in the probation of man, and his obedience to his Creator Sublime and magnificent as was the philosophy of the ancients, all their moral systems were deficient in these two important articles. They were all built on the sandy foundations of the innate beauty of virtue, or enthusiastick patriotism, and their great point in view was the contemptible reward of human glory; foundations which were by no means able to support the magnificent structures which they erected upon them, for the beauty of virtue, independent of its effects, is unmeaning non-

sense, patriotism, which injures mankind in general for the sake of a particular country, is but a more extended selfishness, and really criminal. and all human glory but a mean and ridiculous delusion. The whole affair then of religion and morality, the subject of so many thousand volumes, is, in short, no more than this the Supreme Being, infinitely good, as well as powerful, desirous to diffuse happiness by all possible means, has created innumerable ranks and orders of beings, all subservient to each other by proper subordination. One of these is occupied by man, a creature endued with such a certain degree of knowledge, reason, and free-will, as is suitable to his situation, and placed for a time on this globe as in a school of probation and education. Here he has an opportunity given him of improving or debasing his nature, in such a manner as to render himself fit for a rank of higher perfection and happiness, or to degrade himself to a state of greater imperfection and misery; necessary indeed towards carrying on the business of the universe, but very grievous and burthensome to those individuals, who, by their own misconduct, are obliged to submit to it. The test of this his behaviour, is doing good, that is, co-operating with his Creator, as far as his narrow sphere of action will permit, in the production of happiness. And thus the happiness and misery of a future state will be the just reward or punishment of promoting or preventing happiness in this. So artificially by this means is the nature of all human virtue and vice contrived, that their rewards

and punishments are woven as it were in their very essence; their immediate effects give us a foretaste of their future, and their fruits in the present life are the proper samples of what they must unavoidably produce in another. We have reason given us to distinguish these consequences, and regulate our conduct, and, lest that should neglect its post, conscience also is appointed as an instinctive kind of monitor, perpetually to remind us both of our interest and our duty."

Si sic omnia dixeret! To this account of the essence of vice and virtue, it is only necessary to add, that the consequences of human actions being sometimes uncertain, and sometimes remote, it is not possible in many cases for most men, nor in all cases for any man to determine what actions will ultimately produce happiness, and therefore it was proper that *revelation* should lay down a rule to be followed invariably in opposition to appearances, and in every change of circumstances, by which we may be certain to promote the general felicity, and be set free from the dangerous temptation of *doing Evil that Good may come*.

Because it may easily happen, and in effect will happen very frequently, that our own private happiness may be promoted by an act injurious to others, when yet no man can be obliged by nature to prefer ultimately the happiness of others to his own, therefore, to the instructions of infinite wisdom it was necessary that infinite power should add penal sanctions. That every man to whom those instructions shall be imparted may know, that he

can never ultimately injure himself by benefiting others, or ultimately by injuring others benefit himself, but that, however the lot of the good and bad may be huddled together in the seeming confusion of our present state, the time shall undoubtedly come, when the most virtuous will be most happy

I am sorry that the remaining part of this Letter is not equal to the first. The author has indeed engaged in a disquisition in which we need not wonder if he fails, in the solution of questions on which philosophers have employed their abilities from the earliest times,

And found no end, in wand'ring mazes lost.

He denies that man was created *perfect*, because the system requires subordination, and because the power of losing his perfection, of *rendering himself wicked and miserable, is the highest imperfection imaginable* Besides, the regular gradations of the scale of being required somewhere *such a creature as man, with all his infirmities about him, and the total removal of those would be altering his nature, and when he became perfect he must cease to be man.*

I have already spent some considerations on the *scale of being*, of which yet I am obliged to renew the mention whenever a new argument is made to rest upon it, and I must therefore again remark, that consequences cannot have greater certainty than the postulate from which they are drawn, and that no system can be more hypothetical than this, and perhaps no hypothesis more absurd

He again deceives himself with respect to the perfection with which *man* is held to be originally vested. *That man came perfect, that is, endued with all possible perfection, out of the hands of his Creator, is a false notion, derived from the philosophers.*—*The universal system required subordination, and consequently comparative imperfection. That man was ever endued with all possible perfection, that is, with all perfection of which the idea is not contradictory or destructive of itself, is undoubtedly false.* But it can hardly be called *a false notion*, because no man ever thought it, nor can it be derived from the *philosophers*; for without pretending to guess what philosophers he may mean, it is very safe to affirm, that no philosopher ever said it. Of those who now maintain that *man* was once perfect, who may very easily be found, let the author inquire whether *man* was ever omniscient, whether he was ever omnipotent, whether he ever had even the lower power of archangels or angels. Their answers will soon inform him, that the supposed perfection of *man* was not absolute, but respective, that he was perfect in a sense consistent enough with subordination, perfect, not as compared with different beings, but with himself in his present degeneracy; not perfect as an angel, but perfect as man.

From this perfection, whatever it was, he thinks it necessary that man should be debarred, because pain is necessary to the good of the universe; and the pain of one order of beings extending its salutary influence to innumerable orders above and below, it was necessary that man should suffer, but

because it is not suitable to justice that pain should be inflicted on innocence, it was necessary that man should be criminal

This is given as a satisfactory account of the Original of moral Evil, which amounts only to this, that God created beings whose guilt he foreknew, in order that he might have proper objects of pain, because the pain of part is, no man knows how or why, necessary to the felicity of the whole

The perfection which man once had, may be so easily conceived, that without any unusual strain of imagination we can figure its revival. All the duties to God or man that are neglected we may fancy performed; all the crimes that are committed we may conceive forborn. Man will then be restored to his moral perfections, and into what head can it enter that by this change the universal system would be shaken, or the condition of any order of beings altered for the worse?

He comes in the fifth Letter to political, and in the sixth to religious Evils. Of political Evil, if we suppose the Origin of moral Evil discovered, the account is by no means difficult: polity being only the conduct of immoral men in publick affairs. The Evils of each particular kind of government are very clearly and elegantly displayed, and from their secondary causes very rationally deduced, but the first cause lies still in its ancient obscurity. There is in this Letter nothing new, nor any thing eminently instructive; one of his practical deductions, that *from government Evils cannot be eradicated, and their excess only can be prevented*, has

been always allowed; the question upon which all dissension arises is, when that excess begins, at what point men shall cease to bear, and attempt to remedy

Another of his precepts, though not new, well deserves to be transcribed, because it cannot be too frequently impressed.

“What has here been said of their imperfections and abuses, is by no means intended as a defence of them · every wise man ought to redress them to the utmost of his power, which can be effected by one method only; that is, by a reformation of manners · for as all political Evils derive their original from moral, these can never be removed, until those are first amended. He, therefore, who strictly adheres to virtue and sobriety in his conduct, and enforces them by his example, does more real service to a state, than he who displaces a minister, or de-thrones a tyrant; this gives but a temporary relief, but that exterminates the cause of the disease. No immoral man then can possibly be a true patriot; and all those who profess outrageous zeal for the liberty and prosperity of their country, and at the same time infringe her laws, affront her religion, and debauch her people, are but despicable quacks, by fraud or ignorance increasing the disorders they pretend to remedy.”

Of religion he has said nothing but what he has learned, or might have learned from the divines; that it is not universal, because it must be received upon conviction, and successively received by those whom conviction reached, that its evidences and

sanctions are not irresistible, because it was intended to induce, not to compel, and that it is obscure, because we want faculties to comprehend it. What he means by his assertion, that it wants policy, I do not well understand; he does not mean to deny that a good christian will be a good governor, or a good subject, and he has before justly observed, that the good man only is a patriot.

Religion has been, he says, corrupted by the wickedness of those to whom it was communicated, and has lost part of its efficacy by its connexion with temporal interest and human passion.

He justly observes, that from all this, no conclusion can be drawn against the divine original of christianity, since the objections arise not from the nature of the revelation, but of him to whom it is communicated.

All this is known, and all this is true, but why, we have not yet discovered. Our author, if I understand him right, pursues the argument thus: the religion of man produces evils, because the morality of man is imperfect; his morality is imperfect, that he may be justly a subject of punishment. he is made subject to punishment, because the pain of part is necessary to the happiness of the whole, pain is necessary to happiness, no mortal can tell why or how.

Thus, after having 'clambered with great labour from one step of argumentation to another, instead of rising into the light of knowledge, we are devolved back into dark ignorance; and all our effort ends in belief, that for the Evils of life there is some

good reason, and in confession, that the reason cannot be found. This is all that has been produced by the revival of Chrysippus's untractableness of matter, and the Arabian scale of existence. A system has been raised, which is so ready to fall to pieces of itself, that no great praise can be derived from its destruction. To object is always easy, and it has been well observed by a late writer, that *the hand which cannot build a hovel, may demolish a temple**.

Quam sub Rege pio

CLAUDIANUS

THE
FALSE ALARM.

[1770]

ONE of the chief advantages derived by the present generation from the improvement and diffusion of philosophy, is deliverance from unnecessary terrors, and exemption from false alarms. The unusual appearances, whether regular or accidental, which once spread consternation over ages of ignorance, are now the recreations of inquisitive security. The sun is no more lamented when it is eclipsed, than when it sets, and meteors play their coruscations without prognostick or prediction.

The advancement of political knowledge may be expected to produce in time the like effects. Causeless discontent and seditious violence will grow less frequent, and less formidable, as the science of government is better ascertained by a diligent study of the theory of man.

It is not indeed to be expected that physical and political truth should meet with equal acceptance, or gain ground upon the world with equal facility. The notions of the naturalist find mankind in a state of neutrality, or at worst have nothing to encounter but prejudice and vanity; prejudice without malign

nity, and vanity without interest. But the politician's improvements are opposed by every passion that can exclude conviction or suppress it, by ambition, by avarice, by hope, and by terrour, by publick faction, and private animosity

It is evident, whatever be the cause, that this nation, with all its renown for speculation and for learning, has yet made little proficiency in civil wisdom. We are still so much unacquainted with our own state, and so unskilful in the pursuit of happiness, that we shudder without danger, complain without grievances, and suffer our quiet to be disturbed, and our commerce to be interrupted, by an opposition to the government, raised only by interest, and supported only by clamour, which yet has so far prevailed upon ignorance and timidity, that many favour it as reasonable, and many dread it as powerful.

What is urged by those who have been so industrious to spread suspicion, and incite fury from one end of the kingdom to the other, may be known by perusing the papers which have been at once presented as petitions to the king, and exhibited in print as remonstrances to the people. It may therefore not be improper to lay before the publick the reflections of a man who cannot favour the opposition, for he thinks it wicked, and cannot fear it, for he thinks it weak.

The grievance which has produced all this tempest of outrage, the oppression in which all other oppressions are included, the invasion which has left us no property, the alarm that suffers no patriot to sleep in quiet, is comprised in a vote of the House

of Commons, by which the freeholders of Middlesex are deprived of a Briton's birth-right, representation in parliament.

They have indeed received the usual writ of election, but that writ, alas! was malicious mockery, they were insulted with the form, but denied the reality, for there was one man excepted from their choice

Non de vi, neque cæde, nec veneno,
Sed lis est mihi de tribus capellis

The character of the man thus fatally excepted, I have no purpose to delineate, Lampoon itself would disdain to speak ill of him of whom no man speaks well. It is sufficient that he is expelled the House of Commons, and confined in jail as being legally convicted of sedition and impiety.

That this man cannot be appointed one of the guardians and counsellors of the church and state, is a grievance not to be endured. Every lover of liberty stands doubtful of the fate of posterity, because the chief county in England cannot take its representative from a jail

Whence Middlesex should obtain the right of being denominated the chief county, cannot easily be discovered, it is indeed the county where the chief city happens to stand, but how that city treated the favourite of Middlesex is not yet forgotten. The county, as distinguished from the city, has no claim to particular consideration.

That a man was in jail for sedition and impiety, would, I believe, have been within memory a sufficient reason why he should not come out of jail a

legislator. This reason, notwithstanding the mutability of fashion, happens still to operate on the House of Commons. Their notions, however strange, may be justified by a common observation, that few are mended by imprisonment, and that he whose crimes have made confinement necessary, seldom makes any other use of his enlargement, than to do with greater cunning what he did before with less.

But the people have been told with great confidence, that the House cannot control the right of constituting representatives—that he who can persuade lawful electors to choose him, whatever be his character, is lawfully chosen, and has a claim to a seat in parliament, from which no human authority can depose him.

Here, however, the patrons of opposition are in some perplexity. They are forced to confess, that by a train of precedents sufficient to establish a custom of parliament, the House of Commons has jurisdiction over its own members, that the whole has power over individuals, and that this power has been exercised sometimes in imprisonment, and often in expulsion.

That such power should reside in the House of Commons in some cases, is inevitably necessary, since it is required by every polity, that where there is a possibility of offence, there should be a possibility of punishment. A member of the House cannot be cited for his conduct in parliament before any other court; and therefore, if the House cannot punish him, he may attack with impunity the rights of the people, and the title of the king.

This exemption from the authority of other courts was, I think, first established in favour of the five members in the long parliament. It is not to be considered as an usurpation, for it is implied in the principles of government. If legislative powers are not co-ordinate, they cease in part to be legislative; and if they be co-ordinate, they are unaccountable; for to whom must that power account, which has no superiour?

The House of Commons is indeed dissoluble by the king, as the nation has of late been very clamorously told; but while it subsists it is co-ordinate with the other powers, and this co-ordination ceases only when the House by dissolution ceases to subsist.

As the particular representatives of the people are in their publick character above the control of the courts of law, they must be subject to the jurisdiction of the House; and as the House, in the exercise of its authority, can be neither directed nor restrained, its own resolutions must be its laws, at least, if there is no antecedent decision of the whole legislature.

This privilege, not confirmed by any written law or positive compact, but by the resistless power of political necessity, they have exercised, probably from their first institution, but certainly, as their records inform us, from the 23d of Elizabeth, when they expelled a member for derogating from their privileges.

It may perhaps be doubted, whether it was originally necessary, that this right of control and punishment should extend beyond offences in the exercise of parliamentary duty, since all other crimes

are cognizable by other courts. But they, who are the only judges of their own rights, have exerted the power of expulsion on other occasions, and when wickedness arrived at a certain magnitude, have considered an offence against society as an offence against the House.

They have therefore divested notorious delinquents of their legislative character, and delivered them up to shame or punishment, naked and unprotected, that they might not contaminate the dignity of parliament.

It is allowed that a man attainted of felony cannot sit in parliament, and the Commons probably judged, that not being bound to the forms of law, they might treat these as felons, whose crimes were in their opinion equivalent to felony, and that as a known felon could not be chosen, a man so like a felon, that he could not easily be distinguished, ought to be expelled.

The first laws had no law to enforce them, the first authority was constituted by itself. The power exercised by the House of Commons is of this kind, a power rooted in the principles of government, and branched out by occasional practice; a power which necessity made just, and precedents have made legal.

It will occur that authority thus uncontrollable may, in times of heat and contest, be oppressively and injuriously exerted, and that he who suffers injustice is without redress, however innocent, however miserable.

The position is true, but the argument is useless. The Commons must be controlled, or be exempt

from control. If they are exempt, they may do injury which cannot be redressed; if they are controlled, they are no longer legislative.

If the possibility of abuse be an argument against authority, no authority ever can be established, if the actual abuse destroys its legality, there is no legal government now in the world.

This power, which the Commons have so long exercised, they ventured to use once more against Mr. Wilkes, and on the 3d of February, 1769, expelled him the House, *for having printed and published a seditious libel, and three obscene and impious libels.*

If these imputations were just, the expulsion was surely seasonable and that they were just, the House had reason to determine, as he had confessed himself, at the bar, the author of the libel which they term seditious, and was convicted in the King's Bench of both the publications.

But the freeholders of Middlesex were of another opinion. They either thought him innocent, or were not offended by his guilt. When a writ was issued for the election of a knight for Middlesex, in the room of John Wilkes, Esq. expelled the House, his friends on the sixteenth of February chose him again.

On the 17th, it was resolved, *that John Wilkes, Esq. having been in this session of parliament expelled the House, was, and is, incapable of being elected a member to serve in this present parliament.*

As there was no other candidate, it was resolved, at the same time, that the election of the sixteenth was a void election.

The freeholders still continued to think that no other man was fit to represent them, and on the sixteenth of March elected him once more. Their resolution was now so well known, that no opponent ventured to appear

The Commons began to find, that power without materials for operation can produce no effect. They might make the election void for ever, but if no other candidate could be found, their determination could only be negative. They, however, made void the last election, and ordered a new writ.

On the thirteenth of April was a new election, at which Mr. Lutterel, and others, offered themselves candidates. Every method of intimidation was used, and some acts of violence were done to hinder Mr. Lutterel from appearing. He was not deterred, and the poll was taken, which exhibited for

Mr. Wilkes,	-	-	1143
-------------	---	---	------

Mr. Lutterel,	-	-	296
---------------	---	---	-----

The sheriff returned Mr. Wilkes; but the House, on April the fifteenth, determined that Mr. Lutterel was lawfully elected

From this day begun the clamour, which has continued till now. Those who had undertaken to oppose the ministry, having no grievance of greater magnitude, endeavoured to swell this decision into bulk, and distort it into deformity, and then held it out to terrify the nation

Every artifice of sedition has been since practised to awaken discontent and inflame indignation. The papers of every day have been filled with exhortations and menaces of faction. The madness has spread through all ranks and through both sexes,

women and children have clamoured for Mr Wilkes' honest simplicity has been cheated into fury, and only the wise have escaped infection

The greater part may justly be suspected of not believing their own position, and with them it is not necessary to dispute. They cannot be convinced who are convinced already, and it is well known that they will not be ashamed.

The decision, however, by which the smaller number of votes was preferred to the greater, has perplexed the minds of some, whose opinions it were indecent to despise, and who by their integrity well deserve to have their doubts appeased

Every diffuse and complicated question may be examined by different methods, upon different principles; and that truth, which is easily found by one investigator, may be missed by another, equally honest and equally diligent.

Those who inquire, whether a smaller number of legal votes can elect a representative in opposition to a greater, must receive from every tongue the same answer.

The question, therefore, must be, whether a smaller number of legal votes shall not prevail against a greater number of votes not legal?

It must be considered, that those votes only are legal which are legally given, and that those only are legally given which are given for a legal candidate

It remains then to be discussed, whether a man expelled can be so disqualified by a vote of the House, as that he shall be no longer eligible by lawful electors?

Here we must again recur, not to positive institutions, but to the unwritten law of social nature, to the great and pregnant principle of political necessity. All government supposes subjects, all authority implies obedience. To suppose in one the right to command what another has the right to refuse, is absurd and contradictory. A state so constituted must rest for ever in motionless equipoise, with equal attractions of contrary tendency, with equal weights of power balancing each other.

Laws which cannot be enforced, can neither prevent nor rectify disorders. A sentence which cannot be executed can have no power to warn or to reform. If the Commons have only the power of dismissing for a few days the man whom his constituents can immediately send back, if they can expel but cannot exclude, they have nothing more than nominal authority, to which perhaps obedience never may be paid.

The representatives of our ancestors had an opinion very different they fined and imprisoned their members ; on great provocation they disabled them for ever ; and this power of pronouncing perpetual disability is maintained by Selden himself

These claims seem to have been made and allowed, when the constitution of our government had not yet been sufficiently studied. Such powers are not legal, because they are not necessary . and of that power which only necessity justifies, no more is to be admitted than necessity obtrudes.

The Commons cannot make laws, they can only pass resolutions, which, like all resolutions, are of

force only to those that make them, and to those only while they are willing to observe them.

The vote of the House of Commons has therefore only so far the force of a law, as that force is necessary to preserve the vote from losing its efficacy, it must begin by operating upon themselves, and extends its influence to others, only by consequences arising from the first intention. He that starts game on his own manor, may pursue it into another.

They can properly make laws only for themselves. a member, while he keeps his seat, is subject to these laws, but when he is expelled, the jurisdiction ceases, for he is now no longer within their dominion.

The disability, which a vote can superinduce to expulsion, is no more than was included in expulsion itself, it is only a declaration of the Commons, that they will permit no longer him whom they thus censure to sit with them in parliament; a declaration made by that right which they necessarily possess, of regulating their own House, and of inflicting punishment on their own delinquents.

They have therefore no other way to enforce the sentence of incapacity than that of adhering to it. They cannot otherwise punish the candidate so disqualified for offering himself, nor the electors for accepting him. But if he has any competitor, that competitor must prevail, and if he has none, his election will be void, for the right of the House to reject, annihilates with regard to the man so rejected the right of electing.

It has been urged, that the power of the House terminates with their session ; since a prisoner committed by the Speaker's warrant cannot be detained during the recess. That power indeed ceases with the session, which must operate by the agency of others, because, when they do not sit, they can employ no agent, having no longer any legal existence, but that which is exercised on themselves revives at their meeting, when the subject of that power still subsists. They can in the next session refuse to readmit him, whom in the former session they expelled

That expulsion inferred exclusion, in the present case, must be, I think, easily admitted. The expulsion and the writ issued for a new election were in the same session, and since the House is by the rule of parliament bound for the session by a vote once passed, the expelled member cannot be admitted. He that cannot be admitted, cannot be elected ; and the votes given to a man ineligible being given in vain, the highest number for an eligible candidate becomes a majority.

To these conclusions, as to most moral, and to all political positions, many objections may be made. The perpetual subject of political disquisition is not absolute, but comparative good. Of two systems of government, or two laws relating to the same subject, neither will ever be such as theoretical nicety would desire, and therefore neither can easily force its way against prejudice and obstinacy, each will have its excellencies and defects, and every man, with a little help from pride, may think his own the best

It seems to be the opinion of many, that expulsion is only a dismissal of the representative to his constituents, with such a testimony against him as his sentence may comprise, and that if his constituents, notwithstanding the censure of the House, thinking his case hard, his fault trifling, or his excellencies such as overbalance it, should again choose him as still worthy of their trust, the House cannot refuse him, for his punishment has purged his fault, and the right of electors must not be violated

This is plausible, but not cogent. It is a scheme of representation which would make a specious appearance in a political romance, but cannot be brought into practice among us, who see every day the towering head of speculation bow down unwillingly to groveling experience

Governments formed by chance, and gradually improved by such expedients as the successive discovery of their defects happened to suggest, are never to be tied by a regular theory. They are fabricks of dissimilar materials, raised by different architects, upon different plans. We must be content with them as they are, should we attempt to mend their disproportions, we might easily demolish, and difficultly rebuild them

Laws are now made, and customs are established; these are our rules, and by them we must be guided

It is uncontrovertibly certain, that the Commons never intended to leave electors the liberty of returning them an expelled member, for they always

require one to be chosen in the room of him that is expelled, and I see not with what propriety a man can be re-chosen in his own room.

Expulsion, if this were its whole effect, might very often be desirable. Sedition, or obscenity, might be no greater crimes in the opinion of other electors, than in that of the freeholders of Middlesex; and many a wretch, whom his colleagues should expel, might come back persecuted into fame, and provoke with harder front a second expulsion.

Many of the representatives of the people can hardly be said to have been chosen at all. Some by inheriting a borough inherit a seat, and some sit by the favour of others, whom perhaps they may gratify by the act which provoked the expulsion. Some are safe by their popularity, and some by their alliances. None would dread expulsion, if this doctrine were received, but those who bought their elections, and who would be obliged to buy them again at a higher price.

But as uncertainties are to be determined by things certain, and customs to be explained, where it is possible, by written law, the patriots have triumphed with a quotation from an act of the 4th and 5th of Anne, which permits those to be re-chosen whose seats are vacated by the acceptance of a place of profit. This they wisely consider as an expulsion, and from the permission, in this case, of a re-election, infer that every other expulsion leaves the delinquent entitled to the same indulgence. This is the paragraph:

“ If any person, *being chosen a member* of the House of Commons, shall accept of any office from the crown, *during such time as he shall continue a member*, his election shall be, and is hereby declared to be void, and a new writ shall issue for a new election, as if such person so accepting was naturally dead. *Nevertheless such person shall be capable of being again elected*, as if his place had not become void as aforesaid ”

How this favours the doctrine of re-admission by a second choice, I am not able to discover. The statute of 30 Charles II. had enacted, That he who should sit in the House of Commons, without taking the oaths and subscribing the test, should be disabled to sit in the House during that Parliament, and a writ should issue for the election of a new member, in place of the member so disabled, as if such member had naturally died.

This last clause is apparently copied in the act of Anne, but with the common fate of imitators. In the act of Charles, the political death continued during the parliament, in that of Anne it was hardly worth the while to kill the man whom the next breath was to revive. It is, however, apparent, that in the opinion of the parliament, the dead-doing lines would have kept him motionless, if he had not been recovered by a kind exception. A seat vacated, could not be regained without express permission of the same statute

The right of being chosen again to a seat thus vacated is not enjoyed by any general right, but required a special clause, and solicitous provision.

But what resemblance can imagination conceive between one man vacating his seat, by a mark of favour from the crown, and another driven from it for sedition and obscenity. The acceptance of a place contaminates no character, the crown that gives it, intends to give with it always dignity, sometimes authority. The Commons, it is well known, think not worse of themselves or others for their offices of profit; yet profit implies temptation, and may expose a representative to the suspicion of his constituents, though if they still think him worthy of their confidence, they may again elect him.

Such is the consequence. When a man is dismissed by law to his constituents, with new trust and new dignity, they may, if they think him incorruptible, restore him to his seat; what can follow, therefore, but that when the House drives out a varlet with publick infamy, he goes away with the like permission to return?

If infatuation be, as the proverb tells us, the forerunner of destruction, how near must be the ruin of a nation that can be incited against its governors, by sophistry like this. I may be excused if I catch the panic, and join my groans at this alarming crisis, with the general lamentation of weeping patriots.

Another objection is, that the Commons, by pronouncing the sentence of disqualification, make a law, and take upon themselves the power of the whole legislature. Many quotations are then produced to prove that the House of Commons can make no laws.

Three acts have been cited, disabling members for different terms on different occasions ; and it is profoundly remarked, that if the Commons could by their own privilege have made a disqualification, their jealousy of their privileges would never have admitted the concurrent sanction of the other powers.

I must for ever remind these puny controvertists, that those acts are laws of permanent obligation : that two of them are now in force, and that the other expired only when it had fulfilled its end. Such laws the Commons cannot make ; they could, perhaps, have determined for themselves, that they would expel all who should not take the test, but they could leave no authority behind them, that should oblige the next parliament to expel them. They could refuse the South Sea directors, but they could not entail the refusal. They can disqualify by vote, but not by law ; they cannot know that the sentence of disqualification pronounced to-day may not become void to-morrow, by the dissolution of their own House. Yet while the same parliament sits, the disqualification continues unless the vote be rescinded, and while it so continues, makes the votes, which freeholders may give to the interdicted candidate, useless and dead, since there cannot exist, with respect to the same subject at the same time, an absolute power to choose and an absolute power to reject.

In 1614, the attorney-general was voted incapable of a seat in the House of Commons ; and the nation is triumphantly told, that though the vote never was revoked, the attorney-general is now a member. He certainly may now be a member

without revocation of the vote A law is of perpetual obligation, but a vote is nothing when the voters are gone. A law is a compact reciprocally made by the legislative powers, and therefore not to be abrogated but by all the parties. A vote is simply a resolution, which binds only him that is willing to be bound.

I have thus punctiliously and minutely pursued this disquisition, because I suspect that these reasoners, whose business is to deceive others, have sometimes deceived themselves, and I am willing to free them from their embarrassment, though I do not expect much gratitude for my kindness

Other objections are yet remaining, for of political objections there cannot easily be an end It has been observed, that vice is no proper cause of expulsion, for if the worst man in the House were always to be expelled, in time none would be left. But no man is expelled for being worst, he is expelled for being enormously bad; his conduct is compared, not with that of others, but with the rule of action

The punishment of expulsion being in its own nature uncertain, may be too great or too little for the fault

This must be the case of many punishments. Forfeiture of chattels is nothing to him that has no possessions Exile itself may be accidentally a good, and indeed any punishment less than death is very different to different men

But if this precedent be admitted and established, no man can hereafter be sure that he shall be represented by him whom he would choose One half

of the House may meet early in the morning, and snatch an opportunity to expel the other, and the greater part of the nation may by this stratagem be without its lawful representatives -

He that sees all this, sees very far. But I can tell him of greater evils yet behind. There is one possibility of wickedness, which, at this alarming crisis, has not yet been mentioned. Every one knows the malice, the subtilty, the industry, the vigilance, and the greediness of the Scots. The Scotch members are about the number sufficient to make a house. I propose it to the consideration of the supporters of the Bill of Rights, whether there is not reason to suspect, that these hungry intruders from the north are now contriving to expel all the English. We may then curse the hour in which it was determined, that expulsion and exclusion are the same. For who can guess what may be done when the Scots have the whole House to themselves?

Thus agreeable to custom and reason, notwithstanding all objections, real or imaginary; thus consistent with the practice of former times, and thus consequential to the original principles of government, is that decision by which so much violence of discontent has been excited, which has been so dolorously bewailed, and so outrageously resented.

Let us however not be seduced to put too much confidence in justice or in truth, they have often been found inactive in their own defence, and give more confidence than help to their friends and their advocates. It may perhaps be prudent to make

one momentary concession to falsehood, by supposing the vote in Mr. Lutterel's favour to be wrong.

All wrong ought to be rectified. If Mr Wilkes is deprived of a lawful seat, both he and his electors have reason to complain, but it will not be easily found, why, among the innumerable wrongs of which a great part of mankind are hourly complaining, the whole care of the public should be transferred to Mr. Wilkes and the freeholders of Middlesex, who might all sink into non-existence, without any other effect, than that there would be room made for a new rabble, and a new retailer of sedition and obscenity. The cause of our country would suffer little; the rabble, whencesoever they come, will be always patriots, and always supporters of the Bill of Rights

The House of Commons decides the disputes arising from elections Was it ever supposed, that in all cases their decisions were right? Every man whose lawful election is defeated, is equally wronged with Mr. Wilkes, and his constituents feel their disappointment with no less anguish than the freeholders of Middlesex. These decisions have often been apparently partial, and sometimes tyrannically oppressive A majority has been given to a favourite candidate, by expunging votes which had always been allowed, and which therefore had the authority by which all votes are given, that of custom uninterrupted When the Commons determine who shall be constituents, they may, with some propriety, be said to make law, because those determinations have hitherto, for the sake of quiet, been

adopted by succeeding parliaments. A vote therefore of the House, when it operates as a law, is to individuals a law only temporary, but to communities perpetual.

Yet though all this has been done, and though at every new parliament much of this is expected to be done again, it has never produced in any former time such an *alarming crisis*. We have found by experience, that though a squire has given ale and venison in vain, and a borough has been compelled to see its dearest interest in the hands of him whom it did not trust, yet the general state of the nation has continued the same. The sun has risen, and the corn has grown, and whatever talk has been of the danger of property, yet he that ploughed the field commonly reaped it, and he that built a house was master of the door. the vexation excited by injustice suffered, or supposed to be suffered, by any private man, or single community, was local and temporary, it neither spread far, nor lasted long.

The nation looked on with little care, because there did not seem to be much danger. The consequence of small irregularities was not felt, and we had not yet learned to be terrified by very distant enemies.

But quiet and security are now at an end. Our vigilance is quickened, and our comprehension is enlarged. We not only see events in their causes, but before their causes; we hear the thunder while the sky is clear, and see the mine sprung before it is dug. Political wisdom has, by the force of English genius, been improved at last not only to political intuition, but to political prescience

But it cannot, I am afraid, be said, that as we are grown wise, we are made happy. It is said of those who have the wonderful power called second sight, that they seldom see any thing but evil: political second sight has the same effect, we hear of nothing but of an alarming crisis, of violated rights, and expiring liberties. The morning rises upon new wrongs, and the dreamer passes the night in imaginary shackles.

The sphere of anxiety is now enlarged, he that hitherto cared only for himself, now cares for the Publick; for he has learned that the happiness of individuals is comprised in the prosperity of the whole, and that his country never suffers, but he suffers with it, however it happens that he feels no pain.

Fired with this fever of epidemick patriotism, the tailor slips his thimble, the draper drops his yard, and the blacksmith lays down his hammer; they meet at an honest alehouse, consider the state of the nation, read or hear the last petition, lament the miseries of the time, are alarmed at the dreadful crisis, and subscribe to the support of the Bill of Rights.

It sometimes indeed happens, that an intruder of more benevolence than prudence attempts to disperse their cloud of dejection, and ease their hearts by seasonable consolation. He tells them, that though the government cannot be too diligently watched, it may be too hastily accused; and that, though private judgment is every man's right, yet we cannot judge of what we do not know, that we feel at present no evils which government can alleviate, and that the publick business is committed

to men who have as much right to confidence as their adversaries, that the freeholders of Middlesex, if they could not choose Mr. Wilkes, might have chosen any other man, and that *he trusts we have within the realm five hundred as good as he*, that even if this which has happened to Middlesex had happened to every other county, that one man should be made incapable of being elected, it could produce no great change in the parliament, nor much contract the power of election, that what has been done is probably right, and that if it be wrong it is of little consequence, since a like case cannot easily occur, that expulsions are very rare, and if they should, by unbounded insolence of faction, become more frequent, the electors may easily provide a second choice.

All this he may say, but not half of this will be heard, his opponents will stun him and themselves with a confused sound of pensions and places, venality and corruption, oppression and invasion, slavery and ruin

Outcries like these, uttered by malignity, and echoed by folly, general accusations of indeterminate wickedness; and obscure hints of impossible designs, dispersed among those that do not know their meaning, by those that know them to be false, have disposed part of the nation, though but a small part, to pester the court with ridiculous petitions

The progress of a petition is well known. An ejected placeman goes down to his county or his borough, tells his friends of his inability to serve them, and his constituents of the corruption of the government. His friends readily understand that he who can get nothing, will have nothing to give

They agree to proclaim a meeting; meat and drink are plentifully provided, a crowd is easily brought together, and those who think that they know the reason of their meeting, undertake to tell those who know it not. Ale and clamour unite their powers, the crowd, condensed and heated, begins to ferment with the leaven of sedition. All see a thousand evils, though they cannot show them, and grow impatient for a remedy, though they know not what.

A speech is then made by the Cicero of the day; he says much, and suppresses more, and credit is equally given to what he tells, and what he conceals. The petition is read and universally approved. Those who are sober enough to write, add their names, and the rest would sign it if they could.

Every man goes home and tells his neighbour of the glories of the day; how he was consulted, and what he advised; how he was invited into the great room, where his lordship called him by his name; how he was caressed by Sir Francis, Sir Joseph, or Sir George; how he eat turtle and venison, and drank unanimity to the three brothers.

The poor loiterer, whose shop had confined him, or whose wife had locked him up, hears the tale of luxury with envy, and at last inquires what was their petition. Of the petition nothing is remembered by the narrator, but that it spoke much of fears and apprehensions, and something very alarming, and that he is sure it is against the government; the other is convinced that it must be right, and wishes he had been there, for he loves wine and venison, and is resolved as long as he lives to be against the government.

The petition is then handed from town to town,

and from house to house, and wherever it comes the inhabitants flock together, that they may see that which must be sent to the king. Names are easily collected. One man signs because he hates the papist; another because he has vowed destruction to the turnpikes; one because it will vex the parson; another because he owes his landlord nothing; one because he is rich; another because he is poor; one to show that he is not afraid, and another to show that he can write.

The passage, however, is not always smooth. Those who collect contributions to sedition, sometimes apply to a man of higher rank and more enlightened mind, who, instead of lending them his name, calmly reproves them for being seducers of the people.

You who are here, says he, complaining of venality, are yourselves the agents of those who, having estimated themselves at too high a price, are only angry that they are not bought. You are appealing from the parliament to the rabble, and inviting those who scarcely, in the most common affairs, distinguish right from wrong, to judge of a question complicated with law written and unwritten, with the general principles of government, and the particular customs of the House of Commons; you are showing them a grievance, so distant that they cannot see it, and so light that they cannot feel it; for how, but by unnecessary intelligence and artificial provocation, should the farmers and shopkeepers of Yorkshire and Cumberland know or care how Middlesex is represented? Instead of wandering thus round the county to exasperate the rage of

party, and darken the suspicions of ignorance, it is the duty of men like you, who have leisure for inquiry, to lead back the people to their honest labour; to tell them, that submission is the duty of the ignorant, and content the virtue of the poor, that they have no skill in the art of government, nor any interest in the dissensions of the great, and when you meet with any, as some there are, whose understandings are capable of conviction, it will become you to allay this foaming ebullition, by showing them that they have as much happiness as the condition of life will easily receive, and that a government, of which an erroneous or unjust representation of Middlesex is the greatest crime that interest can discover, or malice can upbraid, is a government approaching nearer to perfection, than any that experience has known, or history related.

The drudges of sedition wish to change their ground, they hear him with sullen silence, feel conviction without repentance, and are confounded but not abashed; they go forward to another door, and find a kinder reception from a man enraged against the government, because he has just been paying the tax upon his windows.

That a petition for a dissolution of the parliament will at all times have its favourers, may be easily imagined. The people indeed do not expect that one House of Commons will be much honester or much wiser than another, they do not suppose that the taxes will be lightened, or, though they have been so often taught to hope it, that soap and candles will be cheaper, they expect no redress of grievances, for of no grievances but taxes do they

complain; they wish not the extension of liberty, for they do not feel any restraint; about the security of privilege or property they are totally careless, for they see no property invaded, nor know, till they are told, that any privilege has suffered violation.

Least of all do they expect, that any future parliament will lessen its own powers, or communicate to the people that authority which it has once obtained.

Yet a new parliament is sufficiently desirable. The year of election is a year of jollity, and what is still more delightful, a year of equality. The glutton now eats the delicacies for which he longed when he could not purchase them, and the drunkard has the pleasure of wine without the cost. The drone lives a while without work, and the shopkeeper, in the flow of money, raises his price. The mechanick, that trembled at the presence of Sir Joseph, now bids him come again for an answer, and the poacher whose gun has been seized, now finds an opportunity to reclaim it. Even the honest man is not displeased to see himself important, and willingly resumes in two years that power which he had resigned for seven. Few love their friends so well as not to desire superiority by unexpensive benefaction.

Yet, notwithstanding all these motives to compliance, the promoters of petitions have not been successful. Few could be persuaded to lament evils which they did not suffer, or to solicit for redress which they do not want. The petition has been, in

some places, rejected; and perhaps in all but one, signed only by the meanest and grossest of the people.

Since this expedient now invented or revived to distress the government, and equally practicable at all times by all who shall be excluded from power and from profit, has produced so little effect, let us consider the opposition as no longer formidable. The great engine has recoiled upon them. They thought that *the terms they sent were terms of weight*, which would have *amazed all and stumbled many*, but the consternation is now over, and their foes *stand upright*, as before.

With great propriety and dignity the king has, in his speech, neglected or forgotten them. He might easily know that what was presented as the sense of the people, is the sense only of the profligate and dissolute; and that whatever parliament should be convened, the same petitioners would be ready, for the same reason, to request its dissolution.

As we once had a rebellion of the clowns, we have now an opposition of the pedlars. The quiet of the nation has been for years disturbed by a faction, against which all factions ought to conspire, for its original principle is the desire of levelling, it is only animated, under the name of zeal, by the natural malignity of the mean against the great.

When in the confusion which the English invasions produced in France, the villains, imagining that they had found the golden hour of emancipation, took arms in their hands, the knights of both

nations considered the cause as common, and, suspending the general hostility, united to chastise them.

The whole conduct of this despicable faction is distinguished by plebeian grossness, and savage indecency. To misrepresent the actions and the principles of their enemies is common to all parties; but the insolence of invective, and brutality of reproach, which have lately prevailed, are peculiar to this

An infallible characteristick of meanness is cruelty. This is the only faction that has shouted at the condemnation of a criminal, and that, when his innocence procured his pardon, has clamoured for his blood

All other parties, however enraged at each other, have agreed to treat the throne with decency; but these low-born railers have attacked not only the authority, but the character of their sovereign, and have endeavoured, surely without effect, to alienate the affections of the people from the only king, who, for almost a century, has much appeared to desire, or much endeavoured to deserve them. They have insulted him with rudeness and with menaces, which were never excited by the gloomy sullenness of William, even when half the nation denied him their allegiance; nor by the dangerous bigotry of James, unless when he was finally driven from his palace, and with which scarcely the open hostilities of rebellion ventured to vilify the unhappy Charles, even in the remarks on the cabinet of Naseby

It is surely not unreasonable to hope, that the nation will consult its dignity, if not its safety, and

disdain to be protected or enslaved by the declaimers or the plotters of a city-tavern. Had Rome fallen by the Catilnianian conspiracy, she might have consoled her fate by the greatness of her destroyers; but what would have alleviated the disgrace of England, had her government been changed by Tilei or by Ket?

One part of the nation has never before contended with the other, but for some weighty and apparent interest. If the means were violent, the end was great. The civil war was fought for what each army called and believed the best religion, and the best government. The struggle in the reign of Anne, was to exclude or restore an exile king. We are now disputing, with almost equal animosity, whether Middlesex shall be represented or not by a criminal from a jail.

The only comfort left in such degeneracy is that a lower state can be no longer possible.

In this contemptuous censure, I mean not to include every single man. In all lead, says the chemist, there is silver, and in all copper there is gold. But mingled masses are justly denominated by the greater quantity, and when the precious particles are not worth extraction, a faction and a pig must be melted down together to the forms and offices that chance allots them.

Fiunt urceoli, pulves, sartago, patellæ

A few weeks will now show whether the government can be shaken by empty noise, and whether the faction which depends upon its influence, has

not deceived alike the publick and itself. That it should have continued till now, is sufficiently shameful. None can indeed wonder that it has been supported by the sectaries, the natural fomenters of sedition, and confederates of the rabble, of whose religion little now remains but hatred of establishments, and who are angry to find separation now only tolerated, which was once rewarded; but every honest man must lament, that it has been regarded with frigid neutrality by the Tories, who, being long accustomed to signalize their principles by opposition to the court, do not yet consider that they have at last a king who knows not the name of party, and who wishes to be the common father of all his people

As a man inebriated only by vapours soon recovers in the open air; a nation discontented to madness, without any adequate cause, will return to its wits and its allegiance when a little pause has cooled it to reflection. Nothing, therefore, is necessary, at this *alarming crisis*, but to consider the alarm as false. To make concessions, is to encourage encroachment. Let the court despise the faction, and the disappointed people will soon deride it.

THOUGHTS
ON THE
LATE TRANSACTIONS
RESPECTING
FALKLAND'S ISLANDS.
[1771.]

To proportion the eagerness of contest to its importance seems too hard a task for human wisdom. The pride of wit has kept ages busy in the discussion of useless questions, and the pride of power has destroyed armies to gain or to keep unprofitable possessions

Not many years have passed since the cruelties of war were filling the world with terror and with sorrow; rage was at last appeased, or strength exhausted, and to the harassed nations peace was restored, with its pleasures and its benefits. Of this state all felt the happiness, and all implored the continuance; but what continuance of happiness can be expected, when the whole system of European empire can be in danger of a new concussion, by a contention for a few spots of earth, which, in the deserts of the ocean, had almost escaped human notice, and which, if they had not happened to make a sea-mark, had perhaps never had a name?

Fortune often delights to dignify what nature has neglected, and that renown which cannot be claimed by intrinsic excellence or greatness is sometimes derived from unexpected accidents. The Rubicon was ennobled by the passage of Cæsar, and the time is now come when Falkland's Islands demand their historian

But the writer to whom this employment shall be assigned will have few opportunities of descriptive splendour, or narrative elegance. Of other countries it is told how often they have changed their government, these islands have hitherto changed only their name. Of heroes to conquer, or legislators to civilize, here has been no appearance; nothing has happened to them but that they have been sometimes seen by wandering navigators, who passed by them in search of better habitations

When the Spaniards, who, under the conduct of Columbus, discovered America, had taken possession of its most wealthy regions; they surprised and terrified Europe by a sudden and unexampled influx of riches. They were made at once insupportably insolent, and might perhaps have become irresistibly powerful, had not their mountainous treasures been scattered in the air with the ignorant profusion of unaccustomed opulence

The greater part of the European potentates saw this stream of riches flowing into Spain without attempting to dip their own hands in the golden fountain. France had no naval skill or power; Portugal was extending her dominions in the east over regions formed in the gaiety of nature; the

To proportion the eagerness of contest to its importance seems too hard a task for human wisdom. The pride of wit has kept ages busy in the discussion of useless questions, and the pride of power has destroyed armies to gain or to keep unprofitable possessions.

Not many years have passed since the cruelties of war were filling the world with terror and with sorrow; rage was at last appeased, or strength exhausted, and to the harassed nations peace was restored, with its pleasures and its benefits. Of this state all felt the happiness, and all implored the continuance; but what continuance of happiness can be expected, when the whole system of European empire can be in danger of a new concussion, by a contention for a few spots of earth, which, in the deserts of the ocean, had almost escaped human notice, and which, if they had not happened to make a sea-mark, had perhaps never had a name?

Fortune often delights to dignify what nature has neglected, and that renown which cannot be claimed by intrinsic excellence or greatness is sometimes derived from unexpected accidents. The Rubicon was ennobled by the passage of Cæsar, and the time is now come when Falkland's Islands demand their historian.

But the writer to whom this employment shall be assigned will have few opportunities of descriptive splendour, or narrative elegance. Of other countries it is told how often they have changed their government, these islands have hitherto changed only their name. Of heroes to conquer, or legislators to civilize, here has been no appearance; nothing has happened to them but that they have been sometimes seen by wandering navigators, who passed by them in search of better habitations.

When the Spaniards, who, under the conduct of Columbus, discovered America, had taken possession of its most wealthy regions; they surprised and terrified Europe by a sudden and unexampled influx of riches. They were made at once insupportably insolent, and might perhaps have become irresistibly powerful, had not their mountainous treasures been scattered in the air with the ignorant profusion of unaccustomed opulence.

The greater part of the European potentates saw this stream of riches flowing into Spain without attempting to dip their own hands in the golden fountain. France had no naval skill or power, Portugal was extending her dominions in the east over regions formed in the gaiety of nature, the

Hanseatic league, being planned only for the security of traffick, had no tendency to discovery or invasion; and the commercial states of Italy growing rich by trading between Asia and Europe, and not lying upon the ocean, did not desire to seek by great hazards, at a distance, what was almost at home to be found with safety.

The English alone were animated by the success of the Spanish navigators, to try if any thing was left that might reward adventure, or incite appropriation. They sent Cabot into the north, but in the north there was no gold or silver to be found. The best regions were pre-occupied, yet they still continued their hopes and their labours. They were the second nation that dared the extent of the Pacific Ocean, and the second circumnavigators of the globe.

By the war between Elizabeth and Philip, the wealth of America became lawful prize, and those who were less afraid of danger than of poverty supposed that riches might easily be obtained by plundering the Spaniards. Nothing is difficult when gain and honour unite their influence, the spirit and vigour of these expeditions enlarged our views of the new world, and made us first acquainted with its remote coasts.

In the fatal voyage of Cavendish (1592), Captain Davis, who, being sent out as his associate, was afterwards parted from him or deserted him, as he was driven by violence of weather about the straits of Magellan, is supposed to have been the first who saw the lands now called Falkland's Islands, but his distress permitted him not to make any observa-

tion, and he left them, as he found them, without a name.

Not long afterwards (1594) Sir Richard Hawkins, being in the same seas with the same designs, saw these islands again, if they are indeed the same islands, and in honour of his mistress, called them Hawkins's Maiden Land.

This voyage was not of renown sufficient to procure a general reception to the new name, for when the Dutch, who had now become strong enough not only to defend themselves, but to attack their masters, sent (1598) Verhagen and Sebald de Wert into the South Seas, these islands, which were not supposed to have been known before, obtained the denomination of Sebald's Islands, and were from that time placed in the charts, though Frezier tells us, that they were yet considered as of doubtful existence

Their present English name was probably given them (1689) by Strong, whose journal, yet unprinted, may be found in the Museum. This name was adopted by Halley, and has from that time, I believe, been received into our maps.

The privateers which were put into motion by the wars of William and Anne saw those islands and mention them, but they were yet not considered as territories worth a contest. Strong affirmed that there was no wood, and Dampier suspected that they had no water.

Frezier describes their appearance with more distinctness, and mentions some ships of St Maloes, by which they had been visited, and to which he seems willing enough to ascribe the honour of dis-

covering islands which yet he admits to have been seen by Hawkins, and named by Sebald de Wert He, I suppose, in honour of his countrymen, called them the Malouines, the denomination now used by the Spaniards, who seem not, till very lately, to have thought them important enough to deserve a name

Since the publication of Anson's voyage, they have very much changed their opinion, finding a settlement in Pepys's or Falkland's Island recommended by the author as necessary to the success of our future expeditions against the coast of Chili, and as of such use and importance, that it would produce many advantages in peace, and in war would make us masters of the South Sea.

Scarcely any degree of judgment is sufficient to restrain the imagination from magnifying that on which it is long detained. The relator of Anson's voyage had heated his mind with its various events, had partaken the hope with which it was begun, and the vexation suffered by its various miscarriages, and then thought nothing could be of greater benefit to the nation than that which might promote the success of such another enterprise

Had the heroes of that history even performed and attained all that when they first spread their sails, they ventured to hope, the consequence would yet have produced very little hurt to the Spaniards, and very little benefit to the English. They would have taken a few towns, Anson and his companions would have shared the plunder or the ransom, and the Spaniards, finding their southern territories accessible, would for the future have guarded them better.

That such a settlement may be of use in war, no man that considers its situation will deny. But war is not the whole business of life; it happens but seldom, and every man, either good or wise, wishes that its frequency were still less. That conduct which betrays designs of future hostility, if it does not excite violence, will always generate malignity; it must for ever exclude confidence and friendship, and continue a cold and sluggish rivalry, by a sly reciprocation of indirect injuries, without the bravery of war, or the security of peace.

The advantage of such a settlement in time of peace is, I think, not easily to be proved. For what use can it have but of a station for contraband traders, a nursery of fraud, and a 'receptacle of theft? Narborough, about a century ago, was of opinion, that no advantage could be obtained in voyages to the South Sea, except by such an armament as, with a sailor's morality, *might trade by force*. It is well known that the prohibitions of foreign commerce are, in these countries, to the last degree rigorous, and that no man not authorized by the king of Spain can trade there but by force or stealth. Whatever profit is obtained must be gained by the violence of rapine, or dexterity of fraud.

Government will not perhaps soon arrive at such purity and excellence, but that some connivance at least will be indulged to the triumphant robber and successful cheat. He that brings wealth home is seldom interrogated by what means it was obtained. This, however, is one of those modes of corruption with which mankind ought always to struggle, and which they may in time hope to overcome. There

is reason to expect, that as the world is more enlightened, policy and morality will at last be reconciled, and that nations will learn not to do what they would not suffer.

But the silent toleration of suspected guilt is a degree of depravity far below that which openly incites and manifestly protects it. To pardon a pirate may be injurious to mankind, but how much greater is the crime of opening a port in which all pirates shall be safe? The contraband trader is not more worthy of protection. if with Narborough he trades by force, he is a pirate; if he trades secretly, he is only a thief. Those who honestly refuse his traffick he hates as obstructors of his profit, and those with whom he deals he cheats, because he knows that they dare not complain. He lives with a heart full of that malignity which fear of detection always generates in those who are to defend unjust acquisitions against lawful authority, and when he comes home with riches thus acquired, he brings a mind hardened in evil, too proud for reproof, and too stupid for reflection, he offends the high by his insolence, and corrupts the low by his example.

Whether these truths were forgotten or despised, or whether some better purpose was then in agitation, the representation made in Anson's voyage had such effect upon the statesmen of that time, that (in 1748) some sloops were fitted out for the fuller knowledge of Pepys's and Falkland's Islands, and for further discoveries in the South Sea. This expedition, though perhaps designed to be secret, was not long concealed from Wall, the Spanish ambassador, who so vehemently opposed it, and so strongly

maintained the right of the Spaniards to the exclusive dominion of the South Sea, that the English ministry relinquished part of their original design, and declared that the examination of those two islands was the utmost that their orders should comprise

This concession was sufficiently liberal or sufficiently submissive, yet the Spanish court was neither gratified by our kindness, nor softened by our humility. Sir Benjamin Keene, who then resided at Madrid, was interrogated by Carvajal concerning the visit intended to Pepys's and Falkland's Islands, in terms of great jealousy and discontent; and the intended expedition was represented, if not as a direct violation of the late peace, yet as an act inconsistent with amicable intentions, and contrary to the professions of mutual kindness which then passed between Spain and England. Keene was directed to protest that nothing more than mere discovery was intended, and that no settlement was to be established. The Spaniard readily replied, that if this was a voyage of wanton curiosity, it might be gratified with less trouble, for he was willing to communicate whatever was known, that to go so far only to come back, was no reasonable act, and it would be a slender sacrifice to peace and friendship to omit a voyage in which nothing was to be gained. that if we left the places as we found them, the voyage was useless; and if we took possession, it was a hostile armament, nor could we expect that the Spaniards would suppose us to visit the southern parts of America only from curiosity, after the scheme proposed by the author of Anson's voyage.

is reason to expect, that as the world is more enlightened, policy and morality will at last be reconciled, and that nations will learn not to do what they would not suffer.

But the silent toleration of suspected guilt is a degree of depravity far below that which openly incites and manifestly protects it. To pardon a pirate may be injurious to mankind; but how much greater is the crime of opening a port in which all pirates shall be safe? The contraband trader is not more worthy of protection if with Narborough he trades by force, he is a pirate; if he trades secretly, he is only a thief. Whether these truths were forgotten or despised, or whether some better purpose was then in agitation, the representation made in Anson's voyage had such effect upon the statesmen of that time, that (in 1748) some sloops were fitted out for the fuller knowledge of Pepys's and Falkland's Islands, and for further discoveries in the South Sea. This expedition, though perhaps designed to be secret, was not long concealed from Wall, the Spanish ambassador, who so vehemently opposed it, and so strongly

maintained the right of the Spaniards to the exclusive dominion of the South Sea, that the English ministry relinquished part of their original design, and declared that the examination of those two islands was the utmost that their orders should comprise.

This concession was sufficiently liberal or sufficiently submissive, yet the Spanish court was neither gratified by our kindness, nor softened by our humility. Sir Benjamin Keene, who then resided at Madrid, was interrogated by Caivajal concerning the visit intended to Pepys's and Falkland's Islands, in terms of great jealousy and discontent; and the intended expedition was represented, if not as a direct violation of the late peace, yet as an act inconsistent with amicable intentions, and contrary to the professions of mutual kindness which then passed between Spain and England. Keene was directed to protest that nothing more than mere discovery was intended, and that no settlement was to be established. The Spaniard readily replied, that if this was a voyage of wanton curiosity, it might be gratified with less trouble, for he was willing to communicate whatever was known; that to go so far only to come back, was no reasonable act, and it would be a slender sacrifice to peace and friendship to omit a voyage in which nothing was to be gained that if we left the places as we found them, the voyage was useless; and if we took possession, it was a hostile armament, nor could we expect that the Spaniards would suppose us to visit the southern parts of America only from curiosity, after the scheme proposed by the author of Anson's voyage

When once we had disowned all purpose of settling, it is apparent that we could not defend the propriety of our expedition by arguments equivalent to Carvajal's objections. The ministry therefore *dismissed the whole design, but no declaration was required by which our right to pursue it hereafter might be annulled*

From this time Falkland's Island was forgotten or neglected, till the conduct of naval affairs was intrusted to the Earl of Egmont, a man whose mind was vigorous and ardent, whose knowledge was extensive, and whose designs were magnificent; but who had somewhat vitiated his judgment by too much indulgence of romantic projects and airy speculations

Lord Egmont's eagerness after something new determined him to make inquiry after Falkland's Island, and he sent out Captain Byron, who, in the beginning of the year 1765, took, he says, a formal possession in the name of his Britannick Majesty.

The possession of this place is, according to Mr. Byron's representation, no despicable acquisition. He conceived the island to be six or seven hundred miles round, and represented it as a region naked indeed of wood, but which, if that defect were supplied, would have all that nature, almost all that luxury could want. The harbour he found capacious and secure, and therefore thought it worthy of the name of Egmont. Of water there was no want, and the ground he described as having all the excellencies of soil, and as covered with antiscorbutick herbs, the restoratives of the sailor. Provision was easily to be had, for they killed almost

every day a hundred geese to each ship, by pelting them with stones. Not content with physick and with food, he searched yet deeper for the value of the new dominion. He dug in quest of ore, found iron in abundance, and did not despair of nobler metals.

A country thus fertile and delightful, fortunately found where none would have expected it, about the fiftieth degree of southern latitude, could not without great supineness be neglected. Early in the next year (January 8, 1766), Captain Macbride arrived at Port Egmont, where he erected a small blockhouse, and stationed a garrison. His description was less flattering. He found, what he calls, a mass of islands and broken lands, of which the soil was nothing but a bog, with no better prospect than that of barren mountains, beaten by storms almost perpetual. Yet this, says he, is summer, and if the winds of winter hold their natural proportion, those who lie but two cables length from the shore must pass weeks without any communication with it. The plenty which regaled Mr. Byron, and which might have supported not only armies, but armies of Patagons, was no longer to be found. The geese were too wise to stay when men violated their haunts, and Mr Macbride's crew could only now and then kill a goose when the weather would permit. All the quadrupeds which he met there were foxes, supposed by him to have been brought upon the ice, but of useless animals, such as sea-lions and penguins, which he calls vermin, the number was incredible. He allows, however, that those who touch at these islands may find

geese and snipes, and in the summer months, wild celery and sorrel.

No token was seen by either of any settlement ever made upon this island, and Mr. Macbride thought himself so secure from hostile disturbance, that when he erected his wooden blockhouse he omitted to open the ports and loopholes.

When a garrison was stationed at Port Egmont, it was necessary to try what sustenance the ground could be by culture excited to produce. A garden was prepared, but the plants that sprung up withered away in immaturity. Some fir-seeds were sown, but though this be the native tree of rugged climates, the young firs that rose above the ground did like weaker herbage. The cold continued long, and the ocean seldom was at rest.

Cattle succeeded better than vegetables. Goats, sheep, and hogs, that were carried thither, were found to thrive and increase as in other places.

Nil mortalibus arduum est. There is nothing which human courage will not undertake, and little that human patience will not endure. The garrison lived upon Falkland's Island, shrinking from the blast, and shuddering at the billows.

This was a colony which could never become independent, for it never could be able to maintain itself. The necessary supplies were annually sent from England, at an expense which the Admiralty began to think would not quickly be repaid. But shame of deserting a project, and unwillingness to contend with a projector that meant well, continued the garrison, and supplied it with regular remittances of stores and provision.

That of which we were almost weary ourselves, we did not expect any one to envy, and therefore supposed that we should be permitted to reside in Falkland's Island, the undisputed lords of tempest-beaten barrenness.

But on the 28th of November, 1769, Captain Hunt, observing a Spanish schooner hovering about the island, and surveying it, sent the commander a message, by which he required him to depart. The Spaniard made an appearance of obeying, but in two days came back with letters written by the governor of Port Solidad, and brought by the chief officer of a settlement on the east part of Falkland's Island.

In this letter, dated Malouina, November 30, the governor complains, that Captain Hunt, when he ordered the schooner to depart, assumed a power to which he could have no pretensions, by sending an imperious message to the Spaniards in the king of Spain's own dominions.

In another letter sent at the same time, he supposes the English to be in that part only by accident, and to be ready to depart at the first warning. This letter was accompanied by a present, of which, says he, *if it be neither equal to my desire nor to your merit, you must impute the deficiency to the situation of us both.*

In return to this hostile civility, Captain Hunt warned them from the island, which he claimed in the name of the king, as belonging to the English by right of the first discovery and the first settlement.

This was an assertion of more confidence than certainty. The right of discovery indeed has al-

ready appeared to be probable, but the right which priority of settlement confers I know not whether we yet can establish

On December 10, the officer sent by the governor of Port Solidad made three protests against Captain Hunt, for threatening to fire upon him, for opposing his entrance into Port Egmont; and for entering himself into Port Solidad. On the 12th the governor of Port Solidad formally warned Captain Hunt to leave Port Egmont, and to forbear the navigation of these seas, without permission from the king of Spain

To this Captain Hunt replied by repeating his former claim, by declaring that his orders were to keep possession; and by once more warning the Spaniards to depart.

The next month produced more protests and more replies, of which the tenour was nearly the same. The operations of such harmless enmity having produced no effect, were then reciprocally discontinued, and the English were left for a time to enjoy the pleasures of Falkland's Island without molestation

This tranquillity, however, did not last long. A few months afterwards (June 4, 1770), the *Industry*, a Spanish frigate, commanded by an officer whose name was Madariaga, anchored in Port Egmont, bound, as was said, for Port Solidad, and reduced, by a passage from Buenos Ayres of fifty-three days, to want of water.

Three days afterwards four other frigates entered the port, and a broad pendant, such as is borne by the commander of a naval armament, was displayed

from the Industry. Captain Farmer of the Swift frigate, who commanded the garrison, ordered the crew of the Swift to come on shore, and assist in its defence, and directed Captain Maltby to bring the Favourite frigate, which he commanded, nearer to the land. The Spaniards easily discovering the purpose of his motion, let him know, that if he weighed his anchor they would fire upon his ship; but paying no regard to these menaces, he advanced towards the shore. The Spanish fleet followed, and two shots were fired, which fell at a distance from him. He then sent to inquire the reason of such hostility, and was told that the shots were intended only as signals.

Both the English captains wrote the next day to Madariaga, the Spanish commodore, warning him from the island, as from a place which the English held by right of discovery.

Madariaga, who seems to have had no desire of unnecessary mischief, invited them (June 9) to send an officer who should take a view of his forces, that they might be convinced of the vanity of resistance, and do that without compulsion which he was, upon refusal, prepared to enforce.

An officer was sent, who found sixteen hundred men, with a train of twenty-seven cannon, four mortars, and two hundred bombs. The fleet consisted of five frigates, from twenty to thirty guns, which were now stationed opposite to the Block-house.

He then sent them a formal memorial, in which he maintained his master's right to the whole Magellanick region, and exhorted the English to retire

quietly from the settlement, which they could neither justify by right, nor maintain by power.

He offered them the liberty of carrying away whatever they were desirous to remove, and promised his receipt for what should be left, that no loss might be suffered by them

His propositions were expressed in terms of great civility, but he concludes with demanding an answer in fifteen minutes

Having while he was writing received the letters of warning written the day before by the English captains, he told them, that he thought himself able to prove the king of Spain's title to all those countries, but that this was no time for verbal altercations. He persisted in his determination, and allowed only fifteen minutes for an answer.

To this it was replied by Captain Farmer, that though there had been prescribed yet a shorter time, he should still resolutely defend his charge, that this, whether menace or force, would be considered as an insult to the British flag, and that satisfaction would certainly be required

On the next day (June 10) Madariaga landed his forces, and it may be easily imagined that he had no bloody conquest. The English had only a wooden blockhouse, built at Woolwich, and carried in pieces to the island, with a small battery of cannon. To contend with obstinacy had been only to lavish life without use or hope. After the exchange of a very few shots, a capitulation was proposed

The Spanish commander acted with moderation, he exerted little of the conqueror, what he had offered before the attack, he granted after the victory,

the English were allowed to leave the place with every honour, only their departure was delayed, by the terms of the capitulation, twenty days; and to secure their stay, the rudder of the *Favourite* was taken off. What they desired to carry away they removed without molestation, and of what they left an inventory was drawn, for which the Spanish officer by his receipt promised to be accountable.

Of this petty revolution, so sudden and so distant, the English ministry could not possibly have such notice as might enable them to prevent it. The conquest, if such it may be called, cost but three days, for the Spaniards, either supposing the garrison stronger than it was, or resolving to trust nothing to chance, or considering that, as their force was greater, there was less danger of bloodshed, came with a power that made resistance ridiculous, and at once demanded and obtained possession.

The first account of any discontent expressed by the Spaniards was brought by Captain Hunt, who, arriving at Plymouth, June 3, 1770, informed the Admiralty that the island had been claimed, in December, by the governor of Port Solidad.

This claim, made by an officer of so little dignity, without any known direction from his superiours, could be considered only as the zeal or officiousness of an individual, unworthy of publick notice, or the formality of remonstrance.

In August, Mr Harris, the resident at Madrid, gave notice to Lord Weymouth of an account newly brought to Cadiz, that the English were in possession of Port Cuizada, the same which we call Port Egmont, in the Magellanick sea; that in January

they had warned away two Spanish ships ; and that an armament was sent out in May, from Buenos Ayres, to dislodge them

It was perhaps not yet certain that this account was true , but the information, however faithful, was too late for prevention. It was easily known, that a fleet despatched in May had before August succeeded or miscarried

In October, Captain Maltby came to England, and gave the account which I have now epitomised, of his expulsion from Falkland's Islands.

From this moment the whole nation can witness that no time was lost The navy was surveyed, the ships refitted, and commanders appointed, and a powerful fleet was assembled, well manned and well stored, with expedition, after so long a peace, perhaps never known before, and with vigour which, after the waste of so long a war, scarcely any other nation had been capable of exerting.

This preparation, so illustrious in the eyes of Europe, and so efficacious in its event, was obstructed by the utmost power of that noisy faction which has too long filled the kingdom, sometimes with the roar of empty menace; and sometimes with the yell of hypocritical lamentation Every man saw, and every honest man saw with detestation, that they who desired to force their sovereign into war endeavoured at the same time to disable him from action

The vigour and spirit of the ministry easily broke through all the machinations of these pigmy rebels, and our armament was quickly such as was likely to make our negotiations effectual

The prince of Masseian, in his first conference with the English ministers on this occasion, owned that he had from Madrid received intelligence that the English had been forcibly expelled from Falkland's Island by Buccarelli, the governor of Buenos Ayres, without any particular orders from the king of Spain. But being asked, whether in his master's name he disavowed Buccarelli's violence, he refused to answer without direction.

The scene of negotiation was now removed to Madrid, and in September Mr. Harris was directed to demand from Grimaldi, the Spanish minister, the restitution of Falkland's Island, and a disavowal of Buccarelli's hostilities.

It was to be expected that Grimaldi would object to us our own behaviour, who had ordered the Spaniards to depart from the same island. To this it was replied, That the English forces were indeed directed to warn other nations away; but if compliance were refused, to proceed quietly in making their settlement, and suffer the subjects of whatever power to remain there without molestation. By possession thus taken, there was only a disputable claim advanced, which might be peaceably and regularly decided, without insult and without force, and if the Spaniards had complained at the British court, their reasons would have been heard, and all injuries redressed, but that, by presupposing the justice of their own title, and having recourse to arms, without any previous notice or remonstrance, they had violated the peace, and insulted the British government, and therefore it was expected that satisfac-

tion should be made by publick disavowal and immediate restitution

The answer of Grimaldi was ambiguous and cold. He did not allow that any particular orders had been given for driving the English from their settlement; but made no scruple of declaring, that such an ejection was nothing more than the settlers might have expected; and that Buccarelli had not, in his opinion, incurred any blame, as the general injunctions to the American governors were, to suffer no encroachments on the Spanish dominions.

In October the prince of Masseran proposed a convention for the accommodation of differences by mutual concessions, in which the warning given to the Spaniards by Hunt should be disavowed on one side, and the violence used by Buccarelli on the other. This offer was considered as little less than a new insult, and Grimaldi was told, that injury required reparation, that when either party had suffered evident wrong, there was not the parity subsisting which is implied in conventions and contracts, that we considered ourselves as openly insulted, and demanded satisfaction plenary and unconditional

Grimaldi affected to wonder that we were not yet appeased by their concessions. They had, he said, granted all that was required, they had offered to restore the island in the state in which they found it, but he thought that they likewise might hope for some regard, and that the warning sent by Hunt would be disavowed

Mr Harris, our minister at Madrid, insisted that the injured party had a right to unconditional repa-

ration, and Grimaldi delayed his answer, that a council might be called. In a few days orders were despatched to prince Masseran, by which he was commissioned to declare the king of Spain's readiness to satisfy the demands of the king of England, in expectation of receiving from him reciprocal satisfaction, by the disavowal, so often required, of Hunt's warning.

Finding the Spaniards disposed to make no other acknowledgments, the English ministry considered a war as not likely to be long avoided. In the latter end of November private notice was given of their danger to the merchants at Cadiz, and the officers absent from Gibraltar were remanded to their posts. Our naval force was every day increased, and we made no abatement of our original demand.

The obstinacy of the Spanish court still continued, and about the end of the year all hope of reconciliation was so nearly extinguished, that Mr. Harris was directed to withdraw, with the usual forms, from his residence at Madrid.

Moderation is commonly firm, and firmness is commonly successful; having not swelled our first requisition with any superfluous appendages, we had nothing to yield, we therefore only repeated our first proposition; prepared for war, though desirous of peace.

About this time, as is well known, the king of France dismissed Choiseul from his employments. What effect this revolution of the French court had upon the Spanish counsels, I pretend not to be informed. Choiseul had always professed pacifick dis-

positions, nor is it certain, however it may be suspected, that he talked in different strains to different parties.

It seems to be almost the universal error of historians to suppose it politically, as it is physically true, that every effect has a proportionate cause. In the inanimate action of matter upon matter, the motion produced can be but equal to the force of the moving power, but the operations of life, whether private or publick, admit no such laws. The caprices of voluntary agents laugh at calculation. It is not always that there is a strong reason for a great event. Obstinacy and flexibility, malignity and kindness, give place alternately to each other, and the reason of these vicissitudes, however important may be the consequences, often escapes the mind in which the change is made.

Whether the alteration which began in January to appear in the Spanish counsels, had any other cause than conviction of the impropriety of their past conduct, and of the danger of a new war, it is not easy to decide, but they began, whatever was the reason, to relax their haughtiness, and Mr. Harris's departure was countermanded.

The demands first made by England were still continued, and on January 22d, the prince of Masseran delivered a declaration, in which the king of Spain "disavows the violent enterprise of Buccarelli," and promises "to restore the port and fort called Egmont, with all the artillery and stores, according to the inventory."

To this promise of restitution is subjoined that

“ this engagement to restore Port Egmont cannot, nor ought, in any wise to affect the question of the prior right of sovereignty of the Malouine otherwise called Falkland's Islands ”

This concession was accepted by the Earl of Rochford, who declared on the part of his master that the prince of Masseran being authorized by his catholick majesty, “ to offer in his majesty's name to the king of Great Britain, a satisfaction for the injury done him by dispossessing him of Port Egmont,” and having signed a declaration expressing that his catholick majesty “ disavows the expedition against Port Egmont,” and engages to restore it in the state in which it stood before the 10th of June, 1770, his Britannick majesty will look upon the said declaration, together with the full performance of the engagement on the part of his catholick majesty, as a satisfaction for the injury done to the crown of Great Britain ”

This is all that was originally demanded The expedition is disavowed, and the island is restored An injury is acknowledged by the reception of Lord Rochford's paper, who twice mentions the word *injury* and twice the word *satisfaction*.

The Spaniards have stipulated that the grant of possession shall not preclude the question of prior right, a question which we shall probably make no haste to discuss, and a right of which no formal resignation was ever required This reserve has supplied matter for much clamour, and perhaps the English ministry would have been better pleased had the declaration been without it. But when we have obtained all that was asked, why should we

complain that we have not more ? When the possession is conceded, where is the evil that the right, which that concession supposes to be merely hypothetical, is referred to the Greek calends for a future disquisition ? Were the Switzers less free or less secure, because after their defection from the House of Austria they had never been declared independent before the treaty of Westphalia ? Is the king of France less a sovereign because the king of England partakes his title ?

~ If sovereignty implies undisputed right, scarce any prince is a sovereign through his whole dominions, if sovereignty consists in this, that no superiour is acknowledged, our king reigns at Port Egmont with sovereign authority. Almost every new acquired territory is in some degree controvertible, and till the controversy is decided, a term very difficult to be fixed, all that can be had is real possession and actual dominion

This surely is a sufficient answer to the feudal gabble of a man who is every day lessening that splendour of character which once illuminated the kingdom, then dazzled, and afterwards inflamed it ; and for whom it will be happy if the nation shall at last dismiss him to nameless obscurity, with that equipoise of blame and praise which Corneille allows to Richlieu, a man who, I think, had much of his merit, and many of his faults

Chacun parle a son gre de ce grand Cardinal,
 Mais pour moi je n'en dirai rien,
 Il m' a fait trop de bien pour en dire du mal,
 Il m' a fait trop de mal pour en dire du bien

To push advantages too far is neither generous nor just. Had we insisted on a concession of antecedent right, it may not misbecome us, either as moralists or politicians, to consider what Grimaldi could have answered. We have already, he might say, granted you the whole effect of right, and have not denied you the name. We have not said that the right was ours before this concession, but only that what right we had, is not by this concession vacated. We have now for more than two centuries ruled large tracts of the American continent, by a claim which perhaps is valid only upon this consideration, that no power can produce a better, by the right of discovery and prior settlement. And by such titles almost all the dominions of the earth are holden, except that their original is beyond memory, and greater obscurity gives them greater veneration. Should we allow this plea to be annulled, the whole fabrick of our empire shakes at the foundation. When you suppose yourselves to have first descried the disputed island, you suppose what you can hardly prove. We were at least the general discoverers of the Magellanick region, and have hitherto held it with all its adjacencies. The justice of this tenure the world has hitherto admitted, and yourselves at least tacitly allowed it, when about twenty years ago you desisted from your purposed expedition, and expressly disowned any design of settling, where you are now not content to settle and to reign, without extorting such a confession of original right, as may invite every other nation to follow you.

To considerations such as these, it is reasonable

to impute that anxiety of the Spaniards, from which the importance of this island is inferred by Junius, one of the few writers of his despicable faction whose name does not disgrace the page of an opponent. The value of the thing disputed may be very different to him that gains and him that loses it. The Spaniards, by yielding Falkland's Island, have admitted a precedent of what they think encroachment; have suffered a breach to be made in the outworks of their empire, and, notwithstanding the reserve of prior right, have suffered a dangerous exception to the prescriptive tenure of their American territories.

Such is the loss of Spain; let us now compute the profit of Britain. We have, by obtaining a disavowal of Buccarelli's expedition, and a restitution of our settlement, maintained the honour of the crown, and the superiority of our influence. Beyond this what have we acquired? What, but a bleak and gloomy solitude, an island thrown aside from human use, stormy in winter, and barren in summer, an island which not the southern savages have dignified with habitation. where a garrison must be kept in a state that contemplates with envy the exiles of Siberia, of which the expense will be perpetual, and the use only occasional, and which, if fortune smile upon our labours, may become a nest of smugglers in peace, and in war the refuge of future buccaniers. To all this the government has now given ample attestation, for the island has been since abandoned, and perhaps was kept only to quiet clamours, with an intention, not then wholly concealed, of quitting it in a short time

This is the country of which we have now possession, and of which a numerous party pretends to wish that we had murdered thousands for the titular sovereignty. To charge any men with such madness, approaches to an accusation defeated by its own incredibility. As they have been long accumulating falsehoods, it is possible that they are now only adding another to the heap, and that they do not mean all that they profess. But of this faction what evil may not be credited? They have hitherto shown no virtue, and very little wit, beyond that mischievous cunning for which it is held by Hale that children may be hanged.

As war is the last of remedies, *cuncta prius tentanda*, all lawful expedients must be used to avoid it. As war is the extremity of evil, it is surely the duty of those whose station intrusts them with the care of nations, to avert it from their charge. There are diseases of animal nature which nothing but amputation can remove; so there may, by the depravation of human passions, be sometimes a gangrene in collective life for which fire and the sword are the necessary remedies, but in what can skill or caution be better shown than preventing such dreadful operations, while there is yet room for gentler methods?

It is wonderful with what coolness and indifference the greater part of mankind see war commenced. Those that hear of it at a distance, or read of it in books, but have never presented its evils to their minds, consider it as little more than a splendid game, a proclamation, an army, a battle, and a triumph. Some indeed must perish in the most suc-

cessful field, but they die upon the bed of honour, “resign their lives amidst the joys of conquest, and, filled with England’s glory, smile in death.”

The life of a modern soldier is ill represented by heroick fiction. War has means of destruction more formidable than the cannon and the sword. Of the thousands and ten thousands that perished in our late contests with France and Spain, a very small part ever felt the stroke of an enemy; the rest languished in tents and ships, amidst damps and putrefaction; pale, torpid, spiritless, and helpless—gasping and groaning, unpitied among men, made obdurate by long continuance of hopeless misery; and were at last whelmed in pits, or heaved into the ocean, without notice and without remembrance. By incommodious encampments and unwholesome stations, where courage is useless, and enterprise impracticable, fleets are silently dispeopled, and armies sluggishly melted away.

Thus is a people gradually exhausted, for the most part, with little effect. The wars of civilized nations make very slow changes in the system of empire. The publick perceives scarcely any alteration but an increase of debt; and the few individuals who are benefited, are not supposed to have the clearest right to their advantages. If he that shared the danger enjoyed the profit, and after bleeding in the battle grew rich by the victory, he might show his gains without envy. But at the conclusion of a ten years’ war, how are we recompensed for the death of multitudes and the expense of millions, but by contemplating the sudden glories of paymasters and agents, contractors and commissaries, whose equipages shine

like meteors, and whose palaces rise like exhalations ?

These are the men who, without virtue, labour, or hazard, are growing rich as their country is impoverished, they rejoice when obstinacy or ambition adds another year to slaughter and devastation; and laugh from their desks at bravery and science, while they are adding figure to figure, and cipher to cipher, hoping for a new contract from a new armament, and computing the profits of a siege or tempest.

Those who suffer their minds to dwell on these considerations will think it no great crime in the ministry that they have not snatched with eagerness the first opportunity of rushing into the field, when they were able to obtain by quiet negotiation all the real good that victory could have brought us.

Of victory indeed every nation is confident before the sword is drawn, and this mutual confidence produces that wantonness of bloodshed that has so often desolated the world. But it is evident, that of contradictory opinions one must be wrong, and the history of mankind does not want examples that may teach caution to the daring, and moderation to the proud.

Let us not think our laurels blasted by condescending to inquire, whether we might not possibly grow rather less than greater by attacking Spain? Whether we should have to contend with Spain alone, whatever has been promised by our patriots, may very reasonably be doubted. A war declared for the empty sound of an ancient title to a Magellanick rock would raise the indignation of the earth

against us. These encroachers on the waste of nature, says our ally the Russian, if they succeed in their first effort of usurpation, will make war upon us for a title to Kamschatscha. These universal settlers, says our ally the Dane, will in a short time settle upon Greenland, and a fleet will batter Copenhagen, till we are willing to confess that it always was their own

In a quarrel like this, it is not possible that any power should favour us, and it is very likely that some would oppose us. The French, we are told, are otherwise employed; the contests between the king of France and his own subjects are sufficient to withhold him from supporting Spain. But who does not know that a foreign war has often put a stop to civil discords? It withdraws the attention of the publick from domestick grievances, and affords opportunities of dismissing the turbulent and restless to distant employments. The Spaniards have always an argument of irresistible persuasion. If France will not support them against England, they will strengthen England against France.

But let us indulge a dream of idle speculation, and suppose that we are to engage with Spain, and with Spain alone, it is not even yet very certain that much advantage will be gained. Spain is not easily vulnerable; her kingdom, by the loss or cession of many fragments of dominion, is become solid and compact. The Spaniards have indeed no fleet able to oppose us, but they will not endeavour actual opposition, they will shut themselves up in their own territories, and let us exhaust our seamen in a hopeless siege. They will give commissions to

privateers of every nation, who will prey upon our merchants without possibility of reprisal. If they think their plate fleet in danger, they will forbid it to set sail, and live a while upon the credit of treasure which all Europe knows to be safe, and which, if our obstinacy should continue till they can no longer be without it, will be conveyed to them with secrecy and security by our natural enemies the French, or by the Dutch our natural allies.

But the whole continent of Spanish America will lie open to invasion, we shall have nothing to do but march into these wealthy regions, and make their present masters confess that they were always ours by ancient right. We shall throw brass and iron out of our houses, and nothing but silver will be seen among us.

All this is very desirable, but it is not certain that it can be easily attained. Large tracts of America were added by the last war to the British dominions; but, if the faction credit their own Apollo, they were conquered in Germany. They at best are only the barren parts of the continent, the refuse of the earlier adventurers, which the French, who came last, had taken only as better than nothing.

Against the Spanish dominions we have never hitherto been able to do much. A few privateers have grown rich at their expense, but no scheme of conquest has yet been successful. They are defended not by walls mounted with cannons which by cannons may be battered, but by the storms of the deep and the vapours of the land, by the flames of calature and blasts of pestilence.

In the reign of Elizabeth, the favourite period

of English greatness, no enterprises against America had any other consequence than that of extending English navigation. Here Cavendish perished after all his hazards ; and here Drake and Hawkins, great as they were in knowledge and in fame, having promised honour to themselves and dominion to the country, sunk by desperation and misery in dishonourable graves.

During the protectorship of Cromwell, a time of which the patriotick tribes still more ardently desire the return, the Spanish dominions were again attempted ; but here, and only here, the fortune of Cromwell made a pause. His forces were driven from Hispaniola, his hopes of possessing the West Indies vanished, and Jamaica was taken, only that the whole expedition might not grow ridiculous.

The attack of Carthagená is yet remembered, where the Spaniards from the ramparts saw their invaders destroyed by the hostility of the elements ; poisoned by the air, and crippled by the dews ; where every hour swept away battalions ; and in the three days that passed between the descent and re-embarkation, half an army perished.

In the last war the Havanna was taken, at what expense is too well remembered. May my country be never cursed with such another conquest !

These instances of miscarriage, and these arguments of difficulty, may perhaps abate the military ardour of the publick. Upon the opponents of the government their operation will be different ; they wish for war, but not for conquest ; victory would defeat their purposes equally with peace, because prosperity would naturally continue trust in those

hands which had used it fortunately. The patriots gratified themselves with expectations that some sinistrous accident, or erroneous conduct, might diffuse discontent and inflame malignity. Their hope is malevolence, and their good is evil.

Of their zeal for their country we have already had a specimen. While they were terrifying the nation with doubts whether it was any longer to exist; while they represented invasive armies as hovering in the clouds, and hostile fleets as emerging from the deeps; they obstructed our levies of seamen, and embarrassed our 'endeavours of defence. Of such men he thinks with unnecessary candour who does not believe them likely to have promoted the miscarriage which they desired, by intimidating our troops or betraying our counsels.

It is considered as an injury to the publick by those sanguinary statesmen, that though the fleet has been refitted and manned, yet no hostilities have followed; and they who sat wishing for misery and slaughter are disappointed of their pleasure. But as peace is the end of war, it is the end likewise of preparations for war; and he may be justly hunted down as the enemy of mankind, that can choose to snatch by violence and bloodshed, what gentler means can equally obtain.

The ministry are reproached as not daring to provoke an enemy, lest ill success should discredit and displace them. I hope that they had better reasons, that they paid some regard to equity and humanity, and considered themselves as intrusted with the safety of their fellow-subjects, and as the

destroyers of all that should be superfluously slaughtered. But let us suppose that their own safety had some influence on their conduct, they will not, however, sink to a level with their enemies. Though the motive might be selfish, the act was innocent. They who grow rich by administering physick, are not to be numbered with them that get money by dispensing poison. If they maintain power by harmlessness and peace, they must for ever be at a great distance from ruffians who would gain it by mischief and confusion. The watch of a city may guard it for hire; but are well employed in protecting it from those who lie in wait to fire the streets and rob the houses amidst the conflagration.

An unsuccessful war would undoubtedly have had the effect which the enemies of the ministry so earnestly desire; for who could have sustained the disgrace of folly ending in misfortune? But had wanton invasion undeservedly prospered, had Falkland's Island been yielded unconditionally with every right prior and posterior; though the rabble might have shouted, and the windows have blazed, yet those who know the value of life, and the uncertainty of publick credit, would have murmured, perhaps unheard, at the increase of our debt and the loss of our people.

This thirst of blood, however the visible promoters of sedition may think it convenient to shrink from the accusation, is loudly avowed by Junius, the writer to whom his party owes much of its pride, and some of its popularity. Of Junius it cannot be said, as of Ulysses, that he scatters ambi-

guous expressions among the vulgar ; for he cries *havock* without reserve, and endeavours to let slip the dogs of foreign or of civil war, ignorant whither they are going, and careless what may be their prey.

Junius has sometimes made his satire felt, but let not injudicious admiration mistake the venom of the shaft for the vigour of the bow. He has sometimes sported with lucky malice, but to him that knows his company, it is not hard to be sarcastick in a mask. While he walks like Jack the Giant-killer in a coat of darkness, he may do much mischief with little strength. Novelty captivates the superficial and thoughtless, vehemence delights the discontented and turbulent. He that contradicts acknowledged truth will always have an audience; he that vilifies established authority will always find abettors.

Junius burst into notice with a blaze of impudence which has rarely glared upon the world before, and drew the rabble after him as a monster makes a show. When he had once provided for his safety by impenetrable secrecy, he had nothing to combat but truth and justice, enemies whom he knows to be feeble in the dark. Being then at liberty to indulge himself in all the immunities of invisibility, out of the reach of danger, he has been bold; out of the reach of shame, he has been confident. As a rhetorician, he has had the art of persuading when he seconded desire; as a reasoner, he has convinced those who had no doubt before, as a moralist, he has taught that virtue may disgrace; and as a patriot, he has gratified the mean by insults on the high. Finding sedition ascendant, he has been able to advance it;

finding the nation combustible, he has been able to inflame it. Let us abstract from his wit the vivacity of insolence, and withdraw from his efficacy the sympathetick favour of plebeian malignity, I do not say that we shall leave him nothing; the cause that I defend scorns the help of falsehood, but if we leave him only his merit, what will be his praise.

It is not by his liveliness of imagery, his pungency of periods, or his fertility of allusion, that he detains the cits of London, and the boors of Middlesex. Of style and sentiment they take no cognizance. They admire him for virtues like their own, for contempt of order and violence of outrage, for rage of defamation and audacity of falsehood. The supporters of the Bill of Rights feel no niceties of composition, nor dexterities of sophistry; their faculties are better proportioned to the bawl of Bellas, or barbarity of Beckford, but they are told that Junius is on their side, and they are therefore sure that Junius is infallible. Those who know not whither he would lead them, resolve to follow him; and those who cannot find his meaning, hope he means rebellion.

Junius is an unusual phænomenon, on which some have gazed with wonder and some with terrour, but wonder and terrour are transitory passions. He will soon be more closely viewed or more attentively examined, and what folly has taken for a comet that from its flaming hair shook pestilence and war, inquiry will find to be only a meteor formed by the vapours of putrefying democracy, and kindled into flame by the effervescence of interest struggling with conviction, which after having plunged its followers in a bog, will leave us inquiring why we regard it.

Yet though I cannot think the style of Junius secure from criticism, though his expressions are often trite, and his periods feeble, I should never have stationed him where he has placed himself, had I not rated him by his morals rather than his faculties. What, says Pope, must be the priest, where a monkey is the God? What must be the drudge of a party of which the heads are Wilkes and Crosby, Sanbridge and Townsend?

Junius knows his own meaning, and can therefore tell it. He is an enemy to the ministry; he sees them growing hourly stronger. He knows that a war at once unjust and unsuccessful would have certainly displaced them, and is therefore, in his zeal for his country, angry that war was not unjustly made, and unsuccessfully conducted. But there are others whose thoughts are less clearly expressed, and whose schemes perhaps are less consequentially digested, who declare that they do not wish for a rupture, yet condemn the ministry for not doing that, by which a rupture would naturally have been made.

If one party resolves to demand what the other resolves to refuse, the dispute can be determined only by arbitration, and between powers who have no common superiour, there is no other arbitrator than the sword.

Whether the ministry might not equitably have demanded more, is not worth a question. The utmost exertion of right is always invidious, and where claims are not easily determinable is always dangerous. We asked all that was necessary, and persisted in our first claim without mean recession,

or wanton aggravation The Spaniards found us resolute, and complied after a short struggle

The real crime of the ministry is, that they have found the means of avoiding their own ruin, but the charge against them is multifarious and confused, as will happen, when malice and discontent are ashamed of their complaint. The past and the future are complicated in the censure We have heard a tumultuous clamour about honour and rights, injuries and insults, the British flag, and the Favourite's rudder, Buccarelli's conduct and Grimaldi's declarations, the Manilla ransom, delays and reparation.

Through the whole argument of the faction runs the general error, that our settlement on Falkland's Island was not only lawful but unquestionable; that our right was not only certain but acknowledged; and that the equity of our conduct was such, that the Spaniards could not blame or obstruct it without combating their own conviction, and opposing the general opinion of mankind

If once it be discovered that, in the opinion of the Spaniards, our settlement was usurped, our claim arbitrary, and our conduct insolent, all that has happened will appear to follow by a natural concatenation. Doubts will produce disputes and disquisition, disquisition requires delay, and delay causes inconvenience

Had the Spanish government immediately yielded unconditionally all that was required, we might have been satisfied, but what would Europe have judged of their submission? that they shrunk before us as a conquered people, who having lately yielded to

our arms, were now compelled to sacrifice to our pride. The honour of the publick is indeed of high importance, but we must remember that we have had to transact with a mighty king and a powerful nation, who have unluckily been taught to think that they have honour to keep or lose as well as ourselves

When the Admiralty were told in June of the warning given to Hunt, they were, I suppose, informed that Hunt had first provoked it by warning away the Spaniards, and naturally considered one act of insolence as balanced by another, without expecting that more would be done on either side. Of representations and remonstrances there would be no end, if they were to be made whenever small commanders are uncivil to each other, nor could peace ever be enjoyed, if upon such transient provocations it be imagined necessary to prepare for war. We might then, it is said, have increased our force with more leisure and less inconvenience; but this is to judge only by the event. We omitted to disturb the publick, because we did not suppose that an armament would be necessary

Some months afterwards, as has been told, Bucarelli, the governor of Buenos Ayres, sent against the settlement of Port Egmont a force which ensured the conquest. The Spanish commander required the English captains to depart, but they thinking that resistance necessary which they knew to be useless, gave the Spaniards the right of prescribing terms of capitulation. The Spaniards imposed no new condition except that the sloop should

not sail under twenty days, and of this they secured the performance by taking off the rudder

To an inhabitant of the land there appears nothing in all this unreasonable or offensive. If the English intended to keep their stipulation, how were they injured by the detention of the rudder? If the rudder be to a ship what his tail is in fables to a fox, the part in which honour is placed, and of which the violation is never to be endured, I am sorry that the *Favourite* suffered an indignity, but cannot yet think it a cause for which nations should slaughter one another.

When Bucarelli's invasion was known, and the dignity of the crown infringed, we demanded reparation and prepared for war, and we gained equal respect by the moderation of our terms, and the spirit of our exertion. The Spanish minister immediately denied that Bucarelli had received any particular orders to seize Port Egmont, nor pretended that he was justified, otherwise than by the general instructions by which the American governors are required to exclude the subjects of other powers

To have inquired whether our settlement at Port Egmont was any violation of the Spanish rights, had been to enter upon a discussion which the pertinacity of political disputants might have continued without end. We therefore called for restitution, not as a confession of right, but as a reparation of honour, which required that we should be restored to our former state upon the island, and that the king of Spain should disavow the action of his governor.

In return to this demand, the Spaniards expected from us a disavowal of the menaces with which they had been first insulted by Hunt; and if the claim to the island be supposed doubtful, they certainly expected it with equal reason. This, however, was refused, and our superiority of strength gave validity to our arguments.

But we are told that the disavowal of the king of Spain is temporary and fallacious, that Buccarelli's armament had all the appearance of regular forces and a concerted expedition; and that he is not treated at home as a man guilty of piracy, or as disobedient to the orders of his master.

That the expedition was well planned, and the forces properly supplied, affords no proof of communication between the governor and his court. Those who are intrusted with the care of kingdoms in another hemisphere must always be trusted with power to defend them

As little can be inferred from his reception at the Spanish court. He is not punished indeed, for what has he done that deserves punishment? He was sent into America to govern and defend the dominions of Spain. He thought the English were encroaching, and drove them away. No Spaniard thinks that he has exceeded his duty, nor does the king of Spain charge him with excess. The boundaries of dominion in that part of the world have not yet been settled; and he mistook, if a mistake there was, like a zealous subject, in his master's favour.

But all this inquiry is superfluous. Considered as a reparation of honour, the disavowal of the

king of Spain, made in the sight of all Europe, is of equal value, whether true or false. There is indeed no reason to question its veracity, they, however, who do not believe it, must allow the weight of that influence by which a great prince is reduced to disown his own commission

But the general orders upon which the governor is acknowledged to have acted are neither disavowed nor explained. Why the Spaniards should disavow the defence of their own territories, the warmest disputant will find it difficult to tell, and if by an explanation is meant an accurate delineation of the southern empire, and the limitation of their claims beyond the line, it cannot be imputed to any very culpable remissness, that what has been denied for two centuries to the European powers was not obtained in a hasty wrangle about a petty settlement

The ministry were too well acquainted with negotiation to fill their heads with such idle expectations. The question of right was inexplicable and endless. They left it as it stood. To be restored to actual possession was easily practicable. This restoration they required and obtained.

But they should, say their opponents, have insisted upon more; they should have exacted not only reparation of our honour but repayment of our expense. Nor are they all satisfied with the recovery of the costs and damages of the present contest, they are for taking this opportunity of calling in old debts, and reviving our right to the ransom of Manila

The Manila ransom has, I think, been most

mentioned by the inferiour bellowers of sedition. Those who lead the faction know that it cannot be remembered much to their advantage. The followers of Lord Rockingham remember that his ministry began and ended without obtaining it; the adherents to Grenville would be told, that he could never be taught to understand our claim. The law of nations made little of his knowledge. Let him not, however, be depreciated in his grave. If he was sometimes wrong, he was often right.

Of reimbursement the talk has been more confident, though not more reasonable. The expenses of war have been often desired, have been sometimes required, but were never paid; or never, but when resistance was hopeless, and there remained no choice between submission and destruction.

Of our late equipments I know not from whom the charge can be very properly expected. The king of Spain disavows the violence which provoked us to arm, and for the mischiefs which he did not do, why should he pay? Buccarelli, though he had learned all the arts of an East Indian governor, could hardly have collected at Buenos Ayres a sum sufficient to satisfy our demands. If he be honest, he is hardly rich; and if he be disposed to rob, he has the misfortune of being placed where robbers have been before him.

The king of Spain indeed delayed to comply with our proposals, and our armament was made necessary by unsatisfactory answers and dilatory de-

bates. The delay certainly increased our expenses, and it is not unlikely that the increase of our expenses put an end to the delay.

But this is the inevitable process of human affairs. Negotiation requires time. What is not apparent to intuition must be found by inquiry. Claims that have remained doubtful for ages cannot be settled in a day. Reciprocal complaints are not easily adjusted but by reciprocal compliance. The Spaniards thinking themselves entitled to the island, and injured by Captain Hunt, in their turn demanded satisfaction, which was refused, and where is the wonder if their concessions were delayed? They may tell us, that an independent nation is to be influenced not by command, but by persuasion; that if we expect our proposals to be received without deliberation, we assume that sovereignty which they do not grant us; and that if we arm while they are deliberating, we must indulge our martial ardour at our own charge.

The English ministry asked all that was reasonable, and enforced all that they asked. Our national honour is advanced, and our interest, if any interest we have, is sufficiently secured. There can be none amongst us to whom this transaction does not seem happily concluded, but those who having fixed their hopes on publick calamities, sat like vultures waiting for a day of carnage. Having worn out all the arts of domestick sedition, having wearied violence, and exhausted falsehood, they yet flattered themselves with some assistance from the pride or malice of Spain; and when they could no longer make the people complain of grievances which they did not

feel, they had the comfort yet of knowing that real evils were possible, and their resolution is well known of charging all evil on their governors.

The reconciliation was therefore considered as the loss of their last anchor, and received not only with the fretfulness of disappointment but the rage of desperation. When they found that all were happy in spite of their machinations, and the soft effulgence of peace shone out upon the nation, they felt no motion but that of sullen envy, they could not, like Milton's prince of hell, abstract themselves a moment from their evil; as they have not the wit of Satan, they have not his virtue; they tried once again what could be done by sophistry without art, and confidence without credit. They represented their sovereign as dishonoured, and their country as betrayed, or, in their fiercer paroxysms of fury, reviled their sovereign as betraying it.

Their pretences I have here endeavoured to expose, by showing that more than has been yielded was not to be expected, that more perhaps was not to be desired, and that if all had been refused, there had scarcely been an adequate reason for a war.

There was perhaps never much danger of war or of refusal, but what danger there was proceeded from the faction. Foreign nations, unacquainted with the insolence of common councils, and unaccustomed to the howl of plebeian patriotism, when they heard of rabbles and riots, of petitions and remonstrances, of discontent in Surrey, Derbyshire, and Yorkshire, when they saw the chain of subordination broken, and the legislature threatened

and defied, naturally imagined that such a government had little leisure for Falkland's Island; they supposed that the English, when they returned ejected from Port Egmont, would find Wilkes invested with the protectorate; or see the Mayor of London, what the French have formerly seen their mayors of the palace, the commander of the army and tutor of the king; that they would be called to tell their tale before the common council, and that the world was to expect war or peace from a vote of the subscribers to the Bill of Rights.

But our enemies have now lost their hopes, and our friends I hope are recovered from their fears. To fancy that our government can be subverted by the rabble, whom its lenity has pampered into impudence, is to fear that a city may be drowned by the overflowing of its kennels. The distemper which cowardice or malice thought either decay of the vitals, or resolution of the nerves, appears at last to have been nothing more than a political phthisiasis, a disease too loathsome for a plainer name, but the effect of negligence rather than of weakness, and of which the shame is greater than the danger.

Among the disturbers of our quiet are some animals of greater bulk, whom their power of roaring persuaded us to think formidable, but we now perceive that sound and force do not always go together. The noise of a savage proves nothing but his hunger.

After all our broils, foreign and domestick, we may at last hope to remain a while in quiet, amused with the view of our own success. We have gained

political strength by the increase of our reputation; we have gained real strength by the reparation of our navy, we have shown Europe that ten years of war have not yet exhausted us; and we have enforced our settlement on an island on which twenty years ago we durst not venture to look.

These are the gratifications only of honest minds; but there is a time in which hope comes to all. From the present happiness of the publick the patriots themselves may derive advantage. To be harmless though by impotence obtains some degree of kindness; no man hates a worm as he hates a viper, they were once dreaded enough to be detested, as serpents that could bite, they have now shown that they can only hiss, and may therefore quietly slink into holes, and change their slough unmolested and forgotten.

THE
P A T R I O T.

ADDRESSED TO THE
ELECTORS OF GREAT BRITAIN

[1774.]

They bawl for freedom in their senseless mood,
Yet still revolt when truth would set them free,
Licence they mean, when they cry liberty,
For who loves that must first be wise and good
MILTON.

To improve the golden moment of opportunity, and catch the good that is within our reach, is the great art of life. Many wants are suffered, which might once have been supplied, and much time is lost in regretting the time which had been lost before.

At the end of every seven years comes the Saturnalian season, when the freemen of Great Britain may please themselves with the choice of their representatives. This happy day has now arrived, somewhat sooner than it could be claimed.

To select and depute those, by whom laws are to be made, and taxes to be granted, is a high dignity and an important trust and it is the business of

every elector to consider, how this dignity may be well sustained, and this trust faithfully discharged.

It ought to be deeply impressed on the minds of all who have voices in this national deliberation, that no man can deserve a seat in parliament who is not a patriot. No other man will protect our rights, no other man can merit our confidence.

A patriot is he whose publick conduct is regulated by one single motive, the love of his country; who, as an agent in parliament, has for himself neither hope nor fear, neither kindness nor resentment, but refers every thing to the common interest.

That of five hundred men, such as this degenerate age affords, a majority can be found thus virtuously abstracted, who will affirm? Yet there is no good in despondence: vigilance and activity often effect more than was expected. Let us take a patriot where we can meet him, and that we may not flatter ourselves by false appearances, distinguish those marks which are certain from those which may deceive for a man may have the external appearance of a patriot, without the constituent qualities, as false coins have often lustre, though they want weight.

Some claim a place in the list of patriots by an acrimonious and unremitting opposition to the court.

This mark is by no means infallible. Patriotism is not necessarily included in rebellion. A man may hate his king, yet not love his country. He that has been refused a reasonable or unreasonable

request, who thinks his merit under-rated, and sees his influence declining, begins soon to talk of natural equality, the absurdity of *many made for one*, the original compact, the foundation of authority, and the majesty of the people. As his political melancholy increases, he tells, and perhaps dreams, of the advances of the prerogative, and the dangers of arbitrary power; yet his design in all his declamation is not to benefit his country, but to gratify his malice.

These, however, are the most honest of the opponents of government, then patriotism is a species of disease, and they feel some part of what they express. But the greater, far the greater number of those who rave and rail, and inquire and accuse, neither suspect nor fear, nor care for the publick; but hope to force their way to riches by virulence and invective, and are vehement and clamorous, only that they may be sooner hired to be silent.

A man sometimes starts up a patriot, only by disseminating discontent and propagating reports of secret influence, of dangerous counsels, of violated rights and encroaching usurpation.

This practice is no certain note of patriotism. To instigate the populace with rage beyond the provocation, is to suspend publick happiness, if not to destroy it. He is no lover of his country, that unnecessarily disturbs its peace. Few errors, and few faults of government, can justify an appeal to the rabble, who ought not to judge of what they cannot understand, and whose opinions are not propagated by reason, but caught by contagion.

The fallaciousness of this note of patriotism is particularly apparent, when the clamour continues after the evil is past. They who are still filling our ears with Mr. Wilkes, and the freeholders of Middlesex, lament a grievance that is now at an end. Mr Wilkes may be chosen, if any will choose him, and the precedent of his exclusion makes not any honest, or any decent man, think himself in danger.

It may be doubted whether the name of a patriot can be fairly given as the reward of secret satire, or open outrage To fill the newspapers with sly hints of corruption and intrigue, to circulate the Middlesex Journal and London Paquet, may indeed be zeal; but it may likewise be interest and malice. To offer a petition, not expected to be granted; to insult a king with a rude remonstrance, only because there is no punishment for legal insolence, is not courage, for there is no danger; nor patriotism, for it tends to the subversion of order, and lets wickedness loose upon the land, by destroying the reverence due to sovereign authority

It is the quality of patriotism to be jealous and watchful, to observe all secret machinations, and to see publick dangers at a distance The true *lover of his country* is ready to communicate his fears and to sound the alarm, whenever he perceives the approach of mischief. But he sounds no alarm, when there is no enemy he never terrifies his countrymen till he is terrified himself. The patriotism therefore may be justly doubted of him, who professes to be disturbed by incredibilities, who tells, that the last peace was obtained by bribing the Princess of

Wales, that the king is grasping at arbitrary power; and that because the French in the new conquests enjoy their own laws, there is a design at court of abolishing in England the trial by juries

Still less does the true patriot circulate opinions which he knows to be false. No man, who loves his country, fills the nation with clamorous complaints, that the protestant religion is in danger, because *popery is established in the extensive province of Quebec*, a falsehood so open and shameless, that it can need no confutation among those who know that of which it is almost impossible for the most unenlightened zealot to be ignorant

That Quebec is on the other side of the Atlantick, at too great a distance to do much good or harm to the European world.

That the inhabitants, being French, were always papists, who are certainly more dangerous as enemies than as subjects.

That though the province be wide, the people are few, probably not so many as may be found in one of the larger English counties

That persecution is not more virtuous in a protestant than a papist, and that while we blame Lewis the Fourteenth, for his diagoons and his galleys, we ought, when power comes into our hands, to use it with greater equity

That when Canada with its inhabitants was yielded, the free enjoyment of their religion was stipulated, a condition, of which King William, who was no propagator of popery, gave an example nearer home, at the surrender of Limerick

That in an age, where every mouth is open for *liberty of conscience*, it is equitable to show some regard to the conscience of a papist, who may be supposed, like other men, to think himself safest in his own religion; and that those at least, who enjoy a toleration, ought not to deny it to our new subjects

If liberty of conscience be a natural right, we have no power to withhold it, if it be an indulgence, it may be allowed to papists, while it is not denied to other sects

A patriot is necessarily and invariably a lover of the people. But even this mark may sometimes deceive us

The people is a very heterogeneous and confused mass of the wealthy and the poor, the wise and the foolish, the good and the bad. Before we confer on a man, who caresses the people, the title of patriot, we must examine to what part of the people he directs his notice. It is proverbially said, that he who dissembles his own character may be known by that of his companions. If the candidate of patriotism endeavours to infuse right opinions into the higher ranks, and by their influence to regulate the lower; if he consorts chiefly with the wise, the temperate, the regular, and the virtuous, his love of the people may be rational and honest. But if his first or principal application be to the indigent, who are always inflammable, to the weak, who are naturally suspicious, to the ignorant, who are easily misled, and to the profligate, who have no hope but from mischief and confusion, let his love of the people be

no longer boasted. No man can reasonably be thought a lover of his country, for roasting an ox, or burning a boot, or attending the meeting at Mile-End, or registering his name in the lumber troop. He may, among the drunkards, be a *hearty fellow*, and among sober handicraftsmen, a *free-spoken gentleman*, but he must have some better distinction before he is a patriot.

A patriot is always ready to countenance the just claims, and animate the reasonable hopes of the people, he reminds them frequently of their rights, and stimulates them to resent encroachments, and to multiply securities

But all this may be done in appearance, without real patriotism. He that raises false hopes to serve a present purpose, only makes a way for disappointment and discontent. He who promises to endeavour, what he knows his endeavours unable to effect, means only to delude his followers by an empty clamour of ineffectual zeal.

A true patriot is no lavish promiser. he undertakes not to shorten parliaments; to repeal laws; or to change the mode of representation, transmitted by our ancestors. he knows that futurity is not in his power, and that all times are not alike favourable to change.

Much less does he make a vague and indefinite promise of obeying the mandates of his constituents. He knows the prejudices of faction, and the inconstancy of the multitude. He would first inquire, how the opinion of his constituents shall be taken. Popular instructions are commonly the work, not of

the wise and steady, but the violent and rash; meetings held for directing representatives are seldom attended but by the idle and the dissolute; and he is not without suspicion, that of his constituents, as of other numbers of men, the smaller part may often be the wiser.

He considers himself as deputed to promote the publick good, and to preserve his constituents, with the rest of his countrymen, not only from being hurt by others, but from hurting themselves

The common marks of patriotism having been examined, and shown to be such as artifice may counterfeit, or folly misapply, it cannot be improper to consider, whether there are not some characteristical modes of speaking or acting, which may prove a man to be *not a patriot*

In this inquiry, perhaps clearer evidence may be discovered, and firmer persuasion attained, for it is commonly easier to know what is wrong than what is right; to find what we should avoid, than what we should pursue

As war is one of the heaviest of national evils, a calamity in which every species of misery is involved, as it sets the general safety to hazard, suspends commerce, and desolates the country, as it exposes great numbers to hardships, dangers, captivity, and death, no man, who desires the publick prosperity, will inflame general resentment by aggravating minute injuries, or enforcing disputable rights of little importance

It may therefore be safely pronounced, that those men are no patriots, who when the national honour

was vindicated in the sight of Europe, and the Spaniards having invaded what they call their own, had shrunk to a disavowal of their attempt and a relaxation of their claim, would still have instigated us to a war for a bleak and barren spot in the Magellanick ocean, of which no use could be made, unless it were a place of exile for the hypocrites of patriotism

Yet let it not be forgotten, that by the howling violence of patriotick rage the nation was for a time exasperated to such madness, that for a barren rock, under a stormy sky, we might have now been fighting and dying, had not our competitors been wiser than ourselves, and those who are now courting the favour of the people by noisy professions of publick spirit, would, while they were counting the profits of their artifice, have enjoyed the patriotick pleasure of hearing sometimes, that thousands had been slaughtered in a battle, and sometimes that a navy had been dispeopled by poisoned air and corrupted food.

He that wishes to see his country robbed of its rights cannot be a patriot.

That man therefore is no patriot, who justifies the ridiculous claims of American usurpation, who endeavours to deprive the nation of its natural and lawful authority over its own colonies, those colonies, which were settled under English protection, were constituted by an English charter, and have been defended by English arms.

To suppose, that by sending out a colony, the nation established an independent power, that when, by indulgence and favour, emigrants are

become rich, they should not contribute to their own defence, but at their own pleasure; and that they shall not be included, like millions of their fellow-subjects, in the general system of representation; involves such an accumulation of absurdity, as nothing but the show of patriotism could palliate.

He that accepts protection, stipulates obedience. We have always protected the Americans; we may therefore subject them to government.

The less is included in the greater. That power which can take away life, may seize upon property. The parliament may enact for America a law of capital punishment; it may therefore establish a mode and proportion of taxation.

But there are some who lament the state of the poor Bostonians, because they cannot all be supposed to have committed acts of rebellion, yet all are involved in the penalty imposed. This, they say, is to violate the first rule of justice, by condemning the innocent to suffer with the guilty.

This deserves some notice, as it seems dictated by equity and humanity. However it may raise contempt, by the ignorance which it betrays of the state of man, and the system of things. That the innocent should be confounded with the guilty, is undoubtedly an evil; but it is an evil which no care or caution can prevent. National crimes require national punishment, of which many may necessarily have their part, who have not incurred them by personal guilt. If rebels should find a town, the centre of civil authority, and the seat of the barriers, burglers and the criminal, and the war had

In some cases, those suffer more than the war had
 terrified the heart. If the French

taken an English city, and permitted the natives to keep their dwellings, how could it have been recovered but by the slaughter of our friends? A bomb might as well destroy an Englishman as a Frenchman, and by famine we know that the inhabitants would be the first that should perish.

This infliction of promiscuous evil may therefore be lamented, but cannot be blamed. The power of lawful government must be maintained; and the miseries which rebellion produces can be charged only on the rebels.

That man likewise is *not a patriot*, who denies his governors their due praise, and who conceals from the people the benefits which they receive. Those therefore can lay no claim to this illustrious appellation, who impute want of publick spirit to the late parliament, an assembly of men, whom, notwithstanding some fluctuation of counsel, and some weakness of agency, the nation must always remember with gratitude, since it is indebted to them for a very ample concession in the resignation of protections, and a wise and honest attempt to improve the constitution, in the new judicature instituted for the trial of elections.

The right of protection, which might be necessary when it was first claimed, and was very consistent with that liberality of immunities in which the feudal constitution delighted, was by its nature liable to abuse, and had in reality been sometimes misapplied, to the evasion of the law and the defeat of justice. The evil was perhaps not adequate to the clamour; nor is it very certain, that the possible good of this privilege was not more than equal to the possible evil. It is however plain, that whether they

gave any thing or not to the publick, they at least lost something from themselves. They divested their dignity of a very splendid distinction, and showed that they were more willing than their predecessors to stand on a level with their fellow-subjects.

The new mode of trying elections, if it be found effectual, will diffuse its consequences further than seems yet to be foreseen. It is, I believe, generally considered as advantageous only to those who claim seats in parliament, but, if to choose representatives be one of the most valuable rights of Englishmen, every voter must consider that law as adding to his happiness, which makes his suffrage efficacious, since it was vain to choose, while the election could be controlled by any other power.

With what imperious contempt of ancient rights, and what audaciousness of arbitrary authority, former parliaments have judged the disputes about elections, it is not necessary to relate. The claim of a candidate, and the right of electors, are said scarcely to have been, even in appearance, referred to conscience, but to have been decided by party, by passion, by prejudice, or by frolick. To have friends in the borough was of little use to him, who wanted friends in the house; a pretence was easily found to evade a majority, and the seat was at last his, that was chosen not by his electors, but his fellow-senators.

Thus the nation was insulted with a mock election, and the parliament was filled with spurious representatives, one of the most important claims, that of right to sit in the supreme council of the kingdom, was debated in jest, and no man could be confident of success from the justice of his cause.

A disputed election is now tried with the same scrupulousness and solemnity as any other title. The candidate that has deserved well of his neighbours, may now be certain of enjoying the effect of their approbation; and the elector, who has voted honestly for known merit, may be certain that he has not voted in vain.

Such was the parliament, which some of those, who are now aspiring to sit in another, have taught the rabble to consider as an unlawful convention of men, worthless, venal, and prostitute, slaves of the court, and tyrants of the people.

That the next House of Commons may act upon the principles of the last, with more constancy and higher spirit, must be the wish of all who wish well to the publick; and it is surely not too much to expect that the nation will recover from its delusion, and unite in a general abhorrence of those who, by deceiving the credulous with fictitious mischiefs, overbearing the weak by audacity of falsehood, by appealing to the judgment of ignorance, and flattering the vanity of meanness, by slandering honesty and insulting dignity, have gathered round them whatever the kingdom can supply of base, and gross, and profligate; and *raised by merit to this bad eminence*, arrogate to themselves the name of *patriots*.

TAXATION NO TYRANNY;

AN

ANSWER

TO THE

RESOLUTIONS AND ADDRESS

OF THE

AMERICAN CONGRESS.

[1775.]

IN all the parts of human knowledge, whether terminating in science merely speculative, or operating upon life private or civil, are admitted some fundamental principles, or common axioms, which being generally received are little doubted, and being little doubted have been rarely proved.

Of these gratuitous and acknowledged truths it is often the fate to become less evident by endeavours to explain them, however necessary such endeavours may be made by the misapprehensions of absurdity, or the sophistries of interest. It is difficult to prove the principles of science, because notions cannot always be found more intelligible than those which are questioned. It is difficult to prove the principles of practice, because they have for the most part not been discovered by in-

vestigation, but obtruded by experience, and the demonstrator will find, after an operose deduction, that he has been trying to make that seen which can be only felt

Of this kind is the position, that *the supreme power of every community has the right of requiring from all its subjects such contributions as are necessary to the publick safety or publick prosperity*, which was considered by all mankind as comprising the primary and essential condition of all political society, till it became disputed by those zealots of anarchy, who have denied to the parliament of Britain the right of taxing the American colonies.

In favour of this exemption of the Americans from the authority of their lawful sovereign, and the dominion of their mother-country, very loud clamours have been raised, and many wild assertions advanced, which by such as borrow their opinions from the reigning fashion have been admitted as arguments, and what is strange, though their tendency is to lessen English honour, and English power, have been heard by Englishmen with a wish to find them true. Passion has in its first violence controlled interest, as the eddy for a while runs against the stream

To be prejudiced is always to be weak; yet there are prejudices so near to laudable, that they have been often praised, and are always pardoned. To love their country has been considered as virtue in men, whose love could not be otherwise than blind, because their preference was made without a comparison; but it has never been my fortune to find,

either in ancient or modern writers, any honourable mention of those, who have with equal blindness hated their country.

These antipatriotick prejudices are the abortions of folly impregnated by faction, which being produced against the standing order of nature, have not strength sufficient for long life. They are born only to scream and perish, and leave those to contempt or detestation, whose kindness was employed to nurse them into mischief.

To perplex the opinion of the publick many artifices have been used, which, as usually happens when falsehood is to be maintained by fraud, lose their force by counteracting one another.

The nation is sometimes to be mollified by a tender tale of men, who fled from tyranny to rocks and deserts, and is persuaded to lose all claims of justice, and all sense of dignity, in compassion for a harmless people, who having worked hard for bread in a wild country, and obtained by the slow progression of manual industry the accommodations of life, are now invaded by unprecedented oppression, and plundered of their properties by the harpies of taxation.

We are told how their industry is obstructed by unnatural restraints, and their trade confined by rigorous prohibitions, how they are forbidden to enjoy the products of their own soil, to manufacture the materials which nature spreads before them, or to carry their own goods to the nearest market. and surely the generosity of English virtue will never heap new weight upon those that are already overladen, will never delight in that do-

minion, which cannot be exercised but by cruelty and outrage.

But while we are melting in silent sorrow, and in the transports of delirious pity dropping both the sword and balance from our hands, another friend of the Americans thinks it better to awaken another passion, and tries to alarm our interest, or excite our veneration, by accounts of their greatness and their opulence of the fertility of their land, and the splendour of their towns. We then begin to consider the question with more evenness of mind, are ready to conclude that those restrictions are not very oppressive which have been found consistent with this speedy growth of prosperity; and begin to think it reasonable that they, who thus flourish under the protection of our government, should contribute something towards its expense.

But we are soon told that the Americans, however wealthy, cannot be taxed; that they are the descendants of men who left all for liberty, and that they have constantly preserved the principles and stubbornness of their progenitors; that they are too obstinate for persuasion, and too powerful for constraint, that they will laugh at argument, and defeat violence; that the continent of North America contains three millions not of men merely, but of Whigs, of Whigs fierce for liberty, and disdainful of dominion; that they multiply with the fecundity of their own rattlesnakes, so that every quarter of a century doubles their numbers

Men accustomed to think themselves masters do not love to be threatened. This talk is, I hope, commonly thrown away, or raises passions different

from those which it was intended to excite. Instead of terrifying the English hearer to tame acquiescence, it disposes him to hasten the experiment of bending obstinacy before it is become yet more obdurate, and convinces him that it is necessary to attack a nation thus profligate while we may yet hope to prevail. When he is told through what extent of territory we must travel to subdue them, he recollects how far, a few years ago, we travelled in their defence. When it is urged that they will shoot up like the hydra, he naturally considers how the hydra was destroyed

Nothing dejects a trader like the interruption of his profits. A commercial people, however magnanimous, shrinks at the thought of declining traffick, and an unfavourable balance. The effect of this terror has been tried. We have been stunned with the importance of our American commerce, and heard of merchants with warehouses that are never to be emptied, and of manufacturers starving for want of work.

That our commerce with America is profitable, however less than ostentatious or deceitful estimates have made it, and that it is our interest to preserve it, has never been denied; but surely it will most effectually be preserved, by being kept always in our own power. Concessions may promote it for a moment, but superiority only can ensure its continuance. There will always be a part, and always a very large part of every community that have no care but for themselves, and whose care for themselves reaches little farther than impatience of im-

mediate pain, and eagerness for the nearest good. The blind are said to feel with peculiar nicety. They who look but little into futurity have perhaps the quickest sensation of the present. A merchant's desire is not of glory, but of gain; not of publick wealth, but of private emolument; he is therefore rarely to be consulted about war and peace, or any designs of wide extent and distant consequence.

Yet this, like other general characters, will sometimes fail. The traders of Birmingham have rescued themselves from all imputation of narrow selfishness by a manly recommendation to parliament of the rights and dignity of their native country.

To these men I do not intend to ascribe an absurd and enthusiastick contempt of interest, but to give them the rational and just praise of distinguishing real from seeming good, of being able to see through the cloud of interposing difficulties, to the lasting and solid happiness of victory and settlement.

Lest all these topics of persuasion should fail, the great actor of patriotism has tried another, in which terror and pity are happily combined, not without a proper superaddition of that admiration which latter ages have brought into the drama. The heroes of Boston, he tells us, if the stamp act had not been repealed, would have left their town, their port, and their trade, have resigned the splendour of opulence, and quitted the delights of neighbourhood, to disperse themselves over the country, where they would till the ground, and

fish in the rivers, and range the mountains, AND BE FREE.

These surely are brave words. If the mere sound of freedom can operate thus powerfully, let no man hereafter doubt the story of the Pied Piper. *The removal of the people of Boston into the country*, seems even to the Congress not only *difficult in its execution*, but *important in its consequences*. The difficulty of execution is best known to the Bostonians themselves, the consequence, alas! will only be, that they will leave good houses to wiser men.

Yet before they quit the comforts of a warm home for the sounding something which they think better, he cannot be thought their enemy who advises them to consider well whether they shall find it. By turning fishermen or hunters, woodmen or shepherds, they may become wild, but it is not so easy to conceive them free, for who can be more a slave than he that is driven by force from the comforts of life, is compelled to leave his house to a casual comer, and whatever he does, or wherever he wanders, finds every moment some new testimony of his own subjection? If choice of evil be freedom, the felon in the galleys has his option of labour or of stripes. The Bostonian may quit his house to starve in the fields; his dog may refuse to set, and smart under the lash, and they may then congratulate each other upon the smiles of liberty, "profuse of bliss, and pregnant with delight."

To treat such designs as serious, would be to think too contemptuously of Bostonian understandings. The artifice indeed is not new. the blusterer who threatened in vain to destroy his opponent, has some-

contribution to the exigencies, whatever they may be, of the British empire: but they make this participation of the publick burthen a duty of very uncertain extent, and imperfect obligation, a duty temporary, occasional, and elective, of which they reserve to themselves the right of settling the degree, the time, and the duration, of judging when it may be required, and when it has been performed

They allow to the supreme power nothing more than the liberty of notifying to them its demands or its necessities. Of this notification they profess to think for themselves, how far it shall influence their counsels, and of the necessities alleged, how far they shall endeavour to relieve them. They assume the exclusive power of settling not only the mode, but the quantity of this payment. They are ready to co-operate with all the other dominions of the king, but they will co-operate by no means which they do not like, and at no greater charge than they are willing to bear.

This claim, wild as it may seem, this claim, which supposes dominion without authority, and subjects without subordination, has found among the libertines of policy many clamorous and hardy vindicators. The laws of nature, the rights of humanity, the faith of charters, the danger of liberty, the encroachments of usurpation, have been thundered in our ears, sometimes by interested faction, and sometimes by honest stupidity

It is said by Fontenelle, that if twenty philosophers shall resolutely deny that the presence of the sun makes the day, he will not despair but whole nations may adopt the opinion. So many political

their own swords their hopes and their lives, when they left their country, became another nation, with designs, and prospects, and interests, of their own. They looked back no more to their former home; they expected no help from those whom they had left behind; if they conquered, they conquered for themselves; if they were destroyed, they were not by any other power either lamented or revenged.

Of this kind seem to have been all the migrations of the early world, whether historical or fabulous, and of this kind were the eruptions of those nations which from the North invaded the Roman empire, and filled Europe with new sovereignties.

But when, by the gradual admission of wiser laws and gentler manners, society became more compacted and better regulated, it was found that the power of every people consisted in union, produced by one common interest, and operating in joint efforts and consistent counsels

From this time independence perceptibly wasted away. No part of the nation was permitted to act for itself. All now had the same enemies and the same friends, the government protected individuals, and individuals were required to refer their designs to the prosperity of the government

By this principle it is, that states are formed and consolidated Every man is taught to consider his own happiness as combined with the publick prosperity, and to think himself great and powerful in proportion to the greatness and power of his governors

Had the Western continent been discovered between the fourth and tenth century, when all the northern world was in motion, and had navigation been at that time sufficiently advanced to make so long a passage easily practicable, there is little reason for doubting but the intumescence of nations would have found its vent, like all other expansive violence, where there was least resistance; and that Huns and Vandals, instead of fighting their way to the south of Europe, would have gone by thousands and by myriads under their several chiefs to take possession of regions smiling with pleasure and waving with fertility, from which the naked inhabitants were unable to repel them.

Every expedition would in those days of laxity have produced a distinct and independent state. The Scandinavian heroes might have divided the country among them, and have spread the feudal subdivision of regality from Hudson's Bay to the Pacifick Ocean

But Columbus came five or six hundred years too late for the candidates of sovereignty. When he formed his project of discovery, the fluctuations of military turbulence had subsided, and Europe began to regain a settled form, by established government and regular subordination. No man could any longer erect himself into a chieftain, and lead out his fellow-subjects by his own authority to plunder or to war. He that committed any act of hostility by land or sea, without the commission of some acknowledged sovereign, was considered by all mankind as a robber or pirate, names which were

now of little credit, and of which therefore no man was ambitious

Columbus in a remoter time would have found his way to some discontented lord, or some younger brother of a petty sovereign, who would have taken fire at his proposal, and have quickly kindled with equal heat a troop of followers; they would have built ships, or have seized them, and have wandered with him at all adventures as far as they could keep hope in their company. But the age being now past of vagrant excursion and fortuitous hostility, he was under the necessity of travelling from court to court, scorned and repulsed as a wild projector, an idle promiser of kingdoms in the clouds: nor has any part of the world yet had reason to rejoice that he found at last reception and employment.

In the same year, in a year hitherto disastrous to mankind, by the Portuguese was discovered the passage of the Indies, and by the Spaniards the coast of America. The nations of Europe were fired with boundless expectations, and the discoverers pursuing their enterprise, made conquests in both hemispheres of wide extent. But the adventurers were contented with plunder; though they took gold and silver to themselves, they seized islands and kingdoms in the name of their sovereigns. When a new region was gained, a governor was appointed by that power which had given the commission to the conqueror; nor have I met with any European but Stukeley of London that formed a design of exalting himself in the newly found countries to independen

To secure a conquest, it was always necessary to plant a colony, and territories thus occupied and settled were rightly considered as mere extensions or processes of empire; as ramifications which, by the circulation of one publick interest, communicated with the original source of dominion, and which were kept flourishing and spreading by the radical vigour of the mother-country

The colonies of England differ no otherwise from those of other nations, than as the English constitution differs from theirs. All government is ultimately and essentially absolute, but subordinate societies may have more immunities, or individuals greater liberty, as the operations of government are differently conducted. An Englishman in the common course of life and action feels no restraint. An English colony has very liberal powers of regulating its own manners and adjusting its own affairs. But an English individual may by the supreme authority be deprived of liberty, and a colony divested of its powers, for reasons of which that authority is the only judge.

In sovereignty there are no gradations. There may be limited royalty, there may be limited consulship; but there can be no limited government. There must in every society be some power or other from which there is no appeal, which admits no restrictions, which pervades the whole mass of the community, regulates and adjusts all subordination, enacts laws or repeals them, erects or annuls judicatures, extends or contracts privileges, exempt itself from question or control, and bounded only by physical necessity.

By this power, wherever it subsists, all legislation and jurisdiction is animated and maintained. From this all legal rights are emanations, which, whether equitably or not, may be legally recalled. It is not infallible, for it may do wrong, but it is irresistible, for it can be resisted only by rebellion, by an act which makes it questionable what shall be thenceforward the supreme power.

An English colony is a number of persons, to whom the king grants a charter permitting them to settle in some distant country, and enabling them to constitute a corporation, enjoying such powers as the charter grants, to be administered in such forms as the charter prescribes. As a corporation they make laws for themselves, but as a corporation subsisting by a grant from higher authority, to the control of that authority they continue subject.

As men are placed at a greater distance from the supreme council of the kingdom, they must be intrusted with ampler liberty of regulating their conduct by their own wisdom. As they are more secluded from easy recourse to national judicature, they must be more extensively commissioned to pass judgment on each other.

For this reason our more important and opulent colonies see the appearance and feel the effect of a regular legislature, which in some places has acted so long with unquestioned authority, that it has forgotten whence that authority was originally derived.

To their charters the colonies owe, like other corporations, their political existence. The solemnities of legislation, the administration of justice,

the security of property, are all bestowed upon them by the royal grant. Without their charter there would be no power among them, by which any law could be made, or duties enjoined, any debt recovered, or criminal punished

A charter is a grant of certain powers or privileges given to a part of the community for the advantage of the whole, and is therefore liable by its nature to change or to revocation. Every act of government aims at publick good. A charter, which experience has shown to be detrimental to the nation, is to be repealed, because general prosperity must always be preferred to particular interest. If a charter be used to evil purposes, it is forfeited, as the weapon is taken away which is injuriously employed.

The charter therefore by which provincial governments are constituted may be always legally, and where it is either inconvenient in its nature, or misapplied in its use, may be equitably repealed, by such repeal the whole fabrick of subordination is immediately destroyed, and the constitution sunk at once into a chaos the society is dissolved into a tumult of individuals, without authority to command or obligation to obey; without any punishment of wrongs but by personal resentment, or any protection of right but by the hand of the possessor.

A colony is to the mother-country as a member to the body, deriving its action and its strength from the general principle of vitality, receiving from the body, and communicating to it, all the benefits and evils of health and disease, liable in dangerous

maladies to sharp applications, of which the body however must partake the pain; and exposed, if incurably tainted, to amputation, by which the body likewise will be mutilated.

The mother-country always considers the colonies thus connected as parts of itself; the prosperity or unhappiness of either is the prosperity or unhappiness of both; not perhaps of both in the same degree, for the body may subsist, though less commodiously, without a limb, but the limb must perish if it be parted from the body.

Our colonies, therefore, however distant, have been hitherto treated as constituent parts of the British empire. The inhabitants incorporated by English charters are entitled to all the rights of Englishmen. They are governed by English laws, entitled to English dignities, regulated by English counsels, and protected by English arms; and it seems to follow by consequence not easily avoided, that they are subject to English government, and chargeable by English taxation.

To him that considers the nature, the original, the progress, and the constitution of the colonies, who remembers that the first discoverers had commissions from the crown, that the first settlers owe to a charter their civil forms and regular magistracy; and that all personal immunities and legal securities by which the condition of the subject has been from time to time improved have been extended to the colonists, it will not be doubted but the parliament of England has a right to bind them by statutes, and *to bind them in all cases whatsoever*, and has therefore a natural and constitutional power of lay-

ing upon them any tax or impost, whether external or internal, upon the product of land, or the manufactures of industry, in the exigencies of war, or in the time of profound peace, for the defence of America, *for the purpose of raising a revenue*, or for any other end beneficial to the empire.

There are some, and those not inconsiderable for number, nor contemptible for knowledge, who except the power of taxation from the general dominion of parliament, and hold, that whatever degrees of obedience may be exacted, or whatever authority may be exercised in other acts of government, there is still reverence to be paid to money, and that legislation passes its limits when it violates the purse

Of this exception, which by a head not fully impregnated with politicks is not easily comprehended, it is alleged as an unanswerable reason, that the colonies send no representatives to the house of commons

It is, say the American advocates, the natural distinction of a freeman, and the legal privilege of an Englishman, that he is able to call his possessions his own, that he can sit secure in the enjoyment of inheritance or acquisition, that his house is fortified by the law, and that nothing can be taken from him but by his own consent. This consent is given for every man by his representative in parliament. The Americans unrepresented cannot consent to English taxations, as a corporation, and they will not consent as individuals

Of this argument, it has been observed by more than one, that its force extends equally to all other

laws, for a freeman is not to be exposed to punishment, or be called to any onerous service but by his own consent. The congress has extracted a position from the fanciful Montesquieu, that *in a free state every man being a free agent ought to be concerned in his own government*. Whatever is true of taxation is true of every other law, that he who is bound by it without his consent is not free, for he is not concerned in his own government.

He that denies the English parliament the right of taxation, denies it likewise the right of making any other laws civil or criminal, yet this power over the colonies was never yet disputed by themselves. They have always admitted statutes for the punishment of offences, and for the redress or prevention of inconveniencies, and the reception of any law draws after it, by a chain which cannot be broken, the unwelcome necessity of submitting to taxation.

That a free man is governed by himself, or by laws to which he has consented, is a position of mighty sound but every man that utters it, with whatever confidence, and every man that hears it, with whatever acquiescence, if consent be supposed to imply the power of refusal, feels it to be false. We virtually and implicitly allow the institutions of any government of which we enjoy the benefit, and solicit the protection. In wide-extended dominions, though power has been diffused with the most even hand, yet a very small part of the people are either primarily or secondarily consulted in legislation. The business of the publick must be done by delegation. The choice of delegates is made by a select number, and those who are not electors stand idle

and helpless spectators of the commonweal, *wholly unconcerned in the government of themselves*

Of electors the hap is but little better They are often far from unanimity in their choice, and where the numbers approach to equality, almost half must be governed not only without, but against their choice.

How any man can have consented to institutions established in distant ages, it will be difficult to explain. In the most favourite residence of liberty, the consent of individuals is merely passive, a tacit admission in every community of the terms which that community grants and requires As all are born the subjects of some state or other, we may be said to have been all born consenting to some system of government. Other consent than this, the condition of civil life does not allow It is the unmeaning clamour of the pedants of policy, the delirious dream of republican fanaticism

But hear, ye sons and daughters of liberty, the sounds which the winds are wafting from the Western continent The Americans are telling one another, what, if we may judge from their noisy triumph, they have but lately discovered, and what yet is a very important truth; *That they are entitled to life, liberty, and property, and that they have never ceded to any sovereign power whatever a right to dispose of either without their consent*

While this resolution stands alone, the Americans are free from singularity of opinion, their wit has not yet betrayed them to heresy. While they speak as the naked sons of nature, they claim but what is claimed by other men, and have withheld nothing

but what all withhold. They are here upon firm ground, behind entrenchments which never can be forced.

Humanity is very uniform. The Americans have this resemblance to Europeans, that they do not always know when they are well. They soon quit the fortress that could neither have been mined by sophistry, nor battered by declamation. Their next resolution declares, that *their ancestors, who first settled the colonies, were, at the time of their emigration from the mother-country, entitled to all the rights, liberties, and immunities of free and natural-born subjects within the realm of England*

This likewise is true; but when this is granted, their boast of original rights is at an end, they are no longer in a state of nature. These lords of themselves, these kings of *me*, these demigods of independence, sink down to colonists, governed by a charter. If their ancestors were subjects, they acknowledged a sovereign. if they had a right to English privileges, they were accountable to English laws, and what must grieve the lover of liberty to discover, had ceded to the king and parliament, whether the right or not, at least the power of disposing *without their consent, of their lives, liberties, and properties*. It therefore is required of them to prove, that the parliament ever ceded to them a dispensation from that obedience, which they owe as natural-born subjects, or any degree of independence or immunity not enjoyed by other Englishmen.

They say, That by such emigration they by no means forfeited, surrendered, or lost any of those rights; but that *they were, and their descendants now*

are, entitled to the exercise and enjoyment of all such of them as their local and other circumstances enable them to exercise and enjoy.

That they who form a settlement by a lawful charter having committed no crime forfeit no privileges, will be readily confessed but what they do not forfeit by any judicial sentence, they may lose by natural effects. As man can be but in one place at once, he cannot have the advantages of multiplied residence. He that will enjoy the brightness of sunshine, must quit the coolness of the shade. He who goes voluntarily to America, cannot complain of losing what he leaves in Europe. He perhaps had a right to vote for a knight or burgess, by crossing the Atlantick he has not nullified his right, but he has made its exertion no longer possible*. By his own choice he has left a country where he had a vote and little property, for another where he has great property but no vote. But as this preference was deliberate and unconstrained, he is still *concerned in the government of himself*; he has reduced himself from a voter to one of the innumerable multitude that have no vote. He has truly *ceded his right*, but he still is governed by his own consent, because he has consented to throw his atom of interest into the general mass of the community. Of the consequences of his own act he has no cause to complain, he has chosen, or intended to choose, the greater good, he is represented, as himself desired, in the general representation

* Of this reasoning, I owe part to a conversation with Sir John Hawkins

But the privileges of an American scorn the limits of place, they are part of himself, and cannot be lost by departure from his country; they float in the air, or glide under the ocean.

Doris amara suam non intermisceat undam

A planter, wherever he settles, is not only a free-man, but a legislator, *ubi imperator, ibi Roma*. As the English colonists are not represented in the British parliament, they are entitled to a free and exclusive power of legislation in their several legislatures, in all cases of taxation and internal polity, subject only to the negative of the sovereign, in such manner as has been heretofore used and accustomed. We cheerfully consent to the operation of such acts of the British parliament as are bona fide restrained to the regulation of our external commerce—excluding every idea of taxation, internal, or external, for raising a revenue on the subjects of America without their consent

Their reason for this claim is, *That the foundation of English liberty, and of all government, is a right in the people to participate in their legislative council*

They inherit, they say, from their ancestors, the right which their ancestors possessed, of enjoying all the privileges of Englishmen. That they inherit the right of their ancestors is allowed; but they can inherit no more. Their ancestors left a country where the representatives of the people were elected by men particularly qualified, and where those who wanted qualifications, or who did not use them, were bound by the decisions of men whom they had not deputed.

The colonists are the descendants of men who either had no vote in elections, or who voluntarily resigned them for something, in their opinion, of more estimation: they have, therefore, exactly what their ancestors left them, not a vote in making laws, or in constituting legislators, but the happiness of being protected by law, and the duty of obeying it.

What their ancestors did not carry with them, neither they nor their descendants have since acquired. They have not, by abandoning their part in one legislature, obtained the power of constituting another, exclusive and independent, any more than the multitudes, who are now debarred from voting, have a right to erect a separate parliament for themselves.

Men are wrong for want of sense, but they are wrong by halves for want of spirit. Since the Americans have discovered that they can make a parliament, whence comes it that they do not think themselves equally empowered to make a king? If they are subjects whose government is constituted by a charter, they can form no body of independent legislature. If their rights are inherent and underived, they may, by their own suffrages, encircle with a diadem the brows of Mr. Cushing.

It is farther declared, by the congress of Philadelphia, *That his majesty's colonies are entitled to all the privileges and immunities granted and confirmed to them by royal charters, or secured to them by their several codes of provincial laws.*

The first clause of this resolution is easily understood, and will be readily admitted. To all the privileges which a charter can convey, they are by

a royal charter evidently entitled. The second clause is of greater difficulty, for how can a provincial law secure privileges or immunities to a province? Provincial laws may grant to certain individuals of the province the enjoyment of gainful, or an immunity from onerous offices, they may operate upon the people to whom they relate; but no province can confer provincial privileges on itself. They may have a right to all which the king has given them; but it is a conceit of the other hemisphere, that men have a right to all which they have given to themselves.

A corporation is considered in law as an individual, and can no more extend its own immunities, than a man can by his own choice assume dignities or titles.

The legislature of a colony, let not the comparison be too much disdained, is only the vestry of a larger parish, which may lay a cess on the inhabitants, and enforce the payment; but can extend no influence beyond its own district, must modify its particular regulations by the general law, and whatever may be its internal expenses, is still liable to taxes laid by superior authority.

The charters given to different provinces are different, and no general right can be extracted from them. The charter of Pennsylvania, where this congress of anarchy has been impudently held, contains a clause admitting, in express terms, taxation by the parliament. If in the other charters no such reserve is made, it must have been omitted as not necessary, because it is implied in the nature of subordinate government. They who are subject

to laws, are liable to taxes. If any such immunity had been granted, it is still revocable by the legislature, and ought to be revoked, as contrary to the publick good, which is in every charter ultimately intended.

Suppose it true that any such exemption is contained in the charter of Maryland, it can be pleaded only by the Marylanders. It is of no use for any other province, and with regard even to them, must have been considered as one of the grants in which the king has been deceived, and annulled as mischievous to the publick, by sacrificing to one little settlement the general interest of the empire, as infringing the system of dominion, and violating the compact of government. But Dr Tucker has shown, that even this charter promises no exemption from parliamentary taxes.

In the controversy agitated about the beginning of this century, whether the English laws could bind Ireland, Davenant, who defended, against Molyneux, the claims of England, considered it as necessary to prove nothing more than that the present Irish must be deemed a colony.

The necessary connexion of representatives with taxes, seems to have sunk deep into many of those minds that admit sounds without their meaning.

Our nation is represented in parliament by an assembly as numerous as can well consist with order and despatch, chosen by persons so differently qualified in different places, that the mode of choice seems to be, for the most part, formed by chance, and settled by custom. Of individuals far the greater part have no vote, and of the voters few

have any personal knowledge of him to whom they intrust their liberty and fortune

Yet this representation has the whole effect expected or desired, that of spreading so wide the care of general interest, and the participation of publick counsels, that the advantage or corruption of particular men can seldom operate with much injury to the publick

For this reason many populous and opulent towns neither enjoy nor desire particular representatives; they are included in the general scheme of publick administration, and cannot suffer but with the rest of the empire.

It is urged that the Americans have not the same security, and that a British legislator may wanton with their property; yet if it be true, that their wealth is our wealth, and that their ruin will be our ruin, the parliament has the same interest in attending to them, as to any other part of the nation. The reason why we place any confidence in our representatives is, that they must share in the good or evil which their counsels shall produce. Their share is, indeed, commonly consequential and remote; but it is not often possible that any immediate advantage can be extended to such numbers as may prevail against it. We are, therefore, as secure against intentional depravations of government as human wisdom can make us, and upon this security the Americans may venture to repose.

It is said by the Old Member, who has written an *Appeal* against the tax, that *as the produce of American labour is spent in British manufactures, the balance of trade is greatly against them, what-*

ever you take directly in taxes is, in effect, taken from your own commerce. If the minister seizes the money with which the American should pay his debts and come to market, the merchant cannot expect him as a customer, nor can the debts already contracted be paid.—Suppose we obtain from America a million instead of one hundred thousand pounds, it would be supplying one personal exigence by the future ruin of our commerce.

Part of this is true, but the Old Member seems not to perceive, that if his brethren of the legislature know this as well as himself, the Americans are in no danger of oppression, since by men commonly provident they must be so taxed, as that we may not lose one way what we gain another.

The same Old Member has discovered that the judges formerly thought it illegal to tax Ireland, and declares that no cases can be more alike than those of Ireland and America: yet the judges whom he quotes have mentioned a difference. Ireland, they say, *hath a parliament of its own*. When any Colony has an independent parliament acknowledged by the parliament of Britain, the cases will differ less. Yet by the 6 Geo. I, chap 5, the acts of the British parliament bind Ireland.

It is urged that when Wales, Durham, and Chester, were divested of their particular privileges, or ancient government, and reduced to the state of English counties, they had representatives assigned them.

To those from whom something had been taken, something in return might properly be given. To the Americans their charters are left as they were.

nor have they lost any thing except that of which their sedition has deprived them. If they were to be represented in parliament, something would be granted, though nothing is withdrawn.

The inhabitants of Chester, Durham, and Wales, were invited to exchange their peculiar institutions for the power of voting, which they wanted before. The Americans have voluntarily resigned the power of voting, to live in distant and separate governments, and what they have voluntarily quitted, they have no right to claim.

It must always be remembered, that they are represented by the same virtual representation as the greater part of Englishmen, and that if by change of place they have less share in the legislature than is proportionate to their opulence, they by their removal gained that opulence, and had originally, and have now, their choice of a vote at home, or riches at a distance.

We are told, what appears to the Old Member and to others a position that must drive us into inextricable absurdity, that we have either no right, or the sole right of taxing the colonies. The meaning is, that if we can tax them, they cannot tax themselves, and that if they can tax themselves, we cannot tax them. We answer with very little hesitation, that for the general use of the empire we have the sole right of taxing them. If they have contributed any thing in their own assemblies, what they contributed was not paid but given; it was not a tax or tribute, but a present. Yet they have the natural and legal power of levying money on themselves for provincial purposes,

of providing for their own expense, at their own discretion. Let not this be thought new or strange, it is the state of every parish in the kingdom.

The friends of the Americans are of different opinions. Some think that being unrepresented they ought to tax themselves, and others that they ought to have representatives in the British parliament.

If they are to tax themselves, what power is to remain in the supreme legislature? That they must settle their own mode of levying their money is supposed. May the British parliament tell them how much they shall contribute? If the sum may be prescribed, they will return few thanks for the power of raising it, if they are at liberty to grant or to deny, they are no longer subjects.

If they are to be represented, what number of these western orators are to be admitted? This I suppose the parliament must settle, yet if men have a natural and unalienable right to be represented, who shall determine the number of their delegates? Let us, however, suppose them to send twenty-three, half as many as the kingdom of Scotland, what will this representation avail them? To pay taxes will be still a grievance. The love of money will not be lessened, nor the power of getting it increased.

Whither will this necessity of representation drive us? Is every petty settlement to be out of the reach of government, till it has sent a senator to parliament, or may two of them or a greater number be forced to unite in a single deputation? What at last is the difference between him that is

taxed by compulsion without representation, and him that is represented by compulsion in order to be taxed?

For many reigns the house of commons was in a state of fluctuation new burgesses were added from time to time, without any reason now to be discovered, but the number has been fixed for more than a century and a half, and the king's power of increasing it has been questioned. It will hardly be thought fit to new-model the constitution in favour of the planters, who, as they grow rich, may buy estates in England, and, without any innovation, effectually represent their native colonies

The friends of the Americans indeed ask for them what they do not ask for themselves. This inestimable right of representation they have never solicited. They mean not to exchange solid money for such airy honour. They say, and say willingly, that they cannot conveniently be represented, because their inference is, that they cannot be taxed. They are too remote to share the general government, and therefore claim the privilege of governing themselves.

Of the principles contained in the resolutions of the congress, however wild, indefinite, and obscure, such has been the influence upon American understanding, that from New England to South Carolina there is formed a general combination of all the provinces against their mother-country. The madness of independence has spread from colony to colony, till order is lost and government despised, and all is filled with misrule, uproar, violence, and confusion. To be quiet is disaffection, to be loyal is treason

The congress of Philadelphia, an assembly convened by its own authority, has promulgated a declaration, in compliance with which the communication between Britain and the greatest part of North America is now suspended. They ceased to admit the importation of English goods in December, 1774, and determine to permit the exportation of their own no longer than to November, 1775.

This might seem enough, but they have done more. They have declared, that they shall treat all as enemies who do not concur with them in disaffection and perverseness, and that they will trade with none that shall trade with Britain.

They threaten to stigmatize in their gazette those who shall consume the products or merchandise of their mother-country, and are now searching suspected houses for prohibited goods.

These hostile declarations they profess themselves ready to maintain by force. They have armed the militia of their provinces, and seized the publick stores of ammunition. They are, therefore, no longer subjects, since they refuse the laws of their sovereign, and in defence of that refusal are making open preparations for war.

Being now in their own opinion free states, they are not only raising armies, but forming alliances, not only hastening to rebel themselves, but seducing their neighbours to rebellion. They have published an address to the inhabitants of Quebec, in which discontent and resistance are openly incited, and with very respectful mention of *the sagacity of Frenchmen*, invite them to send deputies to the congress of Philadelphia, to that seat of virtue and veracity, whence the people of England

are told, that to establish popery, *a religion fraught with sanguinary and impious tenets*, even in Quebec, a country of which the inhabitants are papists, is so contrary to the constitution, that it cannot be lawfully done by the legislature itself; where it is made one of the articles of their association, to deprive the conquered French of their religious establishment, and whence the French of Quebec are, at the same time, flattered into sedition, by professions of expecting, *from the liberality of sentiment distinguishing their nation*, that *difference of religion will not prejudice them against a hearty amity*, because *the transcendent nature of freedom elevates all who unite in the cause, above such low-minded infirmities*

Quebec, however, is at a great distance They have aimed a stroke from which they may hope for greater and more speedy mischief They have tried to infect the people of England with the contagion of disloyalty. Their credit is happily not such as gives them influence proportionate to their malice When they talk of their pretended immunities *guarantied by the plighted faith of government, and the most solemn compacts with English sovereigns*, we think ourselves at liberty to inquire when the faith was plighted and the compact made, and when we can only find that king James and king Charles the First promised the settlers in Massachusetts's Bay, now famous by the appellation of Bostonians, exemption from taxes for seven years, we infer with Mr. Mauduit, that by this *solemn compact*, they were, after expiration of the stipulated term, liable to taxation

When they apply to our compassion, by telling

us, that they are to be carried from their own country to be tried for certain offences, we are not so ready to pity them, as to advise them not to offend. While they are innocent they are safe.

When they tell of laws made expressly for their punishment, we answer, that tumults and sedition were always punishable, and that the new law prescribes only the mode of execution.

When it is said that the whole town of Boston is distressed for a misdemeanour of a few, we wonder at their shamefulness; for we know that the town of Boston, and all the associated provinces, are now in rebellion to defend or justify the criminals.

If frauds in the imposts of Boston are tried by commission without a jury, they are tried here in the same mode, and why should the Bostonians expect from us more tenderness for them than for ourselves?

If they are condemned unheard, it is because there is no need of a trial. The crime is manifest and notorious. All trial is the investigation of something doubtful. An Italian philosopher observes, that no man desires to hear what he has already seen.

If their assemblies have been suddenly dissolved, what was the reason? Their deliberations were indecent, and their intentions seditious. The power of dissolution is granted and reserved for such times of turbulence. Their best friends have been lately soliciting the king to dissolve his parliament, to do what they so loudly complain of suffering.

That the same vengeance involves the innocent and guilty is an evil to be lamented, but human

caution cannot prevent it, nor human power always redress it To bring misery on those who have not deserved it, is part of the aggregated guilt of rebellion.

That governors have been sometimes given them only that a great man might get ease from importunity, and that they have had judges not always of the deepest learning, or the purest integrity, we have no great reason to doubt, because such misfortunes happen to ourselves Whoever is governed will sometimes be governed ill, even when he is most concerned in *his own government*

That improper officers or magistrates are sent, is the crime or folly of those that sent them When incapacity is discovered, it ought to be removed; if corruption is detected, it ought to be punished No government could subsist for a day, if single errors could justify defection

One of their complaints is not such as can claim much commiseration from the softest bosom They tell us, that we have changed our conduct, and that a tax is now laid by parliament on those who were never taxed by parliament before To this we think it may be easily answered, that the longer they have been spared, the better they can pay.

It is certainly not much their interest to represent innovation as criminal or invidious, for they have introduced into the history of mankind a new mode of disaffection, and have given, I believe, the first example of a proscription published by a colony against the mother-country

To what is urged of new powers granted to the courts of admiralty, or the extension of authority

conferred on the judges, it may be answered in a few words, that they have themselves made such regulations necessary, that they are established for the prevention of greater evils; at the same time, it must be observed, that these powers have not been extended since the rebellion in America

One mode of persuasion then ingenuity has suggested, which it may perhaps be less easy to resist. That we may not look with indifference on the American contest, or imagine that the struggle is for a claim, which, however decided, is of small importance and remote consequence, the Philadelphian congress has taken care to inform us, that they are resisting the demands of parliament, as well for our sakes as their own.

Their keenness of perspicacity has enabled them to pursue consequences to a greater distance, to see through clouds impervious to the dimness of European sight; and to find, I know not how, that when they are taxed, we shall be enslaved.

That slavery is a miserable state we have been often told, and doubtless many a Briton will tremble to find it so near as in America, but how it will be brought hither, the congress must inform us. The question might distress a common understanding; but the statesmen of the other hemisphere can easily resolve it. Our ministers, they say, are our enemies, and *if they should carry the point of taxation, may with the same army enslave us*. It may be said we will not pay them, but remember, say the western sages, *the taxes from America, and we may add the men, and particularly the Roman Catholics of this vast continent, will*

then be in the power of your enemies Nor have you any reason to expect, that after making slaves of us, many of us will refuse to assist in reducing you to the same abject state.

These are dreadful menaces, but suspecting that they have not much the sound of probability, the congress proceeds. *Do not treat this as chimerical Know that in less than half a century the quit rents reserved to the crown from the numberless grants of this vast continent, will pour large streams of wealth into the royal coffers. If to this be added the power of taxing America at pleasure, the crown will possess more treasure than may be necessary to purchase the remains of liberty in your island.*

All this is very dreadful, but amidst the terror that shakes my frame, I cannot forbear to wish that some sluice were opened for these streams of treasure I should gladly see America return half of what England has expended in her defence, and of the stream that will flow so largely in less than half a century, I hope a small rill at least may be found to quench the thirst of the present generation, which seems to think itself in more danger of wanting money than of losing liberty.

It is difficult to judge with what intention such airy bursts of malevolence are vented; if such writers hope to deceive, let us rather repel them with scorn, than refute them by disputation

In this last terrifick paragraph are two positions, that, if our fears do not overpower our reflection, may enable us to support life a little longer We are told by these croakers of calamity, not only that our present ministers design to enslave us, but that the same malignity of purpose is to descend

through all their successors, and that the wealth to be poured into England by the Pactolus of America will, whenever it comes, be employed to purchase *the remains of liberty*.

Of those who now conduct the national affairs we may, without much arrogance, presume to know more than themselves, and of those who shall succeed them, whether minister or king, not to know less.

The other position is, that the crown, if this laudable opposition should not be successful, *will have the power of taxing America at pleasure*. Surely they think rather too meanly of our apprehensions, when they suppose us not to know what they well know themselves, that they are taxed, like all other British subjects, by parliament; and that the crown has not by the new imposts, whether right or wrong, obtained any additional power over their possessions.

It were a curious, but an idle, speculation to inquire, what effect these dictators of sedition expect from the dispersion of their Letter among us. If they believe their own complaints of hardship, and really dread the danger which they describe, they will naturally hope to communicate the same perceptions to their fellow-subjects. But probably in America, as in other places, the chiefs are incendiaries, that hope to rob in the tumults of a conflagration, and toss brands among a rabble passively combustible. Those who wrote the Address, though they have shown no great extent or profundity of mind, are yet probably wiser than to believe it but they have been taught by some master of mischief, how to put in motion the engine of political

electricity; to attract by the sounds of Liberty and Property, to repel by those of Popery and Slavery, and to give the great stroke by the name of Boston.

When subordinate communities oppose the decrees of the general legislature with defiance thus audacious, and malignity thus acrimonious, nothing remains but to conquer or to yield, to allow their claim of independence, or to reduce them by force to submission and allegiance.

It might be hoped that no Englishman could be found, whom the menaces of our own colonists, just rescued from the French, would not move to indignation, like that of the Scythians, who, returning from war, found themselves excluded from their own houses by their slaves

That corporations constituted by favour, and existing by sufferance, should dare to prohibit commerce with their native country, and threaten individuals by infamy, and societies with at least suspension of amity, for daring to be more obedient to government than themselves, is a degree of insolence, which not only deserves to be punished, but of which the punishment is loudly demanded by the order of life, and the peace of nations

Yet there have risen up, in the face of the publick, men who, by whatever corruptions or whatever infatuation, have undertaken to defend the Americans, endeavour to shelter them from resentment, and propose reconciliation without submission.

As political diseases are naturally contagious, let it be supposed for a moment that Cornwall, seized with the Philadelphian phrensy, may resolve to se-

parate itself from the general system of the English constitution, and judge of its own rights in its own parliament. A congress might then meet at Truro, and address the other counties in a style not unlike the language of the American patriots

“ Friends and fellow subjects,

“ We the delegates of the several towns and parishes of Cornwall, assembled to deliberate upon our own state and that of our constituents, having, after serious debate and calm consideration, settled the scheme of our future conduct, hold it necessary to declare the resolutions which we think ourselves entitled to form by the unalienable rights of reasonable beings, and into which we have been compelled by grievances and oppressions, long endured by us in patient silence, not because we did not feel, or could not remove them, but because we were unwilling to give disturbance to a settled government, and hoped that others would in time find like ourselves their true interest and their original powers, and all co-operate to universal happiness

“ But since having long indulged the pleasing expectation, we find general discontent not likely to increase, or not likely to end in general defection, we resolve to erect alone the standard of liberty

“ Know then, that you are no longer to consider Cornwall as an English county, visited by English judges, receiving law from an English parliament, or included in any general taxation of the kingdom; but as a state distinct and independent, governed by its own institutions, administered by its own ma-

gistrates, and exempt from any tax or tribute but such as we shall impose upon ourselves.

“We are the acknowledged descendants of the earliest inhabitants of Britain, of men, who before the time of history took possession of the island desolate and waste, and therefore open to the first occupants Of this descent, our language is a sufficient proof, which, not quite a century ago, was different from yours

“Such are the Cornishmen, but who are you? who but the unauthorised and lawless children of intruders, invaders, and oppressors? who but the transmitters of wrong, the inheritors of robbery? In claiming independence we claim but little. We might require you to depart from a land which you possess by usurpation, and to restore all that you have taken from us.

“Independence is the gift of Nature No man is born the master of another Every Cornishman is a freeman, for we have never resigned the rights of humanity; and he only can be thought free, who is not governed but by his own consent.

“You may urge that the present system of government has descended through many ages, and that we have a larger part in the representation of the kingdom than any other county

“All this is true, but it is neither cogent nor persuasive. We look to the original of things. Our union with the English counties was either compelled by force, or settled by compact

“That which was made by violence may by violence be broken. If we were treated as a conquered people, our rights might be obscured, but

could never be extinguished. The sword can give nothing but power, which a sharper sword can take away

“If our union was by compact, whom could the compact bind but those that concurred in the stipulations? We gave our ancestors no commission to settle the terms of future existence. They might be cowards that were frightened, or blockheads that were cheated, but whatever they were, they could contract only for themselves. What they could establish, we can annul

“Against our present form of government it shall stand in the place of all argument, that we do not like it. While we are governed as we do not like, where is our liberty? We do not like taxes, we will therefore not be taxed, we do not like your laws, and will not obey them

“The taxes laid by our representatives are laid, you tell us, by our own consent, but we will no longer consent to be represented. Our number of legislators was originally a burden, and ought to have been refused. It is now considered as a disproportionate advantage; who then will complain we resign it?

“We shall form a senate of our own, under a president whom the king shall nominate, but whose authority we will limit, by adjusting his salary to his merit. We will not withhold a proper share of contribution to the necessary expense of lawful government, but we will decide for ourselves what share is proper, what expense is necessary, and what government is lawful.

“Till our counsel is proclaimed independent and

unaccountable, we will, after the tenth day of September, keep our tin in our own hands you can be supplied from no other place, and must therefore comply, or be poisoned with the copper of your own kitchens.

“ If any Cornishman shall refuse his name to this just and laudable association, he shall be tumbled from St Michael’s Mount, or buried alive in a tinmine, and if any emissary shall be found seducing Cornishmen to their former state, he shall be smeared with tar, and rolled in feathers, and chased with dogs out of our dominions

“ From the Cornish Congress at Truro.”

Of this memorial what could be said but that it was written in jest, or written by a madman? Yet I know not whether the warmest admirers of Pennsylvanian eloquence can find any argument in the addresses of the Congress, that is not with greater strength urged by the Cornishman.

The argument of the irregular troops of controversy, stripped of its colours, and turned out naked to the view, is no more than this Liberty is the birthright of man, and where obedience is compelled, there is no liberty. The answer is equally simple Government is necessary to man, and where obedience is not compelled, there is no government

If the subject refuses to obey, it is the duty of authority to use compulsion Society cannot subsist but by the power, first of making laws, and then of enforcing them

To one of the threats hissed out by the Congress,

I have put nothing similar into the Cornish proclamation; because it is too wild for folly and too foolish for madness. If we do not withhold our king and his parliament from taxing them, they will cross the Atlantick and enslave us

How they will come they have not told us; perhaps they will take wing, and light upon our coasts. When the cranes thus begin to flutter, it is time for pigmies to keep their eyes about them. The great orator observes, that they will be very fit, after they have been taxed, to impose chains upon us. If they are so fit as then friend describes them, and so willing as they describe themselves, let us increase our army, and double our militia.

It has been of late a very general practice to talk of slavery among those who are setting at defiance every power that keeps the world in order. If the learned author of the *Reflections on Learning* has rightly observed, that no man ever could give law to language, it will be vain to prohibit the use of the word *slavery* but I could wish it more discreetly uttered; it is driven at one time too hard into our ears by the loud hurricane of Pennsylvanian eloquence, and at another glides too cold into our hearts by the soft conveyance of a female patriot bewailing the miseries of her *friends and fellow-citizens*

Such has been the progress of sedition, that those who a few years ago disputed only our right of laying taxes, now question the validity of every act of legislation. They consider themselves as emancipated from obedience, and as being no longer the subjects of the British crown. They leave us no

choice but of yielding or conquering, of resigning our dominion, or maintaining it by force

From force many endeavours have been used either to dissuade, or to deter us. Sometimes the merit of the Americans is exalted, and sometimes their sufferings are aggravated. We are told of their contributions to the last war, a war incited by their outcries, and continued for their protection, a war by which none but themselves were gainers. All that they can boast is, that they did something for themselves, and did not wholly stand inactive while the sons of Britain were fighting in their cause.

If we cannot admire, we are called to pity them; to pity those that show no regard to their mother-country; have obeyed no law which they could violate, have imparted no good which they could withhold; have entered into associations of fraud to rob their creditors; and into combinations to distress all who depended on their commerce. We are reproached with the cruelty of shutting one port, where every port is shut against us. We are censured as tyrannical for hindering those from fishing, who have condemned our merchants to bankruptcy and our manufacturers to hunger.

Others persuade us to give them more liberty, to take off restraints, and relax authority, and tell us what happy consequences will arise from forbearance. How their affections will be conciliated, and into what diffusions of beneficence their gratitude will luxuriate. They will love then friends. They will reverence their protectors. They will throw themselves into our arms, and lay their property at

our feet. They will buy from no other what we can sell them; they will sell to no other what we wish to buy.

That any obligations should overpower their attention to profit, we have known them long enough not to expect. It is not to be expected from a more liberal people. With what kindness they repay benefits, they are now showing us, who, as soon as we have delivered them from France, are defying and proscribing us.

But if we will permit them to tax themselves, they will give us more than we require. If we proclaim them independent, they will during pleasure pay us a subsidy. The contest is not now for money, but for power. The question is not how much we shall collect, but by what authority the collection shall be made.

Those who find that the Americans cannot be shown in any form that may raise love or pity, dress them in habiliments of terror, and try to make us think them formidable. The Bostonians can call into the field ninety thousand men. While we conquer all before us, new enemies will rise up behind, and our work will be always to begin. If we take possession of the towns, the colonists will retire into the inland regions, and the gain of victory will be only empty houses, and a wide extent of waste and desolation. If we subdue them for the present, they will universally revolt in the next war, and resign us without pity to subjection and destruction.

To all this it may be answered, that between losing America and resigning it there is no great difference; that it is not very reasonable to jump

into the sea, because the ship is leaky. All those evils may befall us, but we need not hasten them.

The Dean of Gloucester has proposed, and seems to propose it seriously, that we should at once release our claims, declare them masters of themselves, and whistle them down the wind. His opinion is, that our gain from them will be the same, and our expense less. What they can have most cheaply from Britain, they will still buy; what they can sell to us at the highest price, they will still sell.

It is, however, a little hard, that having so lately fought and conquered for their safety, we should govern them no longer. By letting them loose before the war, how many millions might have been saved. One wild proposal is best answered by another. Let us restore to the French what we have taken from them. We shall see our colonists at our feet, when they have an enemy so near them. Let us give the Indians arms, and teach them discipline, and encourage them now and then to plunder a plantation. Security and leisure are the parents of sedition.

While these different opinions are agitated, it seems to be determined by the legislature that force shall be tried. Men of the pen have seldom any great skill in conquering kingdoms, but they have strong inclination to give advice. I cannot forbear to wish, that this commotion may end without bloodshed, and that the rebels may be subdued by terror rather than by violence; and therefore recommend such a force as may take away, not only the power, but the hope of resist-

ance, and by conquering without a battle, save many from the sword.

If their obstinacy continues without actual hostilities, it may perhaps be mollified by turning out the soldiers to free quarters, forbidding any personal cruelty or hurt. It has been proposed that the slaves should be set free, an act which surely the lovers of liberty cannot but commend. If they are furnished with fire-arms for defence, and utensils for husbandry, and settled in some simple form of government within the country, they may be more grateful and honest than their masters.

Far be it from any Englishman to thirst for the blood of his fellow-subjects. Those who most deserve our resentment are unhappily at less distance. The Americans, when the Stamp Act was first proposed, undoubtedly disliked it, as every nation dislikes an impost, but they had no thought of resisting it, till they were encouraged and incited by European intelligence from men whom they thought their friends, but who were friends only to themselves.

On the original contrivers of mischief let an insulted nation pour out its vengeance. With whatever design they have inflamed this pernicious contest, they are themselves equally detestable if they wish success to the colonies, they are traitors to this country, if they wish their defeat, they are traitors at once to America and England. To them and them only must be imputed the interruption of commerce, and the miseries of war, the sorrow of those that shall be ruined, and the blood of those that shall fall.

Since the Americans have made it necessary to subdue them, may they be subdued with the least injury possible to their persons and their possessions! When they are reduced to obedience, may that obedience be secured by stricter laws and stronger obligations!

Nothing can be more noxious to society than that erroneous clemency, which, when a rebellion is suppressed, exacts no forfeiture and establishes no securities, but leaves the rebels in their former state. Who would not try the experiment which promises advantage without expense? If rebels once obtain a victory, their wishes are accomplished; if they are defeated, they suffer little, perhaps less than their conquerors; however often they play the game, the chance is always in their favour. In the mean time they are growing rich by victualling the troops that we have sent against them, and perhaps gain more by the residence of the army than they lose by the obstruction of their port.

Their charters being now, I suppose, legally forfeited, may be modelled as shall appear most commodious to the mother-country. Thus the privileges, which are found by experience liable to misuse, will be taken away, and those who now bellow as patriots, bluster as soldiers, and domineer as legislators, will sink into sober merchants and silent planters, peaceably diligent, and securely rich.

But there is one writer, and perhaps many who do not write, to whom the contraction of these pernicious privileges appears very dangerous, and who startle at the thoughts of *England free and America in chains*. Children fly from their own

shadow, and rhetoricians are frightened by their own voices *Chains* is undoubtedly a dreadful word, but perhaps the masters of civil wisdom may discover some gradations between chains and anarchy. Chains need not be put upon those who will be restrained without them. This contest may end in the softer phrase of English superiority and American obedience.

We are told, that the subjection of Americans may tend to the diminution of our own liberties an event, which none but very perspicacious politicians are able to foresee. If slavery be thus fatally contagious, how is it that we hear the loudest yelps for liberty among the drivers of negroes?

But let us interrupt a while this dream of conquest, settlement, and supremacy. Let us remember that being to contend, according to one orator, with three millions of Whigs, and according to another, with ninety thousand patriots of Massachusetts Bay, we may possibly be checked in our career of reduction. We may be reduced to peace upon equal terms, or driven from the western continent, and forbidden to violate a second time the happy borders of the land of liberty. The time is now perhaps at hand, which Sir Thomas Browne predicted between jest and earnest.

When America shall no more send out her treasure,
But spend it at home in American pleasure

If we are allowed upon our defeat to stipulate conditions, I hope the treaty of Boston will permit us to import into the confederated cantons such products as they do not raise, and such manu-

factures as they do not make, and cannot buy cheaper from other nations, paying like others the appointed customs; that if an English ship salutes a fort with four guns, it shall be answered at least with two, and that if an Englishman be inclined to hold a plantation, he shall only take an oath of allegiance to the reigning powers, and be suffered, while he lives inoffensively, to retain his own opinion of English rights, unmolested in his conscience by an oath of abjuration.

A
JOURNEY
TO THE
WESTERN ISLANDS
OF
SCOTLAND

JOURNEY, &c.

I HAD desired to visit the Hebrides, or Western Islands of Scotland, so long, that I scarcely remember how the wish was originally excited; and was in the autumn of the year 1773 induced to undertake the journey, by finding in Mr. Boswell a companion, whose acuteness would help my inquiry, and whose gaiety of conversation and civility of manners are sufficient to counteract the inconveniencies of travel, in countries less hospitable than we have passed.

On the eighteenth of August we left Edinburgh, a city too well known to admit description, and directed our course northward, along the eastern coast of Scotland, accompanied the first day by another gentleman, who could stay with us only long enough to show us how much we lost at separation.

As we crossed the Frith of Forth, our curiosity was attracted by Inch Keith, a small island, which neither of my companions had ever visited, though, lying within their view, it had all their lives solicited their notice. Here, by climbing with some difficulty over shattered crags, we made the first experiment of unfrequented coasts. Inch Keith is nothing more than a rock covered with a thin layer of earth, not wholly bare of grass, and very fertile

of thistles. A small herd of cows grazes annually upon it in the summer. It seems never to have afforded to man or beast a permanent habitation.

We found only the ruins of a small fort, not so injured by time but that it might be easily restored to its former state. It seems never to have been intended as a place of strength, nor was built to endure a siege, but merely to afford cover to a few soldiers, who perhaps had the charge of a battery, or were stationed to give signals of approaching danger. There is therefore no provision of water within the walls, though the spring is so near, that it might have been easily enclosed. One of the stones had this inscription. "*Maria Reg 1564.*" It has probably been neglected from the time that the whole island had the same king.

We left this little island with our thoughts employed a while on the different appearance that it would have made, if it had been placed at the same distance from London, with the same facility of approach, with what emulation of price a few rocky acres would have been purchased, and with what expensive industry they would have been cultivated and adorned.

When we landed, we found our chaise ready, and passed through Kinghoin, Kirkaldy, and Cowpar, places not unlike the small or straggling market-towns in those parts of England where commerce and manufactures have not yet produced opulence.

Though we were yet in the most populous part of Scotland, and at so small a distance from the capital, we met few passengers

The roads are neither rough nor dirty, and it

affords a southern stranger a new kind of pleasure to travel so commodiously without the interruption of toll-gates. Where the bottom is rocky, as it seems commonly to be in Scotland, a smooth way is made indeed with great labour, but it never wants repairs; and in those parts where adventitious materials are necessary, the ground once consolidated is rarely broken; for the inland commerce is not great, nor are heavy commodities often transported otherwise than by water. The carriages in common use are small carts, drawn each by one little horse; and a man seems to derive some degree of dignity and importance from the reputation of possessing a two-horse cart.

ST ANDREWS

At an hour somewhat late we came to St. Andrews, a city once archiepiscopal; where that university still subsists in which philosophy was formerly taught by Buchanan, whose name has as fair a claim to immortality as can be conferred by modern latinity, and perhaps a fairer than the instability of vernacular languages admits.

We found, that by the interposition of some invisible friend, lodgings had been provided for us at the house of one of the professors, whose easy civility quickly made us forget that we were strangers; and in the whole time of our stay we were gratified by every mode of kindness, and entertained with all the elegance of lettered hospitality.

In the morning we rose to perambulate a city, which only history shows to have once flourished,

and surveyed the ruins of ancient magnificence, of which even the ruins cannot long be visible, unless some care be taken to preserve them; and where is the pleasure of preserving such mournful memorials? They have been till very lately so much neglected, that every man carried away the stones who fancied that he wanted them.

The cathedral, of which the foundations may be still traced, and a small part of the wall is standing, appears to have been a spacious and majestick building, not unsuitable to the primacy of the kingdom. Of the architecture, the poor remains can hardly exhibit, even to an artist, a sufficient specimen. It was demolished, as is well known, in the tumult and violence of Knox's reformation.

Not far from the cathedral, on the margin of the water, stands a fragment of the castle, in which the archbishop anciently resided. It was never very large, and was built with more attention to security than pleasure. Cardinal Beaton is said to have had workmen employed in improving its fortifications, at the time when he was murdered by the ruffians of reformation, in the manner of which Knox has given what he himself calls a merry narrative.

The change of religion in Scotland, eager and vehement as it was, raised an epidemical enthusiasm, compounded of sullen scrupulousness and warlike ferocity, which, in a people whom idleness resigned to their own thoughts, and who, conversing only with each other, suffered no dilution of their zeal from the gradual influx of new opinions, was long transmitted in its full strength from the old to the young, but by

trade and intercourse with England is now visibly abating, and giving way too fast to that laxity of practice, and indifference of opinion, in which men, not sufficiently instructed to find the middle point, too easily shelter themselves from rigour and constraint.

The city of St Andrews, when it had lost its archiepiscopal pre-eminence, gradually decayed one of its streets is now lost; and in those that remain, there is the silence and solitude of inactive indigence and gloomy depopulation

The university, within a few years, consisted of three colleges, but is now reduced to two, the college of St. Leonard being lately dissolved by the sale of its buildings, and the appropriation of its revenues to the professors of the two others. The chapel of the alienated college is yet standing, a fabrick not inelegant of external structure. but I was always, by some civil excuse, hindered from entering it. A decent attempt, as I was since told, has been made to convert it into a kind of greenhouse, by planting its area with shrubs. This new method of gardening is unsuccessful, the plants do not hitherto prosper. To what use it will next be put, I have no pleasure in conjecturing. It is something, that its present state is at least not ostentatiously displayed. Where there is yet shame, there may in time be virtue

The dissolution of St Leonard's College was doubtless necessary, but of that necessity there is reason to complain. It is surely not without just reproach, that a nation, of which the commerce is hourly extending, and the wealth increasing, denies any participation of its prosperity to its literary

societies, and while its merchants or its nobles are raising palaces, suffers its universities to moulder into dust.

Of the two colleges yet standing, one is by the institution of its founder appropriated to divinity. It is said to be capable of containing fifty students; but more than one must occupy a chamber. The library, which is of late erection, is not very spacious, but elegant and luminous

The doctor, by whom it was shown, hoped to irritate or subdue my English vanity, by telling me, that we had no such repository of books in England.

St. Andrews seems to be a place eminently adapted to study and education, being situated in a populous, yet a cheap country, and exposing the minds and manners of young men neither to the levity and dissoluteness of a capital city, nor to the gross luxury of a town of commerce, places naturally unpropitious to learning, in one the desire of knowledge easily gives way to the love of pleasure, and in the other is in danger of yielding to the love of money.

The students, however, are represented as at this time not exceeding a hundred. Perhaps it may be some obstruction to their increase that there is no episcopal chapel in the place. I saw no reason for imputing their paucity to the present professors; nor can the expense of an academical education be very reasonably objected. A student of the highest class may keep his annual session, or as the English call it, his term, which lasts seven months, for about fifteen pounds, and one of lower rank for less than ten, in which board, lodging, and instruction are all included

The chief magistrate resident in the university, answering to our vice-chancellor, and to the rector magnificus on the continent, had commonly the title of lord rector, but being addressed only as Mr. Rector in an inaugural speech by the present chancellor, he has fallen from his former dignity of style. Lordship was very liberally annexed by our ancestors to any station or character of dignity. they said, the lord general, and lord ambassador; so we still say, my lord, to the judge upon the circuit, and yet retain in our liturgy, the lords of the council.

In walking among the ruins of religious buildings, we came to two vaults over which had formerly stood the house of the sub-prior. One of the vaults was inhabited by an old woman, who claimed the right of abode there, as the widow of a man whose ancestors had possessed the same gloomy mansion for no less than four generations. The right, however it began, was considered as established by legal prescription, and the old woman lives undisturbed. She thinks, however, that she has a claim to something more than sufferance; for as her husband's name was Bruce, she is allied to royalty, and told Mr. Boswell, that when there were persons of quality in the place, she was distinguished by some notice, that indeed she is now neglected, but she spins a thread, has the company of a cat, and is troublesome to nobody.

Having now seen whatever this ancient city offered to our curiosity, we left it with good wishes, having reason to be highly pleased with the attention that was paid us. But whoever surveys the

world must see many things that give him pain. The kindness of the professors did not contribute to abate the uneasy remembrance of an university declining, a college alienated, and a church profaned and hastening to the ground.

St. Andrews indeed has formerly suffered more atrocious ravages and more extensive destruction, but recent evils affect with greater force. We were reconciled to the sight of archiepiscopal ruins. The distance of a calamity from the present time seems to preclude the mind from contact or sympathy. Events long past are barely known, they are not considered. We read with as little emotion the violence of Knox and his followers, as the irruptions of Alaric and the Goths. Had the university been destroyed two centuries ago, we should not have regretted it; but to see it pining in decay, and struggling for life, fills the mind with mournful images and ineffectual wishes.

ABERBROTHICK

As we knew sorrow and wishes to be vain, it was now our business to mind our way. The roads of Scotland afford little diversion to the traveller, who seldom sees himself either encountered or overtaken, and who has nothing to contemplate but grounds that have no visible boundaries, or are separated by walls of loose stone. From the bank of the Tweed to St Andrews I had never seen a single tree, which I did not believe to have grown up far within the present century. Now and then about a gentleman's house stands a small plantation, which in Scotch is called a policy, but of these there are few, and those

few all very young The variety of sun and shade is here utterly unknown There is no tree for either shelter or timber The oak and the thorn is equally a stranger, and the whole country is extended in uniform nakedness, except that in the road between Kirkaldy and Cowpar, I passed for a few yards between two hedges A tree might be a show in Scotland as a horse in Venice At St Andrews Mr. Boswell found only one, and recommended it to my notice; I told him that it was rough and low, or looked as if I thought so. This, said he, is nothing to another a few miles off I was still less delighted to hear that another tree was not to be seen nearer. Nay, said a gentleman that stood by, I know but of this and that tree in the county.

The Lowlands of Scotland had once undoubtedly an equal portion of woods with other countries. Forests are every where gradually diminished, as architecture and cultivation prevail by the increase of people and the introduction of arts But I believe few regions have been denuded like this, where many centuries must have passed in waste without the least thought of future supply Davies observes in his account of Ireland, that no Irishman had ever planted an orchard For that negligence some excuse might be drawn from an unsettled state of life, and the instability of property, but in Scotland possession has long been secure, and inheritance regular, yet it may be doubted whether before the Union any man between Edinburgh and England had ever set a tree.

Of this improvidence no other account can be given than that it probably began in times of tumult, and continued because it had begun. Established custom is not easily broken, till some great event shakes the whole system of things, and life seems to recommence upon new principles. That before the Union the Scots had little trade and little money, is no valid apology; for plantation is the least expensive of all methods of improvement. To drop a seed into the ground can cost nothing, and the trouble is not great of protecting the young plant, till it is out of danger, though it must be allowed to have some difficulty in places like these, where they have neither wood for palisades, nor thorns for hedges.

Our way was over the Firth of Tay, where, though the water was not wide, we paid four shillings for ferrying the chaise. In Scotland the necessities of life are easily procured, but superfluities and elegancies are of the same price at least as in England, and therefore may be considered as much dearer.

We stopped a while at Dundee, where I remember nothing remarkable, and mounting our chaise again, came about the close of the day to Aberbrothick.

The monastery of Aberbrothick is of great renown in the history of Scotland. Its ruins afford ample testimony of its ancient magnificence. Its extent might, I suppose, easily be found by following the walls among the grass and weeds, and its height is known by some parts yet standing. The arch of

one of the gates is entire, and of another only so far dilapidated as to diversify the appearance. A square apartment of great loftiness is yet standing; its use I could not conjecture, as its elevation was very disproportionate to its area. Two corner towers particularly attracted our attention. Mr Boswell, whose inquisitiveness is seconded by great activity, scrambled in at a high window, but found the stairs within broken, and could not reach the top. Of the other tower we were told that the inhabitants sometimes climbed it, but we did not immediately discern the entrance, and as the night was gathering upon us, thought proper to desist. Men skilled in architecture might do what we did not attempt. they might probably form an exact ground plot of this venerable edifice. They may from some parts yet standing conjecture its general form, and perhaps by comparing it with other buildings of the same kind and the same age, attain an idea very near to truth. I should scarcely have regretted my journey, had it afforded nothing more than the sight of Aberbrothock.

MONTROSE

Leaving these fragments of magnificence, we travelled on to Montrose, which we surveyed in the morning, and found it well built, airy, and clean. The town-house is a handsome fabrick with a portico. We then went to view the English chapel, and found a small church, clean to a degree unknown in any other part of Scotland, with commodious galleries, and what was yet less expected, with an organ.

At our inn we did not find a reception such as we thought proportionate to the commercial opulence of the place ; but Mr. Boswell desired me to observe that the innkeeper was an Englishman, and I then defended him as well as I could

When I had proceeded thus far, I had opportunities of observing what I had never heard, that there were many beggars in Scotland In Edinburgh the proportion is, I think, not less than in London, and in the smaller places it is far greater than in English towns of the same extent It must, however, be allowed, that they are not importunate, nor clamorous They solicit silently, or very modestly, and therefore, though their behaviour may strike with more force the heart of a stranger, they are certainly in danger of missing the attention of their countrymen. Novelty has always some power, an unaccustomed mode of begging excites an unaccustomed degree of pity But the force of novelty is by its own nature soon at an end, the efficacy of outcry and perseverance is permanent and certain

The road from Montrose exhibited a continuation of the same appearances The country is still naked, the hedges are of stone, and the fields so generally ploughed, that it is hard to imagine where grass is found for the horses that till them The harvest, which was almost ripe, appeared very plentiful

Early in the afternoon Mr Boswell observed that we were at no great distance from the house of Lord Monboddo The magnetism of his conversation easily drew us out of our way, and the entertainment which we received would have been a sufficient recompense for a much greater deviation

The roads beyond Edinburgh, as they are less frequented, must be expected to grow gradually rougher, but they were hitherto by no means incommodious. We travelled on with the gentle pace of a Scotch driver, who having no rivals in expedition, neither gives himself nor his horses unnecessary trouble. We did not affect the impatience we did not feel, but were satisfied with the company of each other as well riding in the chaise, as sitting at an inn. The night and the day are equally solitary and equally safe; for where there are so few travellers, why should there be robbers?

ABERDEEN

We came somewhat late to Aberdeen, and found the inn so full, that we had some difficulty in obtaining admission, till Mr Boswell made himself known. his name overpowered all objection, and we found a very good house and civil treatment.

I received the next day a very kind letter from Sir Alexander Gordon, whom I had formerly known in London, and, after a cessation of all intercourse for near twenty years, met here professor of physick in the King's College. Such unexpected renewals of acquaintance may be numbered among the most pleasing incidents of life.

The knowledge of one professor soon procured me the notice of the rest, and I did not want any token of regard, being conducted wherever there was anything which I desired to see, and entertained

at once with the novelty of the place, and the kindness of communication.

To write of the cities of our own island with the solemnity of geographical description, as if we had been cast upon a newly discovered coast, has the appearance of a very frivolous ostentation, yet as Scotland is little known to the greater part of those who may read these observations, it is not superfluous to relate, that under the name of Aberdeen are comprised two towns, standing about a mile distant from each other, but governed, I think, by the same magistrates

Old Aberdeen is the ancient episcopal city, in which are still to be seen the remains of the cathedral. It has the appearance of a town in decay, having been situated, in times when commerce was yet unstudied, with very little attention to the commodities of the harbour

New Aberdeen has all the bustle of prosperous trade, and all the show of increasing opulence. It is built by the water-side. The houses are large and lofty, and the streets spacious and clean. They build almost wholly with the granite used in the new pavement of the streets of London, which is well known not to want hardness, yet they shape it easily. It is beautiful, and must be very lasting

What particular parts of commerce are chiefly exercised by the merchants of Aberdeen, I have not inquired. The manufacture which forces itself upon a stranger's eye is that of knit-stockings, on which the women of the lower class are visibly employed.

In each of these towns there is a college, or in stricter language, an university; for in both there are professors of the same parts of learning, and the colleges hold their sessions and confer degrees separately, with total independence of one on the other.

In Old Aberdeen stands the King's College, of which the first president was Hector Boece, or Boethius, who may be justly revered as one of the revivers of elegant learning. When he studied at Paris, he was acquainted with Erasmus, who afterwards gave him a publick testimony of his esteem, by inscribing to him a catalogue of his works. The style of Boethius, though, perhaps, not always rigorously pure, is formed with great diligence upon ancient models, and wholly uninfected with monastick barbarity. His history is written with elegance and vigour, but his fabulousness and credulity are justly blamed. His fabulousness, if he was the author of the fictions, is a fault for which no apology can be made, but his credulity may be excused in an age when all men were credulous. Learning was then rising on the world, but as so long accustomed to darkness were too much dazzled with its light to see any thing distinctly. The first race of scholars in the fifteenth century, and some time after, were, for the most part, learning to speak, rather than to think, and were therefore more studious of elegance than of truth. The contemporaries of Boethius thought it sufficient to know what the ancients had delivered. The examination of tenets and of facts was reserved for another generation.

Boethius, as president of the university enjoyed a revenue of forty Scottish marks, about two pounds four shillings and sixpence of sterling money. In the present age of trade and taxes, it is difficult even for the imagination so to raise the value of money, or so to diminish the demands of life, as to suppose four and forty shillings a year an honourable stipend, yet it was probably equal, not only to the needs, but to the rank of Boethius. The wealth of England was undoubtedly to that of Scotland more than five to one, and it is known that Henry the Eighth, among whose faults avarice was never reckoned, granted to Roger Ascham, as a reward of his learning, a pension of ten pounds a year.

The other, called the Marischal College, is in the new town. The hall is large and well lighted. One of its ornaments is the picture of Arthur Johnston, who was principal of the college, and who holds among the Latin poets of Scotland the next place to the elegant Buchanan.

In the library I was shown some curiosities, a Hebrew manuscript of exquisite penmanship, and a Latin translation of Aristotle's *Politicks* by Leonardus Aretinus, written in the Roman character with nicety and beauty, which, as the art of printing has made them no longer necessary, are not now to be found. This was one of the latest performances of the transcribers, for Aretinus died but about twenty years before typography was invented. This version has been printed, and may be found in libraries, but is little read, for the same books have been since translated both by Victorius and Lambinus,

who lived in an age more cultivated, but perhaps owed in part to Aretinus that they were able to excel him. Much is due to those who first broke the way to knowledge, and left only to their successors the task of smoothing it.

In both these colleges the methods of instruction are nearly the same, the lectures differing only by the accidental difference of diligence, or ability in the professors. The students wear scarlet gowns, and the professors black, which is, I believe, the academical dress in all the Scottish universities, except that of Edinburgh, where the scholars are not distinguished by any particular habit. In the King's College there is kept a publick table, but the scholars of the Marischal College are boarded in the town. The expense of living is here, according to the information that I could obtain, somewhat more than at St. Andrews.

The course of education is extended to four years, at the end of which those who take a degree, who are not many, become masters of arts; and whoever is a master may, if he pleases, immediately commence doctor. The title of doctor, however, was for a considerable time bestowed only on physicians. The advocates are examined and approved by their own body; the ministers were not ambitious of titles, or were afraid of being censured for ambition, and the doctorate in every faculty was commonly given or sold into other countries. The ministers are now reconciled to distinction, and as it must always happen that some will excel others, have thought graduation a proper testimony of uncommon abilities or acquisitions.

The indiscriminate collation of degrees has justly taken away that respect which they originally claimed as stamps, by which the literary value of men so distinguished was authoritatively denoted. That academical honours, or any others, should be conferred with exact proportion to merit, is more than human judgment or human integrity have given reason to expect. Perhaps degrees in universities cannot be better adjusted by any general rule than by the length of time passed in the publick profession of learning. An English or Irish doctorate cannot be obtained by a very young man, and it is reasonable to suppose, what is likewise by experience commonly found true, that he who is by age qualified to be a doctor has in so much time gained learning sufficient not to disgrace the title, or wit sufficient not to desire it.

The Scotch universities hold but one term or session in the year. That of St. Andrew's continues eight months, that of Aberdeen only five, from the first of November to the first of April.

In Aberdeen there is an English chapel, in which the congregation was numerous and splendid. The form of publick worship used by the church of England is in Scotland legally practised in licensed chapels served by clergymen of English or Irish ordination, and by tacit connivance quietly permitted in separate congregations, supplied with ministers by the successors of the bishops who were deprived at the Revolution.

We came to Aberdeen on Saturday, August 21. On Monday we were invited into the town-hall, where I had the freedom of the city given me by the

lord provost. The honour conferred had all the decorations that politeness could add, and what I am afraid I should not have had to say of any city south of the Tweed, I found no petty officer bowing for a fee.

The parchment containing the record of admission is, with the seal appending, fastened to a riband, and worn for one day by the new citizen in his hat

By a lady who saw us at the chapel, the earl of Errol was informed of our arrival, and we had the honour of an invitation to his seat, called Slanes Castle, as I am told, improperly, from the castle of that name, which once stood at a place not far distant.

The road beyond Aberdeen grew more stony, and continued equally naked of all vegetable decoration. We travelled over a tract of ground near the sea, which, not long ago, suffered a very uncommon and unexpected calamity. The sand of the shore was raised by a tempest in such quantities, and carried to such a distance, that an estate was overwhelmed and lost. Such and so hopeless was the barrenness superinduced, that the owner, when he was required to pay the usual tax, desired rather to resign the ground

SLANES CASTLE THE BULLER OF BUCHAN

We came in the afternoon to Slanes Castle, built upon the margin of the sea, so that the walls of one of the towers seem only a continuation of a perpendicular rock, the foot of which is beaten by the waves. To walk round the house seemed imprac-

ticable From the windows the eye wanders over the sea that separates Scotland from Norway, and when the winds beat with violence, must enjoy all the terrific grandeur of the tempestuous ocean. I would not for my amusement wish for a storm, but as storms, whether wished or not, will sometimes happen, I may say, without violation of humanity, that I should willingly look out upon them from Slanes Castle

When we were about to take our leave, our departure was prohibited by the countess till we should have seen two places upon the coast, which she rightly considered as worthy of curiosity, Dun Buy and the Bulet of Buchan, to which Mr Boyd very kindly conducted us

Dun Buy, which in Erse is said to signify the Yellow Rock, is a double protuberance of stone, open to the main sea on one side, and parted from the land by a very narrow channel on the other. It has its name and its colour from the dung of innumerable sea-fowls, which in the spring choose this place as convenient for incubation, and have their eggs and their young taken in great abundance. One of the birds that frequent this rock has, as we were told, its body not larger than a duck's, and yet lays eggs as large as those of a goose. This bird is by the inhabitants named a coot. That which is called coot in England is here a cooter

Upon these rocks there was nothing that could long detain attention, and we soon turned our eyes to the Bulet, or Bouillon of Buchan, which no man can see with indifference, who has either sense of danger, or delight in rarity. It is a rock perpen-

dicularly tubulated, united on one side with a high shore, and on the other rising steep to a great height, above the main sea. The top is open, from which may be seen a dark gulf of water which flows into the cavity, through a breach made in the lower part of the inclosing rock. It has the appearance of a vast well bordered with a wall. The edge of the Buller is not wide, and to those that walk round appears very narrow. He that ventures to look downward sees, that if his foot should slip, he must fall from his dreadful elevation upon stones on one side, or into the water on the other. We however went round, and were glad when the circuit was completed.

When we came down to the sea, we saw some boats and rowers, and resolved to explore the Buller, at the bottom. We entered the arch, which the water had made, and found ourselves in a place, which, though we could not think ourselves in danger, we could scarcely survey without some recoil of the mind. The basin in which we floated was nearly circular, perhaps thirty yards in diameter. We were inclosed by a natural wall, rising steep on every side to a height which produced the idea of insurmountable confinement. The interception of all lateral light caused a dismal gloom. Round us was a perpendicular rock, above us the distant sky, and below an unknown profundity of water. If I had any malice against a walking spirit, instead of laying him in the Red Sea, I would condemn him to reside in the Buller of Buchan.

But terror without danger is only one of the sports of fancy, a voluntary agitation of the mind that is

permitted no longer than it pleases We were soon at leisure to examine the place with minute inspection, and found many cavities which, as the watermen told us, went backward to a depth which they had never explored. Their extent we had not time to try, they are said to serve different purposes. Ladies come hither sometimes in the summer with collations, and smugglers make them storehouses for clandestine merchandise. It is hardly to be doubted but the pirates of ancient times often used them as magazines of arms, or repositories of plunder.

To the little vessels used by the northern rowers, the Buller may have served as a shelter from storms, and perhaps as a retreat from enemies, the entrance might have been stopped, or guarded with little difficulty, and though the vessels that were stationed within would have been battered with stones showered on them from above, yet the crews would have lain safe in the caverns

Next morning we continued our journey, pleased with our reception at Slanes Castle, of which we had now leisure to recount the grandeur and the elegance; for our way afforded us few topicks of conversation The ground was neither uncultivated nor unfruitful; but it was still all arable Of flocks or herds there was no appearance. I had now travelled two hundred miles in Scotland, and seen only one tree not younger than myself

BAMFF

We dined this day at the house of Mr. Frazer of Streighton, who showed us in his grounds some

stones yet standing of a druidical circle, and what I began to think more worthy of notice, some forest trees of full growth.

At night we came to Bamff, where I remember nothing that particularly claimed my attention. The ancient towns of Scotland have generally an appearance unusual to Englishmen. The houses, whether great or small, are for the most part built of stones. Their ends are now and then next the streets, and the entrance into them is very often by a flight of steps, which reaches up to the second story; the floor which is level with the ground being entered only by stairs descending within the house.

The art of joining squares of glass with lead is little used in Scotland, and in some places is totally forgotten. The frames of their windows are all of wood. They are more frugal of their glass than the English, and will often, in houses not otherwise mean, compose a square of two pieces, not joining like cracked glass, but with one edge laid perhaps half an inch over the other. Their windows do not move upon hinges, but are pushed up and drawn down in grooves, yet they are seldom accommodated with weights and pulleys. He that would have his window open must hold it with his hand, unless what may be sometimes found among good contrivers, there be a nail which he may stick into a hole, to keep it from falling.

What cannot be done without some uncommon trouble or particular expedient will not often be done at all. The incommodiousness of the Scotch windows keeps them very closely shut. The necessity of ventilating human habitations has not

yet been found by our northern neighbours, and even in houses well built and elegantly furnished, a stranger may be sometimes forgiven, if he allows himself to wish for fiesher air.

These diminutive observations seem to take away something from the dignity of writing, and therefore are never communicated but with hesitation, and a little fear of abasement and contempt. But it must be remembered, that life consists not of a series of illustrious actions, or elegant enjoyments, the greater part of our time passes in compliance with necessities, in the performance of daily duties, in the removal of small inconveniencies, in the procurement of petty pleasures, and we are well or ill at ease, as the main stream of life glides on smoothly, or is ruffled by small obstacles and frequent interruption. The true state of every nation is the state of common life. The manners of a people are not to be found in the schools of learning, or the palaces of greatness, where the national character is obscured or obliterated by travel or instruction, by philosophy or vanity, nor is publick happiness to be estimated by the assemblies of the gay, or the banquets of the rich. The great mass of nations is neither rich nor gay. they whose aggregate constitutes the people are found in the streets and the villages, in the shops and farms, and from them collectively considered must the measure of general prosperity be taken. As they approach to delicacy, a nation is refined; as their conveniencies are multiplied, a nation, at least a commercial nation, must be denominated wealthy.

ELGIN

Finding nothing to detain us at Bamff, we set out in the morning, and having breakfasted at Cullen, about noon came to Elgin, where, in the inn that we supposed the best, a dinner was set before us, which we could not eat. This was the first time, and except one, the last, that I found any reason to complain of a Scottish table; and such disappointments, I suppose, must be expected in every country, where there is no great frequency of travellers.

The ruins of the cathedral of Elgin afforded us another proof of the waste of reformation. There is enough yet remaining to show that it was once magnificent. Its whole plot is easily traced. On the north side of the choir, the chapter-house, which is roofed with an arch of stone, remains entire, and on the south side, another mass of building, which we could not enter, is preserved by the care of the family of Gordon, but the body of the church is a mass of fragments.

A paper was here put into our hands, which deduced from sufficient authorities the history of this venerable ruin. The church of Elgin had, in the intestine tumults of the barbarous ages, been laid waste by the irruption of a highland chief, whom the bishop had offended, but it was gradually restored to the state of which the traces may be now discerned, and was at last not destroyed by the tumultuous violence of Knox, but more shamefully suffered to dilapidate by deliberate robbery and frigid indifference. There is still extant, in the

books of the council, an order, of which I cannot remember the date, but which was doubtless issued after the reformation, directing that the lead, which covers the two cathedrals of Elgin and Aberdeen, shall be taken away, and converted into money for the support of the army. A Scotch army was in those times very cheaply kept; yet the lead of two churches must have borne so small a proportion to any military expense, that it is hard not to believe the reason alleged to be merely popular, and the money intended for some private purse. The order, however, was obeyed, the two churches were stripped, and the lead was shipped to be sold in Holland. I hope every reader will rejoice that this cargo of sacrilege was lost at sea.

Let us not, however, make too much haste to despise our neighbours. Our own cathedrals are mouldering by unregarded dilapidation. It seems to be part of the despicable philosophy of the time to despise monuments of sacred magnificence, and we are in danger of doing that deliberately, which the Scots did not do but in the unsettled state of an imperfect constitution.

Those who had once uncovered the cathedrals never wished to cover them again; and being thus made useless, they were first neglected, and perhaps as the stone was wanted, afterwards demolished.

Elgin seems a place of little trade, and thinly inhabited. The episcopal cities of Scotland, I believe, generally fell with their churches, though some of them have since recovered by a situation convenient for commerce. Thus Glasgow, though

it has no longer an archbishop, has risen beyond its original state by the opulence of its traders; and Aberdeen, though its ancient stock had decayed, flourishes by a new shoot in another place.

In the chief street of Elgin, the houses jut over the lowest story, like the old buildings of timber in London, but with greater prominence, so that there is sometimes a walk for a considerable length under a cloister, or portico, which is now indeed frequently broken, because the new houses have another form, but seems to have been uniformly continued in the old city.

FORES CALDER FORT GEORGE.

We went forwards the same day to Fores, the town to which Macbeth was travelling, when he met the weird sisters in his way. This to an Englishman is classic ground. Our imaginations were heated, and our thoughts recalled to their old amusements.

We had now a prelude to the Highlands. We began to leave fertility and culture behind us, and saw for a great length of road nothing but heath; yet at Fochabars, a seat belonging to the duke of Gordon, there is an orchard, which in Scotland I had never seen before, with some timber trees, and a plantation of oaks.

At Fores we found good accommodation, but nothing worthy of particular remark, and next morning entered upon the road on which Macbeth heard the fatal prediction; but we travelled on not interrupted by promises of kingdoms, and came to Nairn, a royal burgh, which, if once it flourished, is now in a state of miserable decay, but I know not

whether its chief annual magistrate has not still the title of Lord Provost.

At Nann we may fix the verge of the Highlands; for here I first saw peat fires, and first heard the Erse language. We had no motive to stay longer than to breakfast, and went forward to the house of Mr Macaulay, the minister who published an account of St Kilda, and by his direction visited Calder Castle, from which Macbeth drew his second title. It has been formerly a place of strength. The draw-bridge is still to be seen, but the moat is now dry. The tower is very ancient. Its walls are of great thickness, arched on the top with stone, and surrounded with battlements. The rest of the house is later, though far from modern.

We were favoured by a gentleman, who lives in the castle, with a letter to one of the officers at Fort George, which being the most regular fortification in the island well deserves the notice of a traveller, who has never travelled before. We went thither next day, found a very kind reception, were led round the works by a gentleman, who explained the use of every part, and entertained by Sir Eyre Coote, the governor, with such elegance of conversation, as left us no attention to the delicacies of his table.

Of Fort George I shall not attempt to give any account. I cannot delineate it scientifically, and a loose and popular description is of use only when the imagination is to be amused. There was every where an appearance of the utmost neatness and regularity. But my suffrage is of little value, because this and Fort Augustus are the only garrisons that I ever saw.

We did not regret the time spent at the fort, though in consequence of our delay we came somewhat late to Inverness, the town which may properly be called the capital of the Highlands. Hither the inhabitants of the inland parts come to be supplied with what they cannot make for themselves. Hither the young nymphs of the mountains and valleys are sent for education, and as far as my observation has reached, are not sent in vain.

INVERNESS

Inverness was the last place which had a regular communication by high roads with the southern counties. All the ways beyond it have, I believe, been made by the soldiers in this century. At Inverness therefore Cromwell, when he subdued Scotland, stationed a garrison, as at the boundary of the Highlands. The soldiers seem to have incorporated afterwards with the inhabitants, and to have peopled the place with an English race, for the language of this town has been long considered as peculiarly elegant.

Here is a castle, called the castle of Macbeth, the walls of which are yet standing. It was no very capacious edifice, but stands upon a rock so high and steep, that I think it was once not accessible, but by the help of ladders, or a bridge. Over against it, on another hill, was a fort built by Cromwell, now totally demolished; for no faction of Scotland loved the name of Cromwell, or had any desire to continue his memory.

Yet what the Romans did to other nations was

of their lands was unskilful, and then domestick life unformed; their tables were coarse as the feasts of Eskimeaux, and their houses filthy as the cottages of Hottentots

Since they have known that their condition was capable of improvement, their progress in useful knowledge has been rapid and uniform. What remains to be done they will quickly do, and then wonder, like me, why that which was so necessary and so easy was so long delayed. But they must be for ever content to owe to the English that elegance and culture, which, if they had been vigilant and active, perhaps the English might have owed to them.

Here the appearance of life began to alter. I had seen a few women with plaids at Aberdeen; but at Inverness the Highland manners are common. There is I think a kirk, in which only the Erse language is used. There is likewise an English chapel, but meanly built, where on Sunday we saw a very decent congregation

We were now to bid farewell to the luxury of travelling, and to enter a country upon which perhaps no wheel has ever rolled. We could indeed have used our post-chaise one day longer, along the military road to Fort Augustus, but we could have hired no horses beyond Inverness, and we were not so sparing of ourselves, as to lead them, merely that we might have one day longer the indulgence of a carriage.

At Inverness therefore we procured three horses for ourselves and a servant, and one more for our baggage, which was no very heavy load. We found

in the course of our journey the convenience of having disencumbered ourselves, by laying aside whatever we could spare, for it is not to be imagined without experience, how in climbing crags, and treading bogs, and winding through narrow and obstructed passages, a little bulk will hinder, and a little weight will burden; or how often a man that has pleased himself at home with his own resolution, will, in the hour of darkness and fatigue, be content to leave behind him every thing but himself.

LOUGH NESS

We took two Highlanders to run beside us, partly to show us the way, and partly to take back from the sea-side the horses, of which they were the owners. One of them was a man of great liveliness and activity, of whom his companion said, that he would tire any horse in Inverness. Both of them were civil and ready-handed. Civility seems part of the national character of Highlanders. Every chieftain is a monarch, and politeness, the natural product of royal government, is diffused from the laird through the whole clan. But they are not commonly dexterous. their narrowness of life confines them to a few operations, and they are accustomed to endure little wants more than to remove them.

We mounted our steeds on the twenty-eighth of August, and directed our guides to conduct us to Fort Augustus. It is built at the head of Lough Ness, of which Inverness stands at the outlet. The way between them has been cut by the soldiers, and the

greater part of it runs along a rock, levelled with great labour and exactness, near the water-side.

Most of this day's journey was very pleasant. The day, though bright, was not hot, and the appearance of the country, if I had not seen the Peak, would have been wholly new. We went upon a surface so hard and level, that we had little care to hold the bridle, and were therefore at full leisure for contemplation. On the left were high and steepy rocks shaded with birch, the hardy native of the north, and covered with fern or heath. On the right the limpid waters of Lough Ness were beating their bank, and waving their surface by a gentle agitation. Beyond them were rocks sometimes covered with verdure, and sometimes towering in horrid nakedness. Now and then we espied a little corn-field, which served to impress more strongly the general barrenness.

Lough Ness is about twenty-four miles long, and from one mile to two miles broad. It is remarkable that Boethius, in his description of Scotland, gives it twelve miles of breadth. When historians or geographers exhibit false accounts of places far distant, they may be forgiven, because they can tell but what they are told, and that their accounts exceed the truth may be justly supposed, because most men exaggerate to others, if not to themselves. But Boethius lived at no great distance, if he never saw the lake, he must have been very incurious, and if he had seen it, his veracity yielded to very slight temptations.

Lough Ness, though not twelve miles broad, is a very remarkable diffusion of water without islands

It fills a large hollow between two ridges of high rocks, being supplied partly by the torrents which fall into it on either side, and partly, as it is supposed, by springs at the bottom. Its water is remarkably clear and pleasant, and is imagined by the natives to be medicinal. We were told, that it is in some places a hundred and forty fathom deep, a profundity scarcely credible, and which probably those that relate it have never sounded. Its fish are salmon, trout, and pike.

It was said at Fort Augustus, that Lough Ness is open in the hardest winters, though a lake not far from it is covered with ice. In discussing these exceptions from the course of nature, the first question is, whether the fact be justly stated. That which is strange is delightful, and a pleasing error is not willingly detected. Accuracy of narration is not very common, and there are few so rigidly philosophical, as not to represent as perpetual, what is only frequent, or as constant what is really casual. If it be true that Lough Ness never freezes, it is either sheltered by its high banks from the cold blasts, and exposed only to those winds which have more power to agitate than congeal; or it is kept in perpetual motion by the rush of streams from the rocks that inclose it. Its profundity, though it should be such as is represented, can have little part in this exemption, for though deep wells are not frozen, because their water is secluded from the external air, yet where a wide surface is exposed to the full influence of a freezing atmosphere, I know not why the depth should keep it open. Natural philosophy is now one

of the favourite studies of the Scottish nation, and Lough Ness well deserves to be diligently examined

The road on which we travelled, and which was itself a source of entertainment, is made along the rock, in the direction of the Lough, sometimes by breaking off protuberances, and sometimes by cutting the great mass of stone to a considerable depth. The fragments are piled in a loose wall on either side, with apertures left at very short spaces, to give a passage to the wintry currents. Part of it is bordered with low trees, from which our guides gathered nuts, and would have had the appearance of an English lane, except that an English lane is almost always dirty. It has been made with great labour, but has this advantage, that it cannot, without equal labour, be broken up.

Within our sight there were goats feeding or playing. The mountains have red deer, but they came not within view; and if what is said of their vigilance and subtlety be true, they have some claim to that palm of wisdom, which the eastern philosopher, whom Alexander interrogated, gave to those beasts which live furthest from men

Near the way, by the water-side, we espied a cottage. This was the first Highland hut that I had seen; and as our business was with life and manners, we were willing to visit it. To enter a habitation without leave, seems to be not considered here as rudeness or intrusion. The old laws of hospitality still give this licence to a stranger

A hut is constructed with loose stones, ranged for the most part with some tendency to circularity. It must be placed where the wind cannot act upon it

as expensive food, and told us, that in spring, when the goats gave milk, the children could live without it. She is mistress of sixty goats, and I saw many kids in an enclosure at the end of her house. She had also some poultry. By the lake we saw a potatoe-garden, and a small spot of ground on which stood four shucks, containing each twelve sheaves of barley. She has all this from the labour of their own hands, and for what is necessary to be bought, her kids and her chickens are sent to market.

With the true pastoral hospitality, she asked us to sit down and drink whisky. She is religious, and though the kirk is four miles off, probably eight English miles, she goes thither every Sunday. We gave her a shilling, and she begged snuff, for snuff is the luxury of a Highland cottage.

Soon afterwards we came to the General's Hut, so called because it was the temporary abode of Wade, while he superintended the works upon the road. It is now a house of entertainment for passengers, and we found it not ill stocked with provisions.

FALL OF FIERS

Towards evening we crossed by a bridge, the river which makes the celebrated Fall of Fiers. The country at the bridge strikes the imagination with all the gloom and grandeur of Siberian solitude. The way makes a flexure, and the mountains, covered with trees, rise at once on the left hand and in the front. We desired our guides to show us the Fall, and dismounting clambered over very rugged

crag, till I began to wish that our curiosity might have been gratified with less trouble and danger. We came at last to a place where we could overlook the river, and saw a channel torn, as it seems, through black piles of stone, by which the stream is obstructed and broken, till it comes to a very steep descent, of such dreadful depth, that we were naturally inclined to turn aside our eyes.

But we visited the place at an unseasonable time, and found it divested of its dignity and terror. Nature never gives every thing at once. A long continuance of dry weather, which made the rest of the way easy and delightful, deprived us of the pleasure expected from the Fall of Fiers. The river having now no water but what the springs supply, showed us only a swift current, clear and shallow, fretting over the asperities of the rocky bottom; and we were left to exercise our thoughts, by endeavouring to conceive the effect of a thousand streams poured from the mountains into one channel, struggling for expansion in a narrow passage, exasperated by rocks rising in their way, and at last discharging all their violence of waters by a sudden fall through the horrid chasm.

The way now grew less easy, descending by an uneven declivity, but without either dirt or danger. We did not arrive at Fort Augustus till it was late. Mr Boswell, who, between his father's merit and his own, is sure of reception wherever he comes, sent a servant before to beg admission and entertainment for that night. Mr. Trapaud, the governor, treated us with that courtesy which is so closely connected with the military character. He came out to meet

us beyond the gates, and apologized that, at so late an hour, the rules of a garrison suffered him to give us entrance only at the postern.

FORT AUGUSTUS

In the morning we viewed the fort, which is much less than that of St. George, and is said to be commanded by the neighbouring hills. It was not long ago taken by the Highlanders. But its situation seems well chosen for pleasure, if not for strength; it stands at the head of the lake, and, by a sloop of sixty tons, is supplied from Inverness with great convenience.

We were now to cross the Highlands towards the western coast, and to content ourselves with such accommodations, as a way so little frequented could afford. The journey was not formidable, for it was but of two days, very unequally divided, because the only house where we could be entertained, was not further off than a third of the way. We soon came to a high hill, which we mounted by a military road, cut in traverses, so that as we went upon a higher stage, we saw the baggage following us below in a contrary direction. To make this way, the rock has been hewn to a level with labour that might have broken the perseverance of a Roman legion.

The country is totally denuded of its wood, but the stumps both of oaks and firs, which are still sound, show that it has been once a forest of large timber. I do not remember that we saw any animals, but we were told that, in the mountains, there are stags, roebucks, goats, and rabbits.

We did not perceive that this tract was possessed by human beings, except that once we saw a corn-field in which a lady was walking with some gentlemen. The'r house was certainly at no great distance, but so situated that we could not descry it.

Passing on through the dreariness of solitude, we found a party of soldiers from the fort, working on the road, under the superintendence of a serjeant. We told them how kindly we had been treated at the garrison, and as we were enjoying the benefit of their labours, begged leave to show our gratitude by a small present.

ANOECH.

Early in the afternoon we came to Anoch, a village in Glenmollison of three huts, one of which is distinguished by a chimney. Here we were to dine and lodge, and were conducted through the first room, that had the chimney, into another lighted by a small glass window. The landlord attended us with great civility, and told us what he could give us to eat and drink. I found some books on a shelf, among which were a volume or more of Prideaux's Connection.

This I mentioned as something unexpected, and perceived that I did not please him. I praised the propriety of his language, and was answered that I need not wonder, for he had learned it by grammar.

By subsequent opportunities of observation I found that my host's diction had nothing peculiar. Those Highlanders that can speak English commonly speak it well, with few of the words, and little of the tone, by which a Scotchman is distinguished.

Their language seems to have been learned in the army or the navy, or by some communication with those who could give them good examples of accent and pronunciation. By their Lowland neighbours they would not willingly be taught; for they have long considered them as a mean and degenerate race. These prejudices are wearing fast away; but so much of them still remains, that when I asked a very learned minister in the islands, which they considered as their most savage clans "*Those,*" said he, "*that live next the Lowlands.*"

As we came luther early in the day, we had time sufficient to survey the place. The house was built like other huts of loose stones, but the part in which we dined and slept was lined with turf and wattled with twigs, which kept the earth from falling. Near it was a garden of turnips and a field of potatoes. It stands in a glen, or valley, pleasantly watered by a winding river. But this country, however it may delight the gazer or amuse the naturalist, is of no great advantage to its owners. Our landlord told us of a gentleman, who possesses lands, eighteen Scotch miles in length, and three in breadth, a space containing at least a hundred square English miles. He has raised his rents, to the danger of depopulating his farms, and he fells his timber, and by exerting every art of augmentation, has obtained a yearly revenue of four hundred pounds, which for a hundred square miles is three half-pence an acre.

Some time after dinner we were surprised by the entrance of a young woman, not inelegant either in mien or dress, who asked us whether we would have

tea. We found that she was the daughter of our host, and desired her to make it. Her conversation, like her appearance, was gentle and pleasing. We knew that the girls of the Highlands are all gentlewomen, and treated her with great respect, which she received as customary and due, and was neither elated by it, nor confused, but repaid my civilities without embarrassment, and told me how much I honoured her country by coming to survey it.

She had been at Inverness to gain the common female qualifications, and had, like her father, the English pronunciation. I presented her with a book, which I happened to have about me, and should not be pleased to think that she forgets me.

In the evening the soldiers, whom we had passed on the road, came to spend at our inn the little money that we had given them. They had the true military impatience of coin in their pockets, and had marched at least six miles to find the first place where liquor could be bought. Having never been before in a place so wild and unfrequented, I was glad of their arrival, because I knew that we had made them friends, and to gain still more of their good-will, we went to them, where they were carousing in the barn, and added something to our former gift. All that we gave was not much, but it detained them in the barn, either merry or quarrelling, the whole night, and in the morning they went back to their work, with great indignation at the bad qualities of whisky.

We had gained so much the favour of our host, that, when we left his house in the morning, he walked by us a great way, and entertained us with

conversation both on his own condition, and that of the country. His life seemed to be merely pastoral, except that he differed from some of the ancient Nomades in having a settled dwelling. His wealth consists of one hundred sheep, as many goats, twelve milk-cows, and twenty-eight beeves ready for the drover.

From him we first heard of the general dissatisfaction, which is now driving the Highlanders into the other hemisphere; and when I asked him whether they would stay at home, if they were well treated, he answered with indignation, that no man willingly left his native country. Of the farm, which he himself occupied, the rent had, in twenty-five years, been advanced from five to twenty pounds, which he found himself so little able to pay, that he would be glad to try his fortune in some other place. Yet he owned the reasonableness of raising the Highland rents in a certain degree, and declared himself willing to pay ten pounds for the ground which he had formerly had for five.

Our host having amused us for a time, resigned us to our guides. The journey of this day was long, not that the distance was great, but that the way was difficult. We were now in the bosom of the Highlands, with full leisure to contemplate the appearance and properties of mountainous regions, such as have been, in many countries, the last shelters of national distress, and are every where the scenes of adventures, stratagems, surprises, and escapes.

Mountainous countries are not passed but with difficulty, not merely from the labour of climbing;

for to climb is not always necessary. but because that which is not mountain is commonly bog, through which the way must be picked with caution. Where there are hills, there is much rain, and the torrents pouring down into the intermediate spaces, seldom find so ready an outlet, as not to stagnate, till they have broken the texture of the ground

Of the hills, which our journey offered to the view on either side, we did not take the height, nor did we see any that astonished us with their loftiness. Towards the summit of one, there was a white spot, which I should have called a naked rock, but the guides, who had better eyes, and were acquainted with the phænomena of the country, declared it to be snow. It had already lasted to the end of August, and was likely to maintain its contest with the sun, till it should be reinforced by winter.

The height of mountains philosophically considered is properly computed from the surface of the next sea; but as it affects the eye or imagination of the passenger, as it makes either a spectacle or an obstruction, it must be reckoned from the place where the rise begins to make a considerable angle with the plain. In extensive continents the land may, by gradual elevation, attain great height, without any other appearance than that of a plane gently inclined, and if a hill placed upon such raised ground be described, as having its altitude equal to the whole space above the sea, the representation will be fallacious.

These mountains may be properly enough measured from the inland base, for it is not much above the sea. As we advanced at evening towards the

western coast, I did not observe the declivity to be greater than is necessary for the discharge of the inland waters.

We passed many rivers and rivulets, which commonly ran with a clear shallow stream over a hard pebbly bottom. These channels, which seem so much wider than the water that they convey would naturally require, are formed by the violence of wintry floods, produced by the accumulation of innumerable streams that fall in rainy weather from the hills, and bursting away with resistless impetuosity, make themselves a passage proportionate to their mass.

Such capricious and temporary waters cannot be expected to produce many fish. The rapidity of the wintry deluge sweeps them away, and the scantiness of the summer stream would hardly sustain them above the ground. This is the reason why in fording the northern rivers, no fishes are seen, as in England, wandering in the water.

Of the hills many may be called with Homer's *Ida, abundant in springs*, but few can deserve the epithet which he bestows upon Pelion, by *waving their leaves*. They exhibit very little variety; being almost wholly covered with dark heath, and even that seems to be checked in its growth. What is not heath is nakedness, a little diversified by now and then a stream rushing down the steep. An eye accustomed to flowery pastures and waving harvests is astonished and repelled by this wide extent of hopeless sterility. The appearance is that of matter incapable of form or usefulness, dismissed by nature from her care, and disinherited of her

favours, left in its original elemental state, or quickened only with one sullen power of useless vegetation.

It will very readily occur, that this uniformity of barrenness can afford very little amusement to the traveller; that it is easy to sit at home and conceive rocks, and heath, and waterfalls; and that these journeys are useless labours, which neither impregnate the imagination, nor enlarge the understanding. It is true, that of far the greater part of things, we must content ourselves with such knowledge as description may exhibit, or analogy supply; but it is true likewise, that these ideas are always incomplete, and that, at least, till we have compared them with realities, we do not know them to be just. As we see more, we become possessed of more certainties, and consequently gain more principles of reasoning, and found a wider basis of analogy.

Regions mountainous and wild, thinly inhabited, and little cultivated, make a great part of the earth, and he that has never seen them, must live unacquainted with much of the face of nature, and with one of the great scenes of human existence.

As the day advanced towards noon, we entered a narrow valley not very flowery, but sufficiently verdant. Our guides told us, that the horses could not travel all day without rest or meat, and entreated us to stop here, because no grass would be found in any other place. The request was reasonable, and the argument cogent. We therefore willingly dismounted, and diverted ourselves as the place gave us opportunity.

I sat down on a bank, such as a writer of romance might have delighted to feign. I had indeed no trees to whisper over my head, but a clear rivulet streamed at my feet. The day was calm, the air was soft, and all was rudeness, silence, and solitude. Before me, and on either side, were high hills, which, by hindering the eye from ranging, forced the mind to find entertainment for itself. Whether I spent the hour well I know not; for here I first conceived the thought of this narration.

We were in this place at ease and by choice, and had no evils to suffer or to fear; yet the imaginations excited by the view of an unknown and untravelled wilderness are not such as arise in the artificial solitude of parks and gardens, a flattering notion of self-sufficiency, a placid indulgence of voluntary delusions, a secure expansion of the fancy, or a cool concentration of the mental powers. The phantoms which haunt a desert are want, and misery, and danger, the evils of dereliction rush upon the thoughts; man is made unwillingly acquainted with his own weakness, and meditation shows him only how little he can sustain, and how little he can perform. There were no traces of inhabitants, except perhaps a rude pile of clods called a summer hut, in which a herdsman had rested in the favourable seasons. Whoever had been in the place where I then sat, unprovided with provisions, and ignorant of the country, might, at least before the roads were made, have wandered among the rocks, till he had perished with hardship, before he could have found either food or shelter. Yet what are these

hillocks to the ridges of Taurus, or these spots of wilderness to the deserts of America ?

It was not long before we were invited to mount, and continued our journey along the side of a lough, kept full by many streams, which with more or less rapidity and noise crossed the road from the hills on the other hand. These currents, in their diminished state, after several dry months, afforded, to one who has always lived in level countries, an unusual and delightful spectacle ; but in the rainy season, such as every winter may be expected to bring, must precipitate an impetuous and tremendous flood. I suppose the way by which we went, is at this time impassable.

GLENSHEALS

The lough at last ended in a river broad and shallow like the rest, but that it may be passed when it is deeper, there is a bridge over it. Beyond it is a valley called Glensheals, inhabited by the clan of Macrae. Here we found a village called Auknasheals, consisting of many huts, perhaps twenty, built all of dry stone, that is, stones piled up without mortar.

We had, by the direction of the officers at Fort Augustus, taken bread for ourselves, and tobacco for those Highlanders who might show us any kindness. We were now at a place where we could obtain milk, but must have wanted bread if we had not brought it. The people of this valley did not appear to know any English, and our guides now became doubly necessary as interpreters. A woman,

whose hut was distinguished by greater spaciousness and better architecture, brought out some pails of milk. The villagers gathered about us in considerable numbers, I believe without any evil intention, but with a very savage wildness of aspect and manner. When our meal was over, Mr Boswell sliced the bread, and divided it amongst them, as he supposed them never to have tasted a wheaten loaf before. He then gave them little pieces of twisted tobacco, and among the children we distributed a small handful of halfpence, which they received with great eagerness. Yet I have been since told, that the people of that valley are not indigent, and when we mentioned them afterwards as needy and pitiable, a Highland lady let us know that we might spare our commiseration; for the dame whose milk we drank had probably more than a dozen milk-cows. She seemed unwilling to take any price, but being pressed to make a demand, at last named a shilling. Honesty is not greater where elegance is less. One of the by-standers, as we were told afterwards, advised her to ask more, but she said a shilling was enough. We gave her half a crown, and I hope got some credit by our behaviour; for the company said, if our interpreters do not flatter us, that they had not seen such a day since the old laird of Macleod passed through their country.

The Macraes, as we heard afterwards in the Hebrides, were originally an indigent and subordinate clan, and having no farms nor stock, were in great numbers servants to the Maclellans, who, in the war of Charles the First, took arms at the

call of the heroick Montrose, and were, in one of his battles, almost all destroyed. The women that were left at home, being thus deprived of their husbands, like the Scythian ladies of old, married their servants, and the Macraes became a considerable race.

THE HIGHLANDS

As we continued our journey, we were at leisure to extend our speculations, and to investigate the reason of those peculiarities by which such rugged regions as these before us are generally distinguished.

Mountainous countries commonly contain the original, at least the oldest race of inhabitants, for they are not easily conquered, because they must be entered by narrow ways, exposed to every power of mischief from those that occupy the heights, and every new ridge is a new fortress, where the defendants have again the same advantages. If the assailants either force the strait, or storm the summit, they gain only so much ground, their enemies are fled to take possession of the next rock, and the pursuers stand at gaze, knowing neither where the ways of escape wind among the steeps, nor where the bog has firmness to sustain them. besides that, mountaineers have an agility in climbing and descending distinct from strength or courage, and attainable only by use.

If the war be not soon concluded, the invaders are dislodged by hunger, for in those anxious and toilsome marches, provisions cannot easily be carried, and are never to be found. The wealth of mountains is cattle, which, while the men stand in the

passes, the women drive away. Such lands at last cannot repay the expense of conquest, and therefore perhaps have not been so often invaded by the mere ambition of dominion; as by resentment of robberies and insults, or the desire of enjoying in security the more fruitful provinces.

As mountaineers are long before they are conquered, they are likewise long before they are civilized. Men are softened by intercourse mutually profitable, and instructed by comparing their own notions with those of others. Thus Cæsar found the maritime parts of Britain made less barbarous by their commerce with the Gauls. Into a barren and rough tract no stranger is brought either by the hope of gain or of pleasure. The inhabitants having neither commodities for sale, nor money for purchase, seldom visit more polished places, or if they do visit them, seldom return.

It sometimes happens that by conquest, intermixture, or gradual refinement, the cultivated parts of a country change their language. The mountaineers then become a distinct nation, cut off by dissimilitude of speech from conversation with their neighbours. Thus in Biscay, the original Cantabrian, and in Dalecarlia, the old Swedish still subsists. Thus Wales and the Highlands speak the tongue of the first inhabitants of Britain, while the other parts have received first the Saxon, and in some degree afterwards the French, and then formed a third language between them.

That the primitive manners are continued where the primitive language is spoken, no nation will desire me to suppose, for the manners of mountaineers

are commonly savage, but they are rather produced by then situation than derived from their ancestors.

Such seems to be the disposition of man, that whatever makes a distinction produces rivalry England, before other causes of enmity were found, was disturbed for some centuries by the contests of the northern and southern counties; so that at Oxford, the peace of study could for a long time be preserved only by choosing annually one of the proctors from each side of the Trent A tract, intersected by many ridges of mountains, naturally divides its inhabitants into petty nations, which are made by a thousand causes enemies to each other. Each will exalt its own chiefs, each will boast the valour of its men, or the beauty of its women, and every claim of superiority irritates competition, injuries will sometimes be done, and be more injuriously defended; retaliation will sometimes be attempted, and the debt exacted with too much interest.

In the Highlands it was a law, that if a robber was sheltered from justice, any man of the same clan might be taken in his place. This was a kind of irregular justice, which, though necessary in savage times, could hardly fail to end in a feud; and a feud once kindled among an idle people, with no variety of pursuits to divert their thoughts, burnt on for ages, either sullenly glowing in secret mischief, or openly blazing into publick violence Of the effects of this violent judicature, there are not wanting memorials The cave is now to be seen to which one of the Campbells, who had injured the Macdonalds, retired with a body of his own clan. The Macdonalds

required the offender, and being refused, made a fire at the mouth of the cave, by which he and his adherents were suffocated together.

Mountaineers are warlike, because by their feuds and competitions they consider themselves as surrounded with enemies, and are always prepared to repel incursions, or to make them. Like the Greeks in their unpolished state, described by Thucydides, the Highlanders, till lately, went always armed, and carried their weapons to visits, and to church

Mountaineers are thievish, because they are poor, and having neither manufactures nor commerce, can grow richer only by robbery. They regularly plunder their neighbours, for their neighbours are commonly their enemies; and having lost that reverence for property, by which the order of civil life is preserved, soon consider all as enemies, whom they do not reckon as friends, and think themselves licensed to invade whatever they are not obliged to protect

By a strict administration of the laws, since the laws have been introduced into the Highlands, this disposition to thievery is very much repressed. Thirty years ago no herd had ever been conducted through the mountains, without paying tribute in the night to some of the clans; but cattle are now driven, and passengers travel, without danger, fear, or molestation

Among a warlike people, the quality of highest esteem is personal courage, and with the ostentatious display of courage are closely connected promptitude of offence, and quickness of resentment. The Highlanders before they were disarmed, were so addicted to quarrels, that the boys

used to follow any publick procession or ceremony, however festive or however solemn, in expectation of the battle, which was sure to happen before the company dispersed .

Mountainous régions are sometimes so remote from the seat of government, and so difficult of access, that they are very little under the influence of the sovereign, or within the reach of national justice. Law is nothing without power, and the sentence of a distant court could not be easily executed, nor perhaps very safely promulgated, among men ignorantly proud and habitually violent, unconnected with the general system, and accustomed to reverence only their own lords. It has therefore been necessary to erect many particular jurisdictions, and commit the punishment of crimes, and the decision of right, to the proprietors of the country who could enforce their own decrees. It immediately appears that such judges will be often ignorant, and often partial; but in the immaturity of political establishments no better expedient could be found. As government advances towards perfection, provincial judicature is perhaps in every empire gradually abolished.

Those who had thus the dispensation of law, were by consequence themselves lawless. Their vassals had no shelter from outrages and oppressions; but were condemned to endure, without resistance, the caprices of wantonness, and the rage of cruelty.

In the Highlands, some great lords had an hereditary jurisdiction over counties; and some chieftains over their own lands, till the final conquest

of the Highlands afforded an opportunity of crushing all the local courts, and of extending the general benefits of equal law to the low and the high, in the deepest recesses and obscurest corners

While the chiefs had this resemblance of royalty, they had little inclination to appeal, on any question, to superior judicatures. A claim of lands between two powerful lairds was decided like a contest for dominion between sovereign powers. They drew their forces into the field, and right attended on the strongest. This was, in ruder times, the common practice, which the kings of Scotland could seldom control

Even so lately as in the last years of king William, a battle was fought at Mull Roy, on a plain a few miles to the south of Inverness, between the clans of Mackintosh and Macdonald of Keppoch. Colonel Macdonald, the head of a small clan, refused to pay the dues demanded from him by Mackintosh, as his superior lord. They disdained the interposition of judges and laws, and calling each his followers to maintain the dignity of the clan, fought a formal battle, in which several considerable men fell on the side of Mackintosh, without a complete victory to either. This is said to have been the last open war made between the clans by their own authority.

The Highland lords made treaties, and formed alliances, of which some traces may still be found, and some consequences still remain as lasting evidences of petty regality. The terms of one of these confederacies were, that each should support the other in the right, or in the wrong, except against the king

The inhabitants of mountains form distinct races, and are careful to preserve their genealogies. Men in a small district necessarily mingle blood by intermarriages, and combine at last into one family, with a common interest in the honour and disgrace of every individual. Then begins that union of affections, and co-operation of endeavours, that constitute a clan. They who consider themselves as ennobled by their family, will think highly of their progenitors, and they who through successive generations live always together in the same place, will preserve local stories and hereditary prejudices. Thus every Highlander can talk of his ancestors, and recount the outrages which they suffered from the wicked inhabitants of the next valley.

Such are the effects of habitation among mountains, and such were the qualities of the Highlanders, while their rocks secluded them from the rest of mankind, and kept them an unaltered and discriminated race. They are now losing their distinction, and hastening to mingle with the general community.

GLENELG.

We left Auknasheals and the Macraes in the afternoon, and in the evening came to Ratiken, a high hill on which a road is cut, but so steep and narrow that it is very difficult. There is now a design of making another way round the bottom. Upon one of the precipices, my horse, weary with the steepness of the rise, staggered a little, and I called in haste to the Highlander to hold him.

This was the only moment of my journey in which I thought myself endangered

Having surmounted the hill at last, we were told, that at Glenelg, on the sea-side, we should come to a house of lime and slate and glass. This image of magnificence raised our expectation. At last we came to our inn weary and peevish, and began to inquire for meat and beds.

Of the provisions, the negative catalogue was very copious. Here was no meat, no milk, no bread, no eggs, no wine. We did not express much satisfaction. Here however we were to stay. Whisky we might have, and I believe at last they caught a fowl and killed it. We had some bread, and with that we prepared ourselves to be contented, when we had a very eminent proof of Highland hospitality. Along some miles of the way in the evening, a gentleman's servant had kept us company on foot with very little notice on our part. He left us near Glenelg, and we thought on him no more till he came to us again, in about two hours, with a present from his master of rum and sugar. The man had mentioned his company, and the gentleman, whose name, I think, is Gordon, well knowing the penury of the place, had this attention to two men, whose names perhaps he had not heard, by whom his kindness was not likely to be ever repaid, and who could be recommended to him only by their necessities

We were now to examine our lodging. Out of one of the beds, on which we were to repose, started up, at our entrance, a man black as a Cyclops from the forge. Other circumstances of no elegant re-

cital concurred to disgust us. We had been frightened by a lady at Edinburgh, with discouraging representations of Highland lodgings. Sleep, however, was necessary. Our Highlanders had at last found some hay, with which the inn could not supply them. I directed them to bring a bundle into the room, and slept upon it in my riding coat. Mr. Boswell being more delicate, laid himself sheets with hay over and under him, and lay in linen like a gentleman.

SKY. ARMIDEL.

In the morning, September the twentieth, we found ourselves on the edge of the sea. Having procured a boat, we dismissed our Highlanders, whom I would recommend to the service of any future travellers, and were ferried over to the isle of Sky. We landed at Armidel, where we were met on the sands by Sir Alexander Macdonald, who was at that time there with his lady, preparing to leave the island, and reside at Edinburgh.

Armidel is a neat house, built where the Macdonalds had once a seat, which was burnt in the commotions that followed the Revolution. The walled orchard, which belonged to the former house, still remains. It is well shaded by tall ash trees, of a species, as Mr. James the fossilist informed me, uncommonly valuable. This plantation is very properly mentioned by Dr. Campbell, in his new account of the state of Britain, and deserves attention, because it proves that the present nakedness of the Hebrides is not wholly the fault of nature.

As we sat at Sir Alexander's table, we were entertained, according to the ancient usage of the north, with the melody of the bagpipe. Every thing in those countries has its history. As the bagpiper was playing, an elderly gentleman informed us, that in some remote time, the Macdonalds of Glengary having been injured, or offended by the inhabitants of Culloden, and resolving to have justice or vengeance, came to Culloden on a Sunday, where, finding their enemies at worship, they shut them up in the church, which they set on fire; and this said he, is the tune that the piper played while they were burning.

Narrations like this, however uncertain, deserve the notice of a traveller, because they are the only records of a nation that has no historians, and afford the most genuine representation of the life and character of the ancient highlanders

Under the denomination of Highlander are comprehended in Scotland all that now speak the Erse language, or retain the primitive manners, whether they live among the mountains or in the islands; and in that sense I use the name, when there is not some apparent reason for making a distinction

In Sky I first observed the use of brogues, a kind of artless shoes, stitched with thongs so loosely, that though they defend the foot from stones, they do not exclude water. Brogues were formerly made of raw hides, with the hair inwards, and such are perhaps still used in rude and remote parts; but they are said not to last above two days. Where life is somewhat improved, they are now made of leather tanned with oak bark, as in other places, or with

the bark of birch, or roots of tormentil, a substance recommended in defect of bark, about forty years ago, to the Irish tanners, by one to whom the parliament of that kingdom voted a reward. The leather of Sky is not completely penetrated by vegetable matter, and therefore cannot be very durable.

My inquiries about brogues gave me an early specimen of Highland information. One day I was told, that to make brogues was a domestick art, which every man practised for himself, and that a pair of brogues was the work of an hour. I supposed that the husband made brogues as the wife made an apron, till next day it was told me, that a brogue-maker was a trade, and that a pair would cost half a crown. It will easily occur that these representations may both be true, and that, in some places, men may buy them, and in others make them for themselves; but I had both the accounts in the same house within two days.

Many of my subsequent inquiries upon more interesting topicks ended in the like uncertainty. He that travels in the Highlands may easily saturate his soul with intelligence, if he will acquiesce in the first account. The Highlander gives to every question an answer so prompt and peremptory, that scepticism itself is dared into silence, and the mind sinks before the bold reporter in unresisting credulity, but if a second question be ventured, it breaks the enchantment, for it is immediately discovered, that what was told so confidently was told at hazard, and that such fearlessness of assertion was either the sport of negligence, or the refuge of ignorance.

If individuals are thus at variance with themselves, it can be no wonder that the accounts of different men are contradictory. The traditions of an ignorant and savage people have been for ages negligently heard, and unskilfully related. Distant events must have been mingled together, and the actions of one man given to another. These, however, are deficiencies in story, for which no man is now to be censured. It were enough, if what there is yet opportunity of examining were accurately inspected, and justly represented, but such is the laxity of Highland conversation, that the inquirer is kept in continual suspense, and by a kind of intellectual retrogradation, knows less as he hears more.

In the islands the plaid is rarely worn. The law by which the Highlanders have been obliged to change the form of their dress, has, in all the places that we have visited, been universally obeyed. I have seen only one gentleman completely clothed in the ancient habit, and by him it was worn only occasionally and wantonly. The common people do not think themselves under any legal necessity of having coats, for they say that the law against plaids was made by lord Hardwicke, and was in force only for his life but the same poverty that made it then difficult for them to change their clothing, hinders them now from changing it again.

The fillibeg, or lower garment, is still very common, and the bonnet almost universal; but their attire is such as produces, in a sufficient degree, the effect intended by the law, of abolishing the dissimilitude of appearance between the Highlanders

and the other inhabitants of Britain; and, if dress be supposed to have much influence, facilitates their coalition with their fellow-subjects

What we have long used we naturally like, and therefore the Highlanders were unwilling to lay aside their plaid, which yet to an unprejudiced spectator must appear an incommodious and cumbersome dress, for hanging loose upon the body, it must flutter in a quick motion, or require one of the hands to keep it close. The Romans always laid aside the gown when they had any thing to do. It was a dress so unsuitable to war, that the same word which signified a gown signified peace. The chief use of a plaid seems to be this, that they could commodiously wrap themselves in it, when they were obliged to sleep without a better cover.

In our passage from Scotland to Sky, we were wet for the first time with a shower. This was the beginning of the Highland winter, after which we were told that a succession of three dry days was not to be expected for many months. The winter of the Hebrides consists of little more than rain and wind. As they are surrounded by an ocean never frozen, the blasts that come to them over the water are too much softened to have the power of congelation. The salt loughs, or inlets of the sea, which shoot very far into the island, never have any ice upon them, and the pools of fresh water will never bear the walker. The snow that sometimes falls, is soon dissolved by the air, or the rain.

This is not the description of a cruel climate, yet the dark months are here a time of great distress; because the summer can do little more than feed it-

self, and winter comes with its cold and its scarcity upon families very slenderly provided.

CORIATACHAN IN SKY

The third or fourth day after our arrival at Armidel, brought us an invitation to the isle of Raasay, which lies east of Sky. It is incredible how soon the account of any event is propagated in these narrow countries by the love of talk, which much leisure produces, and the relief given to the mind in the penury of insular conversation by a new topic. The arrival of strangers at a place so rarely visited excites rumour, and quickens curiosity. I know not whether we touched at any corner, where fame had not already prepared us a reception.

To gain a commodious passage to Raasay, it was necessary to pass over a large part of Sky. We were furnished, therefore, with horses and a guide. In the islands there are no roads, nor any marks by which a stranger may find his way. The horseman has always at his side a native of the place, who, by pursuing game, or tending cattle, or being often employed in messages or conduct, has learned where the ridge of the hill has breadth sufficient to allow a horse and his rider a passage, and where the moss or bog is hard enough to bear them. The bogs are avoided as toilsome at least, if not unsafe, and therefore the journey is made generally from precipice to precipice, from which if the eye ventures to look down, it sees below a gloomy cavity, whence the rush of water is sometimes heard.

But there seems to be in all this more alarm than danger. The Highlander walks carefully before,

and the horse, accustomed to the ground, follows him with little deviation. Sometimes the hill is too steep for the horseman to keep his seat, and sometimes the moss is too tremulous to bear the double weight of horse and man. The rider then dismounts, and all shift as they can.

Journies made in this manner are rather tedious than long. A very few miles require several hours. From Armidel we came at night to Coriatachan, a house very pleasantly situated between two brooks, with one of the highest hills of the island behind it. It is the residence of Mr. Mackinnon, by whom we were treated with very liberal hospitality, among a more numerous and elegant company than it could have been supposed easy to collect.

The hill behind the house we did not climb. The weather was rough, and the height and steepness discouraged us. We were told that there is a cairne upon it. A cairne is a heap of stones thrown upon the grave of one eminent for dignity of birth, or splendour of achievements. It is said, that by digging, an urn is always found under these cairnes: they must therefore have been thus piled by a people whose custom was to burn the dead. To pile stones is, I believe, a northern custom, and to burn the body was the Roman practice, nor do I know when it was that these two acts of sepulture were united.

The weather was next day too violent for the continuation of our journey; but we had no reason to complain of the interruption. We saw in every place, what we chiefly desired to know, the manners of the people. We had company, and if

But as here is nothing to be bought, every family must kill its own meat, and roast part of it somewhat sooner than Apicius would prescribe. Every kind of flesh is undoubtedly excelled by the variety and emulation of English markets, but that which is not best may be yet very far from bad, and he that shall complain of his fare in the Hebrides has improved his delicacy more than his manhood.

Their fowls are not like those plumped for sale by the poultereis of London, but they are as good as other places commonly afford, except that the geese, by feeding in the sea, have universally a fishy rankness

These geese seem to be of a middle race, between the wild and domestick kinds. They are so tame as to own a home, and so wild as sometimes to fly quite away

Their native bread is made of oats, or barley. Of oatmeal they spread very thin cakes, coarse and hard, to which unaccustomed palates are not easily reconciled. The barley cakes are thicker and softer, I began to eat them without unwillingness, the blackness of their colour raises some dislike, but the taste is not disagreeable. In most houses there is wheat-flour, with which we were sure to be treated, if we staid long enough to have it kneaded and baked. As neither yeast nor leaven are used among them, their bread of every kind is unfermented. They make only cakes, and never mould a loaf

A man of the Hebrides, for of the women's diet I can give no account, as soon as he appears in the morning, swallows a glass of whisky, yet they are

not a drunken race, at least I never was present at much intemperance; but no man is so abstemious as to refuse the morning drann, which they call a *shall*.

The word *whis/ky* signifies water, and is applied by way of eminence to *strong water*, or distilled liquor. The spirit drunk in the North is drawn from barley. I never tasted it, except once for experiment at the inn in Inverary, when I thought it preferable to any English malt brandy. It was strong, but not pungent, and was free from the empyreumatick taste or smell. What was the process I had no opportunity of inquiring, nor do I wish to improve the art of making poison pleasant.

Not long after the dinn, may be expected the breakfast, a meal in which the Scots, whether of the lowlands or mountains, must be confessed to excel us. The tea and coffee are accompanied not only with butter, but with honey, conserves, and marmalades. If an epicure could remove by a wish, in quest of sensual gratifications, wherever he had supped he would breakfast in Scotland.

In the islands, however, they do what I found it not very easy to endure. They pollute the tea-table by plates piled with large slices of Cheshire cheese, which mingles its less grateful odours with the fragrance of the tea.

Where many questions are to be asked, some will be omitted. I forgot to inquire how they were supplied with so much exoticick luxury. Perhaps the French may bring them wine for wool, and the Dutch give them tea and coffee at the fishing season, in exchange for fresh provision. Their trade is unconstrained, they pay no customs, for there is no

officer to demand them; whatever therefore is made dear only by impost, is obtained here at an easy rate.

A dinner in the Western Islands differs very little from a dinner in England, except that in the place of tarts, there are always set different preparations of milk. This part of their diet will admit some improvement. Though they have milk, and eggs, and sugar, few of them know how to compound them in a custard. Their gardens afford them no great variety, but they have always some vegetables on the table. Potatoes at least are never wanting, which, though they have not known them long, are now one of the principal parts of their food. They are not of the mealy, but the viscous kind.

Their more elaborate cookery, or made dishes, an Englishman, at the first taste, is not likely to approve, but the culinary compositions of every country are often such as become grateful to other nations only by degrees, though I have read a French author, who, in the elation of his heart, says, that French cookery pleases all foreigners, but foreign cookery never satisfies a Frenchman.

Their suppers are like their dinners, various and plentiful. The table is always covered with elegant linen. Their plates for common use are often of that kind of manufacture which is called cream-coloured, or queen's ware. They use silver on all occasions where it is common in England, nor did I ever find a spoon of horn but in one house.

The knives are not often either very bright, or very sharp. They are indeed instruments of which the Highlanders have not been long acquainted with

the general use. They were not regularly laid on the table, before the prohibition of arms, and the change of dress. Thirty years ago the Highlander wore his knife as a companion to his dirk or dagger, and when the company sat down to meat, the men who had knives cut the flesh into small pieces for the women, who with their fingers conveyed it to their mouths.

There was perhaps never any change of national manners so quick, so great, and so general, as that which has operated in the Highlands, by the last conquest, and the subsequent laws. We came thither too late to see what we expected, a people of peculiar appearance, and a system of antiquated life. The clans retain little now of their original character, their ferocity of temper is softened, their military ardour is extinguished, their dignity of independence is depressed, their contempt of government subdued, and their reverence for their chiefs abated. Of what they had before the late conquest of their country, there remain only their language and their poverty. Their language is attacked on every side. Schools are erected, in which English only is taught, and there were lately some who thought it reasonable to refuse them a version of the holy scriptures, that they might have no monument of their mother-tongue.

That their poverty is gradually abated, cannot be mentioned among the unpleasing consequences of subjection. They are now acquainted with money, and the possibility of gain will by degrees make them industrious. Such is the effect of the late regulations, that a longer journey than to the

Highlands must be taken by him whose curiosity pants for savage virtues and barbarous grandeur.

RAASAY

At the first intermission of the stormy weather we were informed, that the boat, which was to convey us to Raasay, attended us on the coast. We had from this time our intelligence facilitated, and our conversation enlarged, by the company of Mr Macqueen, minister of a parish in Sky, whose knowledge and politeness give him a title equally to kindness and respect, and who, from this time, never forsook us till we were preparing to leave Sky, and the adjacent places.

The boat was under the direction of Mr. Malcolm Macleod, a gentleman of Raasay. The water was calm, and the rowers were vigorous, so that our passage was quick and pleasant. When we came near the island, we saw the laird's house, a neat modern fabrick, and found Mr Macleod, the proprietor of the island, with many gentlemen, expecting us on the beach. We had, as at all other places, some difficulty in landing. The crags were irregularly broken, and a false step would have been very mischievous.

It seemed that the rocks might with no great labour have been hewn almost into a regular flight of steps; and as there are no other landing places, I considered this rugged ascent as the consequence of a form of life inured to hardships, and therefore not studious of nice accommodations. But I know not whether, for many ages, it was not considered

as a part of military policy, to keep the country not easily accessible. The rocks are natural fortifications, and an enemy climbing with difficulty was easily destroyed by those who stood high above him.

Our reception exceeded our expectations. We found nothing but civility, elegance, and plenty. After the usual refreshments, and the usual conversation, the evening came upon us. The carpet was then rolled off the floor; the musician was called, and the whole company was invited to dance, nor did ever fairies trip with greater alacrity. The general air of festivity, which predominated in this place, so far remote from all those regions which the mind has been used to contemplate as the mansions of pleasure, struck the imagination with a delightful surprise, analogous to that which is felt at an unexpected emersion from darkness into light.

When it was time to sup, the dance ceased, and six-and-thirty persons sat down to two tables in the same room. After supper the ladies sung Erse songs, to which I listened as an English audience to an Italian opera, delighted with the sound of words which I did not understand.

I inquired the subjects of the songs, and was told of one, that it was a love song, and of another, that it was a farewell composed by one of the islanders that was going, in this epidemical fury of emigration, to seek his fortune in America. What sentiments would rise, on such an occasion, in the heart of one who had not been taught to lament by precedent, I should gladly have known; but the lady, by whom I sat, thought herself not equal to the work of translating.

Mr. Macleod is the proprietor of the islands of Raasay, Rona, and Fladda, and possesses an extensive district in Sky. The estate has not, during four hundred years, gained or lost a single acre.

One of the old Highland alliances has continued for two hundred years, and is still subsisting between Macleod of Raasay, and Macdonald of Sky, in consequence of which, the survivor always inherits the arms of the deceased, a natural memorial of military friendship. At the death of the late Sir James Macdonald, his sword was delivered to the present laird of Raasay.

The family of Raasay consists of the laird, the lady, three sons, and ten daughters. For the sons there is a tutor in the house, and the lady is said to be very skilful and diligent in the education of her girls. More gentleness of manners, or a more pleasing appearance of domestick society, is not found in the most polished countries.

Raasay is the only inhabited island in Mr Macleod's possession. Rona and Fladda afford only pasture for cattle, of which one hundred and sixty winter in Rona, under the superintendence of a solitary heidsman.

The length of Raasay is, by computation, fifteen miles, and the breadth two. These countries have never been measured, and the computation by miles is negligent and arbitrary. We observed in travelling, that the nominal and real distance of places had very little relation to each other. Raasay probably contains near a hundred square miles. It affords not much ground, notwithstanding its extent, either for tillage or pasture, for it is rough,

rocky, and barren The cattle often perish by falling from the precipices. It is like the other islands, I think, generally naked of shade, but it is naked by neglect, for the laird has an orchard, and very large forest trees grow about his house. Like other hilly countries, it has many rivulets One of the brooks turns a corn-mill, and at least one produces trouts

In the streams or fresh lakes of the islands, I have never heard of any other fish than trouts and eels The trouts which I have seen are not large, the colour of their flesh is tinged as in England Of their eels I can give no account, having never tasted them; for I believe they are not considered as wholesome food

It is not very easy to fix the principles upon which mankind have agreed to eat some animals, and reject others, and as the principle is not evident, it is not uniform That which is selected as delicate in one country, is by its neighbours abhorred as loathsome The Neapolitans lately refused to eat potatoes in a famine An Englishman is not easily persuaded to dine on snails with an Italian, on frogs with a Frenchman, or on horse-flesh with a Tartar The vulgar inhabitants of Sky, I know not whether of the other islands, have not only eels, but pork and bacon in abhorrence, and accordingly I never saw a hog in the Hebrides, except one at Dunvegan

Raasay has wild fowl in abundance, but neither deer, hares, nor rabbits Why it has them not, might be asked, but that of such questions there is

no end Why does any nation want what it might have? Why are not spices transplanted to America? Why does tea continue to be brought from China? Life improves but by slow degrees, and much in every place is yet to do. Attempts have been made to raise roebucks in Raasay, but without effect The young ones it is extremely difficult to rear, and the old can very seldom be taken alive

Hares and rabbits might be more easily obtained. That they have few or none of either in Sky, they impute to the ravage of the foxes, and have therefore set, for some years past, a price upon their heads, which, as the number was diminished, has been gradually raised, from three shillings and sixpence to a guinea, a sum so great in this part of the world, that in a short time Sky may be as free from foxes, as England from wolves The fund for these rewards is a tax of sixpence in the pound, imposed by the farmers on themselves, and said to be paid with great willingness.

The beasts of prey in the islands are foxes, otters, and weasels. The foxes are bigger than those of England, but the otters exceed ours in a far greater proportion I saw one at Armidel, of a size much beyond that which I supposed them ever to attain, and Mr. Maclean, the heir of Col, a man of middle stature, informed me that he once shot an otter, of which the tail reached the ground, when he held up the head to a level with his own. I expected the otter to have a foot particularly formed for the art of swimming, but, upon examination, I did not find it differing much from that of a spaniel As

he preys in the sea, he does little visible mischief, and is killed only for his fur. White otters are sometimes seen

In Raasay they might have hares and rabbits, for they have no foxes. Some depredations, such as were never made before, have caused a suspicion that a fox has been lately landed in the island by spite or wantonness. This imaginary stranger has never yet been seen, and therefore, perhaps, the mischief was done by some other animal. It is not likely that a creature so ungentle, whose head could have been sold in Sky for a guinea, should be kept alive only to gratify the malice of sending him to prey upon a neighbour and the passage from Sky is wider than a fox would venture to swim, unless he were chased by dogs into the sea, and perhaps then his strength would enable him to cross. How beasts of prey came into any islands is not easy to guess. In cold countries they take advantage of hard winters, and travel over the ice, but this is a very scanty solution, for they are found where they have no discoverable means of coming.

The corn of this island is but little. I saw the harvest of a small field. The women reaped the corn, and the men bound up the sheaves. The strokes of the sickle were timed by the modulation of the harvest-song, in which all their voices were united. They accompany in the Highlands every action, which can be done in equal time, with an appropriated strain, which has, they say, not much meaning, but its effects are regularity and cheerfulness. The ancient proceleusmatick song, by which the rowers of gallees were animated, may be

supposed to have been of this kind. There is now an oar-song used by the Hebridiens.

The ground of Raasay seems fitter for cattle than for corn, and of black cattle I suppose the number is very great. The land himself keeps a herd of four hundred, one hundred of which are annually sold. Of an extensive domain, which he holds in his own hands, he considers the sale of cattle as repaying him the rent, and supports the plenty of a very liberal table with the remaining product.

Raasay is supposed to have been very long inhabited. On one side of it they show caves, into which the rude nations of the first ages retreated from the weather. These dreary vaults might have had other uses. There is still a cavity near the house called the oar-cave, in which the seamen, after one of those piratical expeditions, which in rougher times was very frequent, used, as tradition tells, to hide their oars. This hollow was near the sea, that nothing so necessary might be far to be fetched, and it was secret, that enemies, if they landed, could find nothing. Yet it is not very evident of what use it was to hide their oars from those, who, if they were masters of the coast, could take away their boats.

A proof much stronger of the distance at which the first possessors of this island lived from the present time, is afforded by the stone heads of arrows which are very frequently picked up. The people call them elf bolts, and believe that the fairies shoot them at the cattle. They nearly resemble those which Mr. Banks has lately brought from the savage countries in the Pacifick Ocean, and must have been

made by a nation to which the use of metals was unknown.

The number of this little community has never been counted by its ruler, nor have I obtained any positive account, consistent with the result of political computation. Not many years ago, the late laird led out one hundred men upon a military expedition. The sixth part of a people is supposed capable of bearing arms: Raasay had therefore six hundred inhabitants. But because it is not likely, that every man able to serve in the field would follow the summons, or that the chief would leave his lands totally defenceless, or take away all the hands qualified for labour, let it be supposed, that half as many might be permitted to stay at home. The whole number will then be nine hundred, or nine to a square mile, a degree of populousness greater than those tracts of desolation can often show. They are content with their country, and faithful to their chiefs, and yet uninfected with the fever of migration.

Near the house at Raasay is a chapel unroofed and ruinous, which has long been used only as a place of burial. About the churches in the islands are small squares enclosed with stones which belong to particular families, as repositories for the dead. At Raasay there is one, I think for the proprietor, and one for some collateral house.

It is told by Martin, that at the death of the lady of the island, it has been here the custom to erect a cross. This we found not to be true. The stones that stand about the chapel at a small distance, some of which perhaps have crosses cut upon them, are believed to have been not funeral monuments,

but the ancient boundaries of the sanctuary or consecrated ground.

Martin was a man not illiterate : he was an inhabitant of Sky, and therefore was within reach of intelligence, and with no great difficulty might have visited the places which he undertakes to describe, yet with all his opportunities, he has often suffered himself to be deceived. He lived in the last century, when the chiefs of the clans had lost little of their original influence. The mountains were yet unpenetrated, no inlet was opened to foreign novelties, and the feudal institutions operated upon life with their full force. He might therefore have displayed a series of subordination and a form of government, which, in more luminous and improved regions, have been long forgotten, and have delighted his readers with many uncouth customs that are now disused, and wild opinions that prevail no longer. But he probably had not knowledge of the world sufficient to qualify him for judging what would deserve or gain the attention of mankind. The mode of life which was familiar to himself, he did not suppose unknown to others, nor imagined that he could give pleasure by telling that of which it was, in his little country, impossible to be ignorant.

What he has neglected cannot now be performed. In nations, where there is hardly the use of letters, what is once out of sight is lost for ever. They think but little, and of their few thoughts, none are wasted on the past, in which they are neither interested by fear nor hope. Their only registers are stated observances and practical representations

For this reason an age of ignorance is an age of ceremony. Pageants, and processions, and commemorations, gradually shrink away, as better methods come into use of recording events, and preserving rights

It is not only in Raasay that the chapel is unroofed and useless; through the few islands which we visited we neither saw nor heard of any house of prayer, except in Sky, that was not in ruins. The malignant influence of Calvinism has blasted ceremony and decency together; and if the remembrance of papal superstition is obliterated, the monuments of papal piety are likewise effaced

It has been, for many years, popular to talk of the lazy devotion of the Romish clergy; over the sleepy laziness of men that erected churches, we may indulge our superiority with a new triumph, by comparing it with the fervid activity of those who suffer them to fall.

Of the destruction of churches, the decay of religion must in time be the consequence; for while the publick acts of the ministry are now performed in houses, a very small number can be present, and as the greater part of the islanders make no use of books, all must necessarily live in total ignorance who want the opportunity of vocal instruction.

From these remains of ancient sanctity, which are every where to be found, it has been conjectured, that, for the last two centuries, the inhabitants of the islands have decreased in number. This argument, which supposes that the churches have been suffered to fall, only because they were no longer ne-

cessary, would have some force, if the houses of worship still remaining were sufficient for the people. But since they have now no churches at all, these venerable fragments do not prove the people of former times to have been more numerous, but to have been more devout. If the inhabitants were doubled with their present principles, it appears not that any provision for publick worship would be made. Where the religion of a country enforces consecrated buildings, the number of those buildings may be supposed to afford some indication, however uncertain, of the populousness of the place, but where by a change of manners a nation is contented to live without them, their decay implies no diminution of inhabitants.

Some of these dilapidations are said to be found in islands now uninhabited; but I doubt whether we can thence infer that they were ever peopled. The religion of the middle age is well known to have placed too much hope in lonely austerities. Voluntary solitude was the great art of propitiation, by which crimes were effaced, and conscience was appeased, it is therefore not unlikely, that oratories were often built in places where retirement was sure to have no disturbance.

Raasay has little that can detain a traveller, except the laird and his family, but their power wants no auxiliaries. Such a seat of hospitality, amidst the winds and waters, fills the imagination with a delightful contrariety of images. Without is the rough ocean and the rocky land, the beating billows and the howling storm; within is plenty and elegance, beauty and gaiety, the song and the

dance. In Raasay, if I could have found an Ulysses, I had fancied a Phæacia.

DUNVEGAN

At Raasay, by good fortune, Macleod, so the chief of the clan is called, was paying a visit, and by him we were invited to his seat at Dunvegan. Raasay has a stout boat, built in Norway, in which, with six oars, he conveyed us back to Sky. We landed at Port Re, so called, because James the Fifth of Scotland, who had curiosity to visit the islands, came into it. The port is made by an inlet of the sea, deep and narrow, where a ship lay waiting to dispeople Sky, by carrying the natives away to America.

In coasting Sky, we passed by the cavern in which it was the custom, as Martin relates, to catch birds in the night, by making a fire at the entrance. This practice is disused; for the birds, as is known often to happen, have changed their haunts.

Here we dined at a publick house, I believe the only inn of the island, and having mounted our horses, travelled in the manner already described, till we came to Kingsborough, a place distinguished by that name, because the king lodged here when he landed at Port Re. We were entertained with the usual hospitality by Mr Macdonald and his lady Flora Macdonald, a name that will be mentioned in history, and if courage and fidelity be virtues, mentioned with honour. She is a woman of middle stature, soft features, gentle manners, and elegant presence.

In the morning we sent our horses round a promontory to meet us, and spared ourselves part of the day's fatigue, by crossing an arm of the sea. We had at last some difficulty in coming to Dunvegan; for our way led over an extensive moor, where every step was to be taken with caution, and we were often obliged to alight, because the ground could not be trusted. In travelling this watery flat, I perceived that it had a visible declivity, and might without much expense or difficulty be drained. But difficulty and expense are relative terms, which have different meanings in different places.

To Dunvegan we came, very willing to be at rest, and found our fatigue amply recompensed by our reception. Lady Macleod, who had lived many years in England, was newly come hither with her son and four daughters, who knew all the arts of southern elegance, and all the modes of English economy. Here therefore we settled, and did not spoil the present hour with thoughts of departure.

Dunvegan is a rocky prominence, that juts out into a bay, on the west side of Sky. The house, which is the principal seat of Macleod, is partly old and partly modern; it is built upon the rock, and looks upon the water. It forms two sides of a small square: on the third side is the skeleton of a castle of unknown antiquity, supposed to have been a Norwegian fortress, when the Danes were masters of the islands. It is so nearly entire, that it might have easily been made habitable, were there not an ominous tradition in the family, that the owner shall not long outlive the reparation. The grand-

father of the present laird, in defiance of prediction, began the work, but desisted in a little time, and applied his money to worse uses.

As the inhabitants of the Hebrides lived, for many ages, in continual expectation of hostilities, the chief of every clan resided in a fortress. This house was accessible only from the water, till the last possessor opened an entrance by stairs upon the land.

They had formerly reason to be afraid, not only of declared wars and authorized invaders, or of roving pirates, which, in the northern seas, must have been very common; but of inroads and insults from rival clans, who, in the plenitude of feudal independence, asked no leave of their sovereign to make war on one another. Sky has been ravaged by a feud between the two mighty powers of Macdonald and Macleod. Macdonald having married a Macleod, upon some discontent dismissed her, perhaps because she had brought him no children. Before the reign of James the Fifth, a Highland laird made a trial of his wife for a certain time, and if she did not please him, he was then at liberty to send her away. This however must always have offended, and Macleod resenting the injury, whatever were its circumstances, declared, that the wedding had been solemnized without a bonfire, but that the separation should be better illuminated, and raising a little army, set fire to the territories of Macdonald, who returned the visit, and prevailed.

Another story may show the disorderly state of insular neighbourhood. The inhabitants of the isle of Egg, meeting a boat manned by Macleods, tied

the crew hand and foot, and set them a-drift. Macleod landed upon Egg, and demanded the offenders; but the inhabitants refusing to surrender them, retreated to a cavern, into which they thought their enemies unlikely to follow them. Macleod choked them with smoke, and left them lying dead by families as they stood.

Here the violence of the weather confined us for some time, not at all to our discontent or inconvenience. We would indeed very willingly have visited the islands, which might be seen from the house scattered in the sea, and I was particularly desirous to have viewed Isay; but the storms did not permit us to launch a boat, and we were condemned to listen in idleness to the wind, except when we were better engaged by listening to the ladies.

We had here more wind than waves, and suffered the severity of a tempest, without enjoying its magnificence. The sea being broken by the multitude of islands, does not roar with so much noise, nor beat the storm with such foamy violence, as I have remarked on the coast of Sussex. Though, while I was in the Hebrides, the wind was extremely turbulent, I never saw very high billows.

The country about Dunvegan is rough and barren. There are no trees, except in the orchard, which is a low sheltered spot surrounded with a wall.

When this house was intended to sustain a siege, a well was made in the court, by boring the rock downwards, till water was found, which, though so near to the sea, I have not heard mentioned as brackish, though it has some hardness, or other

qualities, which make it less fit for use; and the family is now better supplied from a stream, which runs by the rock, from two pleasing waterfalls.

Here we saw some traces of former manners, and heard some standing traditions. In the house is kept an ox's horn, hollowed so as to hold perhaps two quarts, which the heir of Macleod was expected to swallow at one draught, as a test of his manhood, before he was permitted to bear arms, or could claim a seat among the men. It is held that the return of the laird to Dunvegan, after any considerable absence, produces a plentiful capture of herrings; and that, if any woman crosses the water to the opposite island, the herrings will desert the coast. Boetius tells the same of some other place. This tradition is not uniform. Some hold that no woman may pass, and others that none may pass but a Macleod.

Among other guests, which the hospitality of Dunvegan brought to the table, a visit was paid by the laird and lady of a small island south of Sky, of which the proper name is Muack, which signifies swine. It is commonly called Muck, which the proprietor not liking, has endeavoured, without effect, to change to Monk. It is usual to call gentlemen in Scotland by the name of their possessions, as Raasay, Bernera, Loch Buy, a practice necessary in countries inhabited by clans, where all that live in the same territory have one name, and must be therefore discriminated by some addition. This gentleman, whose name, I think, is Maclean, should be regularly called Muck, but the appellation, which he thinks too coarse for his island, he would

like still less for himself, and he is therefore addressed by the title of Isle of Muck.

This little island, however it be named, is of considerable value. It is two English miles long, and three quarters of a mile broad, and consequently contains only nine hundred and sixty English acres. It is chiefly arable. Half of this little dominion the laird retains in his own hand, and on the other half, live one hundred and sixty persons, who pay their rent by exported corn. What rent they pay, we were not told, and could not decently inquire. The proportion of the people to the land is such, as the most fertile countries do not commonly maintain.

The laird having all his people under his immediate view, seems to be very attentive to their happiness. The devastation of the small-pox, when it visits places where it comes seldom, is well known. He has disarmed it of its terror at Muack, by inoculating eighty of his people. The expense was two shillings and sixpence a head. Many trades they cannot have among them, but upon occasion, he fetches a smith from the isle of Egg, and has a taylor from the main land, six times a year. This island well deserved to be seen, but the land's absence left us no opportunity.

Every inhabited island has its appendant and subordinate islets. Muck, however small, has yet others smaller about it, one of which has only ground sufficient to afford pasture for three wethers

At Dunvegan I had tasted lotus, and was in danger of forgetting that I was ever to depart, till Mr. Boswell sagely reproached me with my sluggishness and softness. I had no very forcible de-

fence to make, and we agreed to pursue our journey. Macleod accompanied us to Ulinish, where we were entertained by the sheriff of the island.

ULINISH.

Mr. Macqueen travelled with us, and directed our attention to all that was worthy of observation. With him we went to see an ancient building, called a dun or borough. It was a circular inclosure, about forty-two feet in diameter, walled round with loose stones, perhaps to the height of nine feet. The walls are very thick, diminishing a little towards the top, and though in these countries stone is not brought far, must have been raised with much labour. Within the great circle were several smaller rounds of wall, which formed distinct apartments. Its date and its use are unknown. Some suppose it the original seat of the chiefs of the Macleods. Mr Macqueen thought it a Danish fort.

The entrance is covered with flat stones, and is narrow, because it was necessary that the stones which lie over it should reach from one wall to the other, yet, strait as the passage is, they seem heavier than could have been placed where they now lie, by the naked strength of as many men as might stand about them. They were probably raised by putting long pieces of wood under them, to which the action of a long line of lifters might be applied. Savages, in all countries, have patience proportionate to their unskilfulness, and are content to attain their end by very tedious methods.

If it was ever roofed, it might once have been a

dwelling, but as there is no provision for water, it could not have been a fortress. In Sky, as in every other place, there is an ambition of exalting whatever has survived memory to some important use, and referring it to very remote ages. I am inclined to suspect, that in lawless times, when the inhabitants of every mountain stole the cattle of their neighbour, these enclosures were used to secure the herds and flocks in the night. When they were driven within the wall, they might be easily watched, and defended as long as could be needful; for the robbers durst not wait till the injured clan should find them in the morning.

The interior enclosures, if the whole building were once a house, were the chambers of the chief inhabitants. If it was a place of security for cattle, they were probably the shelters of the keepers.

From the Dun we were conducted to another place of security, a cave carried a great way underground, which had been discovered by digging after a fox. These caves, of which many have been found, and many probably remain concealed, are formed, I believe, commonly by taking advantage of a hollow, where banks or rocks rise on either side. If no such place can be found, the ground must be cut away. The walls are made by piling stones against the earth, on either side. It is then roofed by large stones laid across the cavern, which therefore cannot be wide. Over the roof, turfs were placed, and grass was suffered to grow, and the mouth was concealed by bushes, or some other cover.

These caves were represented to us as the cabins

of the first rude inhabitants, of which, however, I am by no means persuaded. This was so low, that no man could stand upright in it. By their construction they are all so narrow, that two can never pass along them together, and being subterraneous, they must be always damp. They are not the work of an age much ruder than the present; for they are formed with as much art as the construction of a common hut requires. I imagine them to have been places only of occasional use, in which the islander, upon a sudden alarm, hid his utensils, or his clothes, and perhaps sometimes his wife and children.

This cave we entered, but could not proceed the whole length, and went away without knowing how far it was carried. For this omission we shall be blamed, as we perhaps have blamed other travellers, but the day was rainy, and the ground was damp. We had with us neither spades nor pick-axes, and if love of ease surmounted our desire of knowledge, the offence has not the invidiousness of singularity.

Edifices, either standing or ruined, are the chief records of an illiterate nation. In some part of this journey, at no great distance from our way, stood a shattered fortress, of which the learned minister, to whose communication we are much indebted, gave us an account.

Those, said he, are the walls of a place of refuge, built in the time of James the Sixth, by Hugh Macdonald, who was next heir to the dignity and fortune of his chief. Hugh, being so near his wish, was impatient of delay; and had art and in-

fluence sufficient to engage several gentlemen in a plot against the laird's life. Something must be stipulated on both sides, for they would not dip their hands in blood merely for Hugh's advancement. The compact was formally written, signed by the conspirators, and placed in the hands of one Macleod.

It happened that Macleod had sold some cattle to a drover, who not having ready money, gave him a bond for payment. The debt was discharged, and the bond re-demanded; which Macleod, who could not read, intending to put into his hands, gave him the conspiracy. The drover, when he had read the paper, delivered it privately to Macdonald, who being thus informed of his danger, called his friends together, and provided for his safety. He made a publick feast, and inviting Hugh Macdonald and his confederates, placed each of them at the table between two men of known fidelity. The compact of conspiracy was then shown, and every man confronted with his own name. Macdonald acted with great moderation. He upbraided Hugh both with disloyalty and ingratitude, but told the rest, that he considered them as men deluded and misinformed. Hugh was sworn to fidelity, and dismissed with his companions; but he was not generous enough to be reclaimed by lenity, and finding no longer any countenance among the gentlemen, endeavoured to execute the same design by meaner hands. In this practice he was detected, taken to Macdonald's castle, and imprisoned in the dungeon. When he was hungry, they let down a plentiful meal of salted meat, and when,

after his repast, he called for drink, conveyed to him a covered cup, which, when he lifted the lid, he found empty. From that time they visited him no more, but left him to perish in solitude and darkness.

We were then told of a cavern by the sea-side, remarkable for the powerful reverberation of sounds. After dinner we took a boat, to explore this curious cavity. The boatmen, who seemed to be of a rank above that of common drudges, inquired who the strangers were, and being told we came one from Scotland, and the other from England, asked if the Englishman could recount a long genealogy. What answer was given them, the conversation being in Erse, I was not much inclined to examine.

They expected no good event of the voyage, for one of them declared that he heard the cry of an English ghost. This omen I was not told till after our return, and therefore cannot claim the dignity of despising it.

The sea was smooth. We never left the shore, and came without any disaster to the cavern, which we found rugged and misshapen, about one hundred and eighty feet long, thirty wide in the broadest part, and in the loftiest, as we guessed, about thirty high. It was now dry, but at high water the sea rises in it near six feet. Here I saw what I had never seen before, limpets and muscles in their natural state. But, as a new testimony to the veracity of common fame, here was no echo to be heard.

We then walked through a natural arch in the rock, which might have pleased us by its novelty, had the stones, which encumbered our feet, given us

leisure to consider it. We were shown the gummy seed of the kelp, that fastens itself to a stone, from which it grows into a strong stalk.

In our return, we found a little boy upon the point of a rock, catching with his angle a supper for the family. We rowed up to him, and borrowed his rod, with which Mr. Boswell caught a cuddy.

The cuddy is a fish of which I know not the philosophical name. It is not much bigger than a gudgeon, but is of great use in these islands, as it affords the lower people both food and oil for their lamps. Cuddies are so abundant, at some times of the year, that they are caught like white bait in the Thames, only by dipping a basket and drawing it back.

If it were always practicable to fish, these islands could never be in much danger from famine, but unhappily, in the winter, when other provision fails, the seas are commonly too rough for nets, or boats.

TALISKER IN SKY

From Ullinish our next stage was to Talisker, the house of colonel Macleod, an officer in the Dutch service, who, in this time of universal peace, has for several years been permitted to be absent from his regiment. Having been bred to physick, he is consequently a scholar, and his lady, by accompanying him in his different places of residence, is become skilful in several languages. Talisker is the place beyond all that I have seen, from which the gay and the jovial seem utterly excluded, and where the hermit might expect to grow old in meditation,

find us a convenient passage. From this time was formed an acquaintance, which being begun by kindness, was accidentally continued by constraint, we derived much pleasure from it, and I hope have given him no reason to repent it.

The weather was now almost one continued storm, and we were to snatch some happy intermission to be conveyed to Mull, the third island of the Hebrides, lying about a degree south of Sky, whence we might easily find our way to Inch Kenneth, where Sir Allan Maclean resided, and afterward to Jona

For this purpose, the most commodious station that we could take was Armidel, which Sir Alexander Macdonald had now left to a gentleman who lived there as his factor or steward.

In our way to Armidel was Coriatachan, where we had already been, and to which therefore we were very willing to return. We staid, however, so long at Talisker, that a great part of our journey was performed in the gloom of the evening. In travelling even thus almost without light through naked solitude, when there is a guide whose conduct may be trusted, a mind not naturally too much disposed to fear, may preserve some degree of cheerfulness, but what must be the solicitude of him who should be wandering, among the crags and hollows, benighted, ignorant, and alone?

The fictions of the Gothick romances were not so remote from credibility as they are now thought. In the full prevalence of the feudal institution, when violence desolated the world, and every baron lived in a fortress, forests and castles were regularly succeeded by each other, and the adventurer might

very suddenly pass from the gloom of woods, or the ruggedness of moors, to seats of plenty, gaiety, and magnificence. Whatever is imaged in the wildest tale, if giants, dragons, and enchantment be excepted, would be felt by him, who, wandering in the mountains without a guide, or upon the sea without a pilot, should be carried amidst his terror and uncertainty, to the hospitality and elegance of Raasay or Dunvegan.

To Coriatachan at last we came, and found ourselves welcomed as before. Here we staid two days, and made such inquiries as curiosity suggested. The house was filled with company, among whom Mr Macpherson and his sister distinguished themselves by their politeness and accomplishments. By him we were invited to Ostig, a house not far from Armidel, where we might easily hear of a boat, when the weather would suffer us to leave the island.

OSTIG IN SKY

At Ostig, of which Mr Macpherson is minister, we were entertained for some days, then removed to Armidel, where we finished our observations on the island of Sky.

As this island lies in the fifty-seventh degree, the air cannot be supposed to have much warmth. The long continuance of the sun above the horizon does indeed sometimes produce great heat in northern latitudes; but this can only happen in sheltered places, where the atmosphere is to a certain degree stagnant, and the same mass of air continues to receive for many hours the rays of the sun, and the vapours of the earth. Sky lies open on the west

and north to a vast extent of ocean, and is cooled in the summer by a perpetual ventilation, but by the same blasts is kept warm in winter. Their weather is not pleasing. Half the year is deluged with rain. From the autumnal to the vernal equinox, a dry day is hardly known, except when the showers are suspended by a tempest. Under such skies can be expected no great exuberance of vegetation. Their winter overtakes their summer, and their harvest lies upon the ground drenched with rain. The autumn struggles hard to produce some of our early fruits. I gathered gooseberries in September; but they were small, and the husk was thick.

The winter is seldom such as puts a full stop to the growth of plants, or reduces the cattle to live wholly on the surplusage of the summer. In the year seventy-one they had a severe season, remembered by the name of the Black Spring, from which the island has not yet recovered. The snow lay long upon the ground, a calamity hardly known before. Part of their cattle died for want, part were unseasonably sold to buy sustenance for the owners, and, what I have not read or heard of before, the kine that survived were so emaciated and dispirited, that they did not require the mangle at the usual time. Many of the roe-bucks perished.

The soil, as in other countries, has its diversities. In some parts there is only a thin layer of earth spread upon a rock, which bears nothing but short brown heath, and perhaps is not generally capable of any better product. There are many bogs or mosses of greater or less extent, where the soil cannot be supposed to want depth, though it is too wet for the

plough But we did not observe in these any aquatick plants The valleys and the mountains are alike darkened with heath. Some grass, however, grows here and there, and some happier spots of earth are capable of tillage

Their agriculture is laborious, and perhaps rather feeble than unskilful Their chief manure is seaweed, which, when they lay it to rot upon the field, gives them a better crop than those of the Highlands They heap sea-shells upon the dunghill, which in time moulder into a fertilising substance When they find a vein of earth where they cannot use it, they dig it up, and add it to the mould of a more commodious place

Their corn grounds often lie in such intricacies among the crags, that there is no room for the action of a team and plough The soil is then turned up by manual labour, with an instrument called a crooked spade, of a form and weight which to me appeared very inconvenient, and would perhaps be soon improved in a country where workmen could be easily found and easily paid It has a narrow blade of iron fixed to a long and heavy piece of wood, which must have, about a foot and a half above the iron, a knee or flexure with the angle downwards When the farmer encounters a stone, which is the great impediment of his operations, he drives the blade under it, and bringing the knee or angle to the ground, has in the long handle a very forcible lever

According to the different mode of tillage, farms are distinguished into *long land* and *short land* Long

land is that which affords room for a plough, and short land is turned up by the spade.

The grain which they commit to the furrows thus tediously formed, is either oats or barley. They do not sow barley without very copious manure, and then they expect from it ten for one, an increase equal to that of better countries; but the culture is so operose that they content themselves commonly with oats; and who can relate without compassion, that after all their diligence they are to expect only a triple increase? It is in vain to hope for plenty, when a third part of the harvest must be reserved for seed.

When their grain is arrived at the state which they must consider as ripeness, they do not cut, but pull the barley to the oats they apply the sickle. Wheel carriages they have none, but make a frame of timber, which is drawn by one horse with the two points behind pressing on the ground. On this they sometimes drag home their sheaves, but often convey them home in a kind of open panier, or frame of sticks upon the horse's back.

Of that which is obtained with so much difficulty, nothing surely ought to be wasted, yet their method of clearing their oats from the husk is by parching them in the straw. Thus, with the genuine improvidence of savages, they destroy that fodder for want of which their cattle may perish. From this practice they have two petty conveniencies. They dry the grain so that it is easily reduced to meal, and they escape the theft of the thresher. The taste contracted from the fire by the oats, as by every other scorched substance, use must long ago have made

grateful The oats that are not parched must be dried in a kiln

The barns of Sky I never saw That which Macleod of Raasay had erected near his house was so contrived, because the harvest is seldom brought home dry, as by perpetual perfilation to prevent the mow from heating

Of their gardens I can judge only from their tables I did not observe that the common greens were wanting, and suppose, that by choosing an advantageous exposition, they can raise all the more hardy esculent plants Of vegetable fragrance or beauty they are not yet studious Few vows are made to Flora in the Hebrides.

They gather a little hay, but the grass is mown late; and is so often almost dry and again very wet, before it is housed, that it becomes a collection of withered stalks without taste or fragrance, it must be eaten by cattle that have nothing else, but by most English farmers would be thrown away

In the islands I have not heard that any subterraneous treasures have been discovered, though where there are mountains, there are commonly minerals. One of the rocks in Col has a black vein, imagined to consist of the ore of lead, but it was never yet opened or essayed In Sky a black mass was accidentally picked up, and brought into the house of the owner of the land, who found himself strongly inclined to think it a coal, but unhappily it did not burn in the chimney Common ores would be here of no great value; for what requires to be separated by fire, must, if it were found, be carried away in its

mineral state, here being no fuel for the smelting-house or forge. Perhaps by diligent search in this world of stone, some valuable species of marble might be discovered. But neither philosophical curiosity, nor commercial industry, have yet fixed their abode here, where the importunity of immediate want, supplied but for the day, and craving on the morrow, has left little room for exclusive knowledge, or the pleasing fancies of distant profit.

They have lately found a manufacture considerably lucrative. Their rocks abound with kelp, a sea-plant, of which the ashes are melted into glass. They burn kelp in great quantities, and then send it away in ships, which come regularly to purchase them. This new source of riches has raised the rents of many maritime farms, but the tenants pay, like all other tenants, the additional rent with great unwillingness, because they consider the profits of the kelp as the mere product of personal labour, to which the landlord contributes nothing. However, as any man may be said to give when he gives the power of gaining, he has certainly as much right to profit from the price of kelp as of any thing else found or raised upon his ground.

This new trade has excited a long and eager litigation between Macdonald and Macleod, for a ledge of rocks, which, till the value of kelp was known, neither of them desired the reputation of possessing.

The cattle of Sky are not so small as is commonly believed. Since they have sent their bees in great numbers to southern marts, they have pro-

bably taken more care of their breed. At stated times the annual growth of cattle is driven to a fair, by a general drover, and with the money, which he returns to the farmer, the rents are paid

The price regularly expected is from two to three pounds a head: there was once one sold for five pounds. They go from the islands very lean, and are not offered to the butcher till they have been long fatted in English pastures.

Of their black cattle some are without horns, called by the Scots *humble* cows, as we call a bee an *humble* bee, that wants a sting. Whether this difference be specifick, or accidental, though we inquired with great diligence, we could not be informed. We are not very sure that the bull is ever without horns, though we have been told that such bulls there are. What is produced by putting a hoined and unhorned male and female together, no man has ever tried that thought the result worthy of observation.

Their horses are, like their cows, of a moderate size. I had no difficulty to mount myself commodiously by the favour of the gentlemen. I heard of very little cows in Barra, and very little horses in Rum, where perhaps no care is taken to prevent that diminution of size, which must always happen, where the greater and the less copulate promiscuously, and the young animal is restrained from growth by penury of sustenance.

The goat is the general inhabitant of the earth, complying with every difference of climate and of soil. The goats of the Hebrides are like others, nor did I hear any thing of their sheep to be particularly remarked.

In the penury of these malignant regions, nothing is left that can be converted to food. The goats and the sheep are milked like the cows. A single meal of a goat is a quart, and of a sheep a pint. Such at least was the account which I could extract from those of whom I am not sure that they ever had inquired.

The milk of goats is much thinner than that of cows, and that of sheep is much thicker. Sheep's milk is never eaten before it is boiled; as it is thick, it must be very liberal of curd; and the people of St. Kilda form it into small cheeses.

The stags of the mountains are less than those of our parks or forests, perhaps not bigger than our fallow deer. Their flesh has no rankness, nor is inferior in flavour to our common venison. The roebuck I neither saw nor tasted. These are not countries for a regular chase. The deer are not driven with horns and hounds. A sportsman, with his gun in his hand, watches the animal, and when he has wounded him, traces him by the blood.

They have a race of brindled greyhounds larger and stronger than those with which we course hares, and those are the only dogs used by them for the chase.

Man is by the use of fire-arms made so much an overmatch for other animals, that in all countries, where they are in use, the wild part of the creation sensibly diminishes. There will probably not be long either stags or roebucks in the islands. All the beasts of chase would have been lost long ago in countries well inhabited, had they not been preserved by laws for the pleasure of the rich.

There are in Sky neither rats nor mice, but the weasel is so frequent, that he is heard in houses rattling behind chests or beds, as rats in England. They probably owe to his predominance that they have no other vermin, for since the great rat took possession of this part of the world, scarce a ship can touch at any port, but some of his race are left behind. They have within these few years began to infest the isle of Col, where being left by some trading vessel, they have increased for want of weasels to oppose them.

The inhabitants of Sky, and of the other islands, which I have seen, are commonly of the middle stature, with fewer among them very tall or very short, than are seen in England, or perhaps, as their numbers are small, the chances of any deviation from the common measure are necessarily few. The tallest men that I saw are among those of higher rank. In regions of barrenness and scarcity, the human race is hindered in its growth by the same causes as other animals.

The ladies have as much beauty here as in other places, but bloom and softness are not to be expected among the lower classes, whose faces are exposed to the rudeness of the climate, and whose features are sometimes contracted by want, and sometimes hardened by the blasts. Supreme beauty is seldom found in cottages or workshops, even where no real hardships are suffered. To expand the human face to its full perfection, it seems necessary that the mind should co-operate by placidness of content, or consciousness of superiority.

Then strength is proportionate to their size, but they are accustomed to run upon rough ground, and therefore can with great agility skip over the bog, or clamber the mountain. For a campaign in the wastes of America, soldiers better qualified could not have been found. Having little work to do, they are not willing, nor perhaps able, to endure a long continuance of manual labour, and are therefore considered as habitually idle.

Having never been supplied with those accommodations, which life extensively diversified with trades affords, they supply their wants by very insufficient shifts, and endure many inconveniences, which a little attention would easily relieve. I have seen a horse carrying home the harvest on a crate. Under his tail was a stick for a crupper, held at the two ends by twists of straw. Hemp will grow in their islands, and therefore ropes may be had. If they wanted hemp, they might make better cordage of rushes, or perhaps of nettles, than of straw.

Their method of life neither secures them perpetual health, nor exposes them to any particular diseases. There are physicians in the islands, who, I believe, all practise chirurgery, and all compound their own medicines.

It is generally supposed, that life is longer in places where there are few opportunities of luxury, but I found no instance here of extraordinary longevity. A cottager grows old over his oaten cakes, like a citizen at a turtle feast. He is indeed seldom incommoded by corpulence. Poverty preserves him from sinking under the burden of himself, but

he escapes no other injury of time. Instances of long life are often related, which those who hear them are more willing to credit than examine. To be told that any man has attained a hundred years, gives hope and comfort to him who stands trembling on the brink of his own climacterick

Length of life is distributed 'impartially to very different modes of life in very different climates; and the mountains have no greater examples of age and health than the low lands, where I was introduced to two ladies of high quality, one of whom, in her ninety-fourth year, presided at her table with the full exercise of all her powers; and the other has attained her eighty-fourth, without any diminution of her vivacity, and with little reason to accuse time of depredations on her beauty.

In the islands, as in most other places, the inhabitants are of different rank, and one does not encroach here upon another. Where there is no commerce nor manufacture, he that is born poor can scarcely become rich, and if none are able to buy estates, he that is born to land cannot annihilate his family by selling it. This was once the state of these countries. Perhaps there is no example, till within a century and a half, of any family whose estate was alienated otherwise than by violence or forfeiture. Since money has been brought amongst them, they have found, like others, the art of spending more than they receive, and I saw with grief the chief of a very ancient clan, whose island was condemned by law to be sold for the satisfaction of his creditors

The name of highest dignity is Laird, of which there are in the extensive isle of Sky only three, Macdonald, Macleod, and Mackinnon. The laird is the original owner of the land, whose natural power must be very great, where no man lives but by agriculture; and where the produce of the land is not conveyed through the labyrinths of traffick, but passes directly from the hand that gathers it to the mouth that eats it. The laird has all those in his power that live upon his farms. Kings can, for the most part, only exalt or degrade. The laird at pleasure can feed or starve, can give bread, or withhold it. This inherent power was yet strengthened by the kindness of consanguinity, and the reverence of patriarchal authority. The laird was the father of the clan, and his tenants commonly bore his name. And to these principles of original command was added, for many ages, an exclusive right of legal jurisdiction.

This multifarious and extensive obligation operated with force scarcely credible. Every duty, moral or political, was absorbed in affection and adherence to the chief. Not many years have passed since the clans knew no law but the laird's will. He told them to whom they should be friends or enemies, what king they should obey, and what religion they should profess.

When the Scots first rose in arms against the succession of the house of Hanover, Lovat, the chief of the Frasers, was in exile for a rape. The Frasers were very numerous, and very zealous against the government. A pardon was sent to Lovat. He

came to the English camp, and the clan immediately deserted to him.

Next in dignity to the land is the Tacksman; a large taker or lease-holder of land, of which he keeps part as a domain in his own hand, and lets part to under-tenants. The tacksman is necessarily a man capable of securing to the laird the whole rent, and is commonly a collateral relation. These tacks, or subordinate possessions, were long considered as hereditary, and the occupant was distinguished by the name of the place at which he resided. He held a middle station, by which the highest and the lowest orders were connected. He paid rent and reverence to the laird, and received them from the tenants. This tenure still subsists, with its original operation, but not with the primitive stability. Since the islanders, no longer content to live, have learned the desire of growing rich, an ancient dependent is in danger of giving way to a higher bidder, at the expense of domestick dignity and hereditary power. The stranger, whose money buys him preference, considers himself as paying for all that he has, and is indifferent about the laird's honour or safety. The commodiousness of money is indeed great; but there are some advantages which money cannot buy, and which therefore no wise man will by the love of money be tempted to forego.

I have found in the hither parts of Scotland, men not defective in judgment or general experience, who consider the tacksman as a useless burden of the ground, as a drone who lives upon the product of an estate, without the right of property, or the

then profit to nothing, by underselling one another; and as no great stock could have been in any hand, no sudden demand of large quantities could have been answered, and the builder must have stood still till the nailer could supply him

According to these schemes, universal plenty is to begin and end in universal misery. Hope and emulation will be utterly extinguished, and as all must obey the call of immediate necessity, nothing that requires extensive views, or provides for distant consequences, will ever be performed

To the southern inhabitants of Scotland, the state of the mountains and the islands is equally unknown with that of Borneo or Sumatra. of both they have only heard a little, and guess the rest. They are strangers to the language and the manners, to the advantages and wants of the people, whose life they would model, and whose evils they would remedy.

Nothing is less difficult than to procure one convenience by the forfeiture of another. A soldier may expedite his march by throwing away his arms. To banish the tacksman is easy, to make a country plentiful by diminishing the people, is an expeditious mode of husbandry, but that abundance, which there is nobody to enjoy, contributes little to human happiness.

As the mind must govern the hands, so in every society the man of intelligence must direct the man of labour. If the tacksmen be taken away, the Hebrides must in their present state be given up to grossness and ignorance, the tenant, for want of instruction, will be unskilful, and for want of admonition, will be negligent. The laird, in these

wide estates, which often consist of islands remote from one another, cannot extend his personal influence to all his tenants, and the steward having no dignity annexed to his character, can have little authority among men taught to pay reverence only to birth, and who regard the tacksman as their hereditary superior, nor can the steward have equal zeal for the prosperity of an estate profitable only to the laird, with the tacksman, who has the laird's income involved in his own

The only gentlemen in the islands are the lairds, the tacksmen, and the ministers, who frequently improve their livings by becoming farmers. If the tacksmen be banished, who will be left to impart knowledge, or impress civility? The laird must always be at a distance from the greater part of his lands, and if he resides at all upon them, must drag his days in solitude, having no longer either a friend or a companion; he will therefore depart to some more comfortable residence, and leave the tenants to the wisdom and mercy of a factor

Of tenants there are different orders, as they have greater or less stock. Land is sometimes leased to a small fellowship, who live in a cluster of huts, called a Tenant's Town, and are bound jointly and separately for the payment of their rent. These, I believe, employ in the care of their cattle and the labour of tillage, a kind of tenants yet lower, who having a hut, with grass for a certain number of cows and sheep, pay their rent by a stipulated quantity of labour.

The condition of domestick servants, or the price of occasional labour, I do not know with certainty

I was told that the maids have sheep, and are allowed to spin for their own clothing; perhaps they have no pecuniary wages, or none but in very wealthy families. The state of life, which has hitherto been purely pastoral, begins now to be a little variegated with commerce; but novelties enter by degrees, and till one mode has fully prevailed over the other, no settled notion can be formed.

Such is the system of insular subordination, which, having little variety, cannot afford much delight in the view, nor long detain the mind in contemplation. The inhabitants were for a long time perhaps not unhappy; but their content was a muddy mixture of pride and ignorance, an indifference for pleasures which they did not know, a blind veneration for their chiefs, and a strong conviction of their own importance.

Their pride has been crushed by the heavy hand of a vindictive conqueror, whose severities have been followed by laws, which, though they cannot be called cruel, have produced much discontent, because they operate upon the surface of life, and make every eye bear witness to subjection. To be compelled to a new dress has always been found painful.

Their chiefs being now deprived of their jurisdiction, have already lost much of their influence; and as they gradually degenerate from patriarchal rulers to rapacious landlords, they will divest themselves of the little that remains.

That dignity which they derived from an opinion of their military importance, the law, which disarmed them, has abated. An old gentleman, de-

lighting himself with the recollection of better days, related, that forty years ago, a chieftain walked out attended by ten or twelve followers, with their arms rattling. That animating rabble has now ceased. The chief has lost his formidable retinue, and the Highlander walks his heath unarmed and defenceless, with the peaceable submission of a French peasant, or English cottager.

Their ignorance grows every day less, but their knowledge is yet of little other use than to show them their wants. They are now in the period of education, and feel the uneasiness of discipline, without yet perceiving the benefit of instruction.

The last law, by which the Highlanders are deprived of their arms, has operated with efficacy beyond expectation. Of former statutes made with the same design, the execution had been feeble, and the effect inconsiderable. Concealment was undoubtedly practised, and perhaps often with connivance. There was tenderness or partiality on one side, and obstinacy on the other. But the law, which followed the victory of Culloden, found the whole nation dejected and intimidated, informations were given without danger and without fear, and the arms were collected with such rigour, that every house was despoiled of its defence.

To disarm part of the Highlands, could give no reasonable occasion of complaint. Every government must be allowed the power of taking away the weapon that is lifted against it. But the loyal clans murmured, with some appearance of justice, that, after having defended the king, they were forbidden for the future to defend themselves, and

that the sword should be forfeited, which had been legally employed. Then case is undoubtedly hard, but in political regulations, good cannot be complete, it can only be predominant.

Whether by disarming a people thus broken into several tribes, and thus remote from the seat of power, more good than evil has been produced, may deserve inquiry. The supreme power in every community has the right of debarring every individual, and every subordinate society, from self-defence, only because the supreme power is able to defend them, and therefore where the government cannot act, he must trust the subject to act for himself. These islands might be wasted with fire and sword before their sovereign would know their distress. A gang of robbers, such as has been lately found confederating themselves in the Highlands, might lay a wide region under contribution. The crew of a petty privateer might land on the largest and most wealthy of the islands, and riot without control in cruelty and waste. It was observed by one of the chiefs of Sky, that fifty armed men might, without resistance, ravage the country. Laws that place the subjects in such a state, contravene the first principles of the compact of authority: they exact obedience, and yield no protection.

It affords a generous and manly pleasure to conceive a little nation gathering its fruits and tending its herds with fearless confidence, though it lies open on every side to invasion, where, in contempt of walls and trenches, every man sleeps securely with his sword beside him, where all on the first approach of hostility came together at the call to

battle, as at a summons to a festal show; and committing their cattle to the care of those whom age or nature has disabled, engage the enemy with that competition for hazard and for glory, which operate in men that fight under the eye of those, whose dislike or kindness they have always considered as the greatest evil or the greatest good

This was, in the beginning of the present century, the state of the Highlands. Every man was a soldier, who partook of national confidence, and interested himself in national honour. To lose this spirit, is to lose what no small advantage will compensate

It may likewise deserve to be inquired, whether a great nation ought to be totally commercial? whether amidst the uncertainty of human affairs, too much attention to one mode of happiness may not endanger others? whether the pride of riches must not sometimes have recourse to the protection of courage? and whether, if it be necessary to preserve in some part of the empire the military spirit, it can subsist more commodiously in any place, than in remote and unprofitable provinces, where it can commonly do little harm, and whence it may be called forth at any sudden exigence?

It must however be confessed, that a man, who places honour only in successful violence, is a very troublesome and pernicious animal in time of peace, and that the martial character cannot prevail in a whole people, but by the diminution of all other virtues. He that is accustomed to resolve all right into conquest, will have very little tenderness or equity. All the friendship in such a life can be only a con-

federacy of invasion, or alliance of defence. The strong must flourish by force, and the weak subsist by stratagem

Till the Highlanders lost their ferocity with their arms, they suffered from each other all that malignity could dictate, or precipitance could act. Every provocation was revenged with blood, and no man that ventured into a numerous company, by whatever occasion brought together, was sure of returning without a wound. If they are now exposed to foreign hostilities, they may talk of the danger, but can seldom feel it. If they are no longer martial, they are no longer quarrelsome. Misery is caused for the most part, not by a heavy crush of disaster, but by the corrosion of less visible evils, which canker enjoyment, and undermine security. The visit of an invader is necessarily rare, but domestick animosities allow no cessation

The abolition of the local jurisdictions, which had for so many ages been exercised by the chiefs, has likewise its evil and its good. The feudal constitution naturally diffused itself into long ramifications of subordinate authority. To this general temper of the government was added the peculiar form of the country, broken by mountains into many subdivisions scarcely accessible but to the natives, and guarded by passes, or perplexed with intricacies, through which national justice could not find its way

The power of deciding controversies, and of punishing offences, as some such power there must always be, was entrusted to the lairds of the country, to those whom the people considered as their na-

tural judges It cannot be supposed that a rugged proprietor of the rocks, unprincipled and unenlightened, was a nice resolver of entangled claims, or very exact in proportioning punishment to offences But the more he indulged his own will, the more he held his vassals in dependance. Prudence and innocence, without the favour of the chief, conferred no security; and crimes involved no danger, when the judge was resolute to acquit

When the chiefs were men of knowledge and virtue, the convenience of a domestick judicature was great No long journeys were necessary, nor artificial delays could be practised, the character, the alliances, and interests of the litigants were known to the court, and all false pretences were easily detected The sentence, when it was past, could not be evaded, the power of the laird superseded formalities, and justice could not be defeated by interest or stratagem.

I doubt not but that since the regular judges have made then circuits through the whole country, right has been every where more wisely and more equally distributed, the complaint is, that litigation is grown troublesome, and that the magistrates are too few, and therefore often too remote for general convenience

Many of the smaller islands have no legal officer within them I once asked, if a crime should be committed, by what authority the offender could be seized? and was told, that the laird would exert his right, a right which he must now usurp, but which surely necessity must vindicate, and which is therefore yet exercised in lower degrees, by some

of the proprietors, when legal processes cannot be obtained

In all greater questions, however, there is now happily an end to all fear or hope from malice or from favour. The roads are secure in those places through which, forty years ago, no traveller could pass without a convoy. All trials of right by the sword are forgotten, and the mean are in as little danger from the powerful as in other places. No scheme of policy has, in any country, yet brought the rich and poor on equal terms into courts of judicature. Perhaps experience, improving on experience, may in time effect it

Those who have long enjoyed dignity and power ought not to lose it without some equivalent. There was paid to the chiefs by the publick, in exchange for their privileges, perhaps a sum greater than most of them had ever possessed, which excited a thirst for riches, of which it showed them the use. When the power of birth and station ceases, no hope remains but from the prevalence of money. Power and wealth supply the place of each other. Power confers the ability of gratifying our desire without the consent of others. Wealth enables us to obtain the consent of others to our gratification. Power, simply considered, whatever it confers on one, must take from another. Wealth enables its owner to give to others, by taking only from himself. Power pleases the violent and proud. wealth delights the placid and the timorous. Youth therefore flies at power, and age grovels after riches

The chiefs, divested of their prerogatives, neces-

sarily turned their thoughts to the improvement of their revenues, and expect more rent, as they have less homage. The tenant, who is far from perceiving that his condition is made better in the same proportion as that of his landlord is made worse, does not immediately see why his industry is to be taxed more heavily than before. He refuses to pay the demand, and is ejected, the ground is then let to a stranger, who perhaps brings a larger stock, but who, taking the land at its full price, treats with the laird upon equal terms, and considers him not as a chief but as a trafficker in land. Thus the estate perhaps is improved, but the clan is broken.

It seems to be the general opinion, that the rents have been raised with too much eagerness. Some regard must be paid to prejudice. Those who have hitherto paid but little, will not suddenly be persuaded to pay much, though they can afford it. As ground is gradually improved, and the value of money decreases, the rent may be raised without any diminution of the farmer's profits; yet it is necessary in these countries, where the ejection of a tenant is a greater evil than in more populous places, to consider not merely what the land will produce, but with what ability the inhabitant can cultivate it. A certain stock can allow but a certain payment, for if the land be doubled, and the stock remains the same, the tenant becomes no richer. The proprietors of the Highlands might perhaps often increase their income, by subdividing the farms, and allotting to every occupier only so

many acres as he can profitably employ, but that they want people.

There seems now, whatever be the cause, to be through a great part of the Highlands a general discontent. That adherence, which was lately professed by every man to the chief of his name, has now little prevalence, and he that cannot live as he desires at home, listens to the tale of fortunate islands, and happy regions, where every man may have land of his own, and eat the product of his labour without a superiour

Those who have obtained grants of American lands have, as is well known, invited settlers from all quarters of the globe, and among other places, where oppression might produce a wish for new habitations, their emissaries would not fail to try their persuasions in the isles of Scotland, where at the time when the clans were newly disunited from their chiefs, and exasperated by unprecedented exactions, it is no wonder that they prevailed

Whether the mischiefs of emigration were immediately perceived may be justly questioned. They who went first were probably such as could best be spared, but the accounts sent by the earliest adventurers, whether true or false, inclined many to follow them; and whole neighbourhoods formed parties for removal, so that departure from their native country is no longer exile. He that goes thus accompanied, carries with him all that makes life pleasant. He sits down in a better climate, surrounded by his kindred and his friends. They carry with them their language, their opinions, their popular songs, and hereditary merriment. They

change nothing but the place of their abode; and of that change they perceive the benefit

This is the real effect of emigration, if those that go away together settle on the same spot, and preserve their ancient union. But some relate that these adventurous visitants of unknown regions, after a voyage passed in dreams of plenty and felicity, are dispersed at last upon a sylvan wilderness, where their first years must be spent in toil, to clear the ground which is afterwards to be tilled, and that the whole effect of their undertaking is only more fatigue and equal scarcity.

Both accounts may be suspected. Those who are gone will endeavour by every art to draw others after them, for as their numbers are greater, they will provide better for themselves. When Nova Scotia was first peopled, I remember a letter, published under the character of a New Planter, who related how much the climate put him in mind of Italy. Such intelligence the Hebridiens probably receive from their transmarine correspondents. But with equal temptations of interest, and perhaps with no greater niceness of veracity, the owners of the islands spread stories of American hardships to keep their people content at home.

Some method to stop this epidemick desire of wandering, which spreads its contagion from valley to valley, deserves to be sought with great diligence. In more fruitful countries, the removal of one, only makes room for the succession of another but in the Hebrides, the loss of an inhabitant leaves a lasting vacuity, for nobody born in any other parts of the world will choose this country for his re-

sidence ; and an island once depopulated will remain a desert, as long as the present facility of travel gives every one, who is discontented and unsettled, the choice of his abode

Let it be inquired, whether the first intention of those who are fluttering on the wing, and collecting a flock that they may take their flight, be to attain good or to avoid evil. If they are dissatisfied with that part of the globe, which their birth has allotted them, and resolve not to live without the pleasures of happier climates, if they long for bright suns, and calm skies, and flowery fields, and fragrant gardens, I know not by what eloquence they can be persuaded, or by what offers they can be hired to stay.

But if they are driven from their native country by positive evils, and disgusted by ill treatment, real or imaginary, it were fit to remove their grievances, and quiet their resentment; since, if they have been hitherto undutiful subjects, they will not much mend their principles by American conversation

To allure them into the army it was thought proper to indulge them in the continuance of their national dress. If this concession could have any effect, it might easily be made. That dissimilitude of appearance, which was supposed to keep them distinct from the rest of the nation, might disincline them from coalescing with the Pennsylvanians or people of Connecticut. If the restitution of their arms will reconcile them to their country, let them have again those weapons, which will not be more mischievous at home than in the colonies. That

they may not fly from the increase of rent, I know not whether the general good does not require that the landlords be, for a time, restrained in their demands, and kept quiet by pensions proportionate to their loss

To hinder insurrection by driving away the people, and to govern peaceably, by having no subjects, is an expedient that argues no great profundity of politicks. To soften the obdurate, to convince the mistaken, to mollify the resentful, are worthy of a statesman ; but it affords a legislator little self-applause to consider, that where there was formerly an insurrection, there is now a wilderness.

It has been a question often agitated without solution, why those northern regions are now so thinly peopled, which formerly overwhelmed with their armies the Roman empire. The question supposes what I believe is not true, that they had once more inhabitants than they could maintain, and overflowed only because they were full

This is to estimate the manners of all countries and ages by our own. Migration, while the state of life was unsettled, and there was little communication of intelligence between distant places, was among the wilder nations of Europe capricious and casual. An adventurous projector heard of a fertile coast unoccupied, and led out a colony ; a chief of renown for bravery, called the young men together, and led them out to try what fortune would present. When Cæsar was in Gaul, he found the Helvetians preparing to go they knew not whither, and put a stop to their motions. They settled again in their

own country, where they were so far from wanting room, that they had accumulated three years provision for their march

The religion of the north was military; if they could not find enemies, it was their duty to make them: they travelled in quest of danger, and willingly took the chance of empire or death. If their troops were numerous, the countries from which they were collected are of vast extent, and without much exuberance of people great armies may be raised where every man is a soldier. But their true numbers were never known. Those who were conquered by them are their historians, and shame may have excited them to say, that they were overwhelmed with multitudes. To count is a modern practice, the ancient method was to guess; and when numbers are guessed, they are always magnified.

Thus England has for several years been filled with the achievements of seventy thousand Highlanders employed in America. I have heard from an English officer, not much inclined to favour them, that their behaviour deserved a very high degree of military praise; but their number has been much exaggerated. One of the ministers told me, that seventy thousand men could not have been found in all the Highlands, and that more than twelve thousand never took the field. Those that went to the American war, went to destruction. Of the old Highland regiment, consisting of twelve hundred, only seventy-six survived to see their country again.

The Gothick swarms have at least been multiplied with equal liberality. That they bore no great proportion to the inhabitants, in whose cou . .

settled, is plain from the paucity of northern words now found in the provincial languages. Their country was not deserted for want of room, because it was covered with forests of vast extent, and the first effect of plenitude of inhabitants is the destruction of wood. As the Europeans spread over America the lands are gradually laid naked.

I would not be understood to say, that necessity had never any part in their expeditions. A nation, whose agriculture is scanty or unskilful, may be driven out by famine. A nation of hunters may have exhausted their game. I only affirm that the northern regions were not, when their irruptions subdued the Romans, overpeopled with regard to their real extent of territory, and power of fertility. In a country fully inhabited, however afterward laid waste, evident marks will remain of its former populousness. But of Scandinavia and Germany, nothing is known but that as we trace their state upwards into antiquity, their woods were greater, and their cultivated ground was less.

That causes very different from want of room may produce a general disposition to seek another country, is apparent from the present conduct of the Highlanders, who are in some places ready to threaten a total secession. The numbers which have already gone, though like other numbers they may be magnified, are very great, and such as if they had gone together, and agreed upon any certain settlement, might have founded an independent government in the depths of the western continent. Nor are they only the lowest and most indigent, many men of considerable wealth have taken with them their train

of labourers and dependants, and if they continue the feudal scheme of polity, may establish new clans in the other hemisphere

That the immediate motives of their desertion must be imputed to their landlords, may be reasonably concluded, because some lairds of more prudence and less rapacity have kept their vassals undiminished. From Raasay only one man had been seduced, and at Col there was no wish to go away.

The traveller who comes hither from more opulent countries, to speculate upon the remains of pastoral life, will not much wonder that a common Highlander has no strong adherence to his native soil, for of animal enjoyments, or of physical good, he leaves nothing that he may not find again where-soever he may be thrown

The habitations of men in the Hebrides may be distinguished into huts and houses. By a house, I mean a building with one story over another, by a hut, a dwelling with only one floor. The land, who formerly lived in a castle, now lives in a house; sometimes sufficiently neat, but seldom very spacious or splendid. The tacksmen and the ministers have commonly houses. Wherever there is a house, the stranger finds a welcome, and to the other evils of exterminating tacksmen may be added the unavoidable cessation of hospitality, or the devolution of too heavy a burden on the ministers

Of the houses little can be said. They are small, and by the necessity of accumulating stores, where there are so few opportunities of purchase, the rooms are very heterogeneously filled. With want of cleanliness it were ingratitude to reproach them. The

servants having been bred upon the naked earth, think every floor clean, and the quick succession of guests, perhaps not always over-elegant, does not allow much time for adjusting their apartments.

Huts are of many gradations, from murky dens, to commodious dwellings

The wall of a common hut is always built without mortar, by a skilful adaptation of loose stones. Sometimes perhaps a double wall of stones is raised, and the intermediate space filled with earth. The air is thus completely excluded. Some walls are, I think, formed of turfs, held together by a wattle, or texture of twigs. Of the meanest huts, the first room is lighted by the entrance, and the second by the smoke-hole. The fire is usually made in the middle. But there are huts, or dwellings, of only one story, inhabited by gentlemen, which have walls cemented with mortar, glass windows, and boarded floors. Of these all have chimneys, and some chimneys have grates.

The house and the furniture are not always nicely suited. We were driven once, by missing a passage, to the hut of a gentleman, where, after a very liberal supper, when I was conducted to my chamber, I found an elegant bed of Indian cotton, spread with fine sheets. The accommodation was flattering, I undressed myself, and felt my feet in the mire. The bed stood upon the bare earth, which a long course of rain had softened to a puddle.

In pastoral countries the condition of the lowest rank of people is sufficiently wretched. Among manufacturers, men that have no property may have art and industry, which make them necessary,

and therefore valuable. But where flocks and corn are the only wealth, there are always more hands than work, and of that work there is little in which skill and dexterity can be much distinguished. He therefore who is born poor never can be rich. The son merely occupies the place of the father, and he knows nothing of progression or advancement.

The petty tenants, and labouring peasants, live in miserable cabins, which afford them little more than shelter from the storms. The boor of Norway is said to make all his own utensils. In the Hebrides, whatever might be their ingenuity, the want of wood leaves them no materials. They are probably content with such accommodations as stones of different forms and sizes can afford them.

Their food is not better than their lodging. They seldom taste the flesh of land animals; for here are no markets. What each man eats is from his own stock. The great effect of money is to break property into small parts. In towns, he that has a shilling may have a piece of meat, but where there is no commerce, no man can eat mutton but by killing a sheep.

Fish in fair weather they need not want, but, I believe, man never lives long on fish, but by constraint; he will rather feed upon roots and berries.

The only fuel of the islands is peat. Their wood is all consumed, and coal they have not yet found. Peat is dug out of the marshes, from the depth of one foot to that of six. That is accounted the best which is nearest the surface. It appears to be a mass of black earth held together by vegetable fibres. I know not whether the earth be bi-

tuminous, or whether the fibres be not the only combustible part, which, by heating the interposed earth red-hot, make a burning mass. The heat is not very strong nor lasting. The ashes are yellowish, and in a large quantity. When they dig peat, they cut it into square pieces, and pile it up to dry beside the house. In some places it has an offensive smell. It is like wood charred for the smith. The common method of making peat fires is by heaping it on the hearth, but it burns well in grates, and in the best houses is so used.

The common opinion is, that peat grows again where it has been cut, which, as it seems to be chiefly a vegetable substance, is not unlikely to be true, whether known or not to those who relate it.

There are water mills in Sky and Raasay, but where they are too far distant, the house-wives grind their oats with a quern, or hand-mill, which consists of two stones, about a foot and a half in diameter, the lower is a little convex, to which the concavity of the upper must be fitted. In the middle of the upper stone is a round hole, and on one side is a long handle. The grinder sheds the corn gradually into the hole with one hand, and works the handle round with the other. The corn slides down the convexity of the lower stone, and by the motion of the upper is ground in its passage. These stones are found in Lochabar.

The islands afford few pleasures, except to the hardy sportsman, who can tread the moor and climb the mountain. The distance of one family from another, in a country where travelling has so much difficulty, makes frequent intercourse impracticable.

Visits last several days, and are commonly paid by water, yet I never saw a boat furnished with benches, or made commodious by any addition to the first fabrick. Conveniencies are not missed where they never were enjoyed

The solace which the bagpipe can give, they have long enjoyed; but among other changes, which the last revolution introduced, the use of the bagpipe begins to be forgotten. Some of the chief families still entertain a piper, whose office was anciently hereditary. Macrimmon was piper to Macleod, and Rankin to Maclean of Col.

The tunes of the bagpipe are traditional. There has been in Sky, beyond all time of memory, a college of pipers, under the direction of Macrimmon, which is not quite extinct. There was another in Mull, superintended by Rankin, which expired about sixteen years ago. To these colleges, while the pipe retained its honour, the students of musick repaired for education. I have had my dinner exhilarated by the bagpipe, at Armidale, at Dunvegan, and in Col.

The general conversation of the islanders has nothing particular. I did not meet with the inquisitiveness of which I have read, and suspect the judgment to have been rashly made. A stranger of curiosity comes into a place where a stranger is seldom seen: he importunes the people with questions, of which they cannot guess the motive, and gazes with surprise on things which they, having had them always before their eyes, do not suspect of any thing wonderful. He appears to them like some being of another world, and then thinks it

peculiar that they take their turn to inquire whence he comes, and whither he is going.

The islands were long unfurnished with instruction for youth, and none but the sons of gentlemen could have any literature. There are now parochial schools, to which the lord of every manor pays a certain stipend. Here the children are taught to read, but by the rule of their institution, they teach only English, so that the natives read a language which they may never use or understand. If a parish, which often happens, contains several islands, the school being but in one, cannot assist the rest. This is the state of Col, which, however, is more enlightened than some other places, for the deficiency is supplied by a young gentleman, who, for his own improvement, travels every year on foot over the Highlands to the session at Aberdeen, and at his return, during the vacation, teaches to read and write in his native island.

In Sky there are two grammar-schools, where boarders are taken to be regularly educated. The price of board is from three pounds, to four pounds ten shillings a year, and that of instruction is half-a-crown a quarter. But the scholars are birds of passage, who live at school only in the summer, for in winter provisions cannot be made for any considerable number in one place. This periodical dispersion impresses strongly the scarcity of these countries.

Having heard of no boarding-school for ladies nearer than Inverness, I suppose their education is generally domestick. The elder daughters of the higher families are sent into the world, and may

contribute by their acquisitions to the improvement of the rest

Women must here study to be either pleasing or useful. Their deficiencies are seldom supplied by very liberal fortunes. A hundred pounds is a portion beyond the hope of any but the laird's daughter. They do not indeed often give money with their daughters; the question is, How many cows a young lady will bring her husband? A rich maiden has from ten to forty; but two cows are a decent fortune for one who pretends to no distinction.

The religion of the islands is that of the kirk of Scotland. The gentlemen with whom I conversed are all inclined to the English liturgy, but they are obliged to maintain the established minister, and the country is too poor to afford payment to another, who must live wholly on the contribution of his audience.

They therefore all attend the worship of the kirk, as often as a visit from their minister, or the practicability of travelling, gives them opportunity, nor have they any reason to complain of insufficient pastors; for I saw not one in the islands, whom I had reason to think either deficient in learning, or irregular in life, but found several with whom I could not converse without wishing, as my respect increased, that they had not been presbyterians.

The ancient rigour of puritanism is now very much relaxed, though all are not yet equally enlightened. I sometimes met with prejudices sufficiently malignant, but they were prejudices of ignorance. The ministers in the islands had attained

such knowledge as may justly be admired in men, who have no motive to study, but generous curiosity, or, what is still better, desire of usefulness, with such politeness as so narrow a circle of converse could not have supplied, but to minds naturally disposed to elegance

Reason and truth will prevail at last The most learned of the Scottish doctors would now gladly admit a form of prayer, if the people would endure it. The zeal or rage of congregations has its different degrees In some parishes the Lord's Prayer is suffered in others it is still rejected as a form; and he that should make it part of his supplication would be suspected of heretical pravity.

The principle upon which extemporary prayer was originally introduced, is no longer admitted The minister formerly, in the effusion of his prayer, expected immediate, and perhaps perceptible inspiration, and therefore thought it his duty not to think before what he should say. It is now universally confessed, that men pray as they speak on other occasions, according to the general measure of their abilities and attainments Whatever each may think of a form prescribed by another, he cannot but believe that he can himself compose by study and meditation a better prayer than will rise in his mind at a sudden call, and if he has any hope of supernatural help, why may he not as well receive it when he writes as when he speaks?

In the variety of mental powers, some must perform extemporary prayer with much imperfection, and in the eagerness and rashness of contradictory

opinions, if publick liturgy be left to the private judgment of every minister, the congregation may often be offended or misled

There is in Scotland, as among ourselves, a restless suspicion of popish machinations, and a clamour of numerous converts to the Romish religion. The report is, I believe, in both parts of the island equally false. The Romish religion is professed only in Egg and Canna, two small islands, into which the reformation never made its way. If any missionaries are busy in the Highlands, their zeal entitles them to respect, even from those who cannot think favourably of their doctrine

The political tenets of the islanders I was not curious to investigate, and they were not eager to obtrude. Their conversation is decent and inoffensive. They disdain to drink for their principles, and there is no disaffection at their tables. I never heard a health offered by a Highlander that might not have circulated with propriety within the precincts of the king's palace.

Legal government has yet something of novelty to which they cannot perfectly conform. The ancient spirit that appealed only to the sword, is yet among them. The tenant of Scalpa, an island belonging to Macdonald, took no care to bring his rent, when the landlord talked of exacting payment, he declared his resolution to keep his ground and drive all intruders from the island, and continued to feed his cattle as on his own land, till it became necessary for the sheriff to dislodge him by violence

The various kinds of superstition which prevailed here, as in all other regions of ignorance, are by the diligence of the ministers almost extirpated

Of Brownny, mentioned by Martin, nothing has been heard for many years. Brownny was a sturdy fairy, who, if he was fed, and kindly treated, would, as they said, do a great deal of work. They now pay him no wages, and are content to labour for themselves.

In Troda, within these three-and-thirty years, milk was put every Saturday for Greogach, or the Old Man with the Long Beard. Whether Greogach was courted as kind, or dreaded as terrible, whether they meant, by giving him the milk, to obtain good or avert evil, I was not informed. The minister is now living by whom the practice was abolished.

They have still among them a great number of charms for the cure of different diseases, they are all invocations, perhaps transmitted to them from the times of popery, which increasing knowledge will bring into disuse.

They have opinions, which cannot be ranked with superstition, because they regard only natural effects. They expect better crops of grain, by sowing their seed in the moon's increase. The moon has great influence in vulgar philosophy. In my memory it was a precept annually given in one of the English almanacks, *to kill hogs when the moon was increasing, and the bacon would prove the better in boiling.*

We should have had little claim to the praise of curiosity, if we had not endeavoured with particular

attention to examine the question of the Second Sight. Of an opinion received for centuries by a whole nation, and supposed to be confirmed through its whole descent by a series of successive facts, it is desirable that the truth should be established, or the fallacy detected.

The Second Sight is an impression made either by the mind upon the eye, or by the eye upon the mind, by which things distant or future are perceived, and seen as if they were present. A man on a journey far from home falls from his horse, another, who is perhaps at work about the house, sees him bleeding on the ground, commonly with a landscape of the place where the accident befalls him. Another seer, driving home his cattle, or wandering in idleness, or musing in the sunshine, is suddenly surprised by the appearance of a bridal ceremony, or funeral procession, and counts the mourners or attendants, of whom, if he knows them, he relates the names, if he knows them not, he can describe the dresses. Things distant are seen at the instant when they happen. Of things future I know not that there is any rule for determining the time between the sight and the event.

This receptive faculty, for power it cannot be called, is neither voluntary nor constant. The appearances have no dependence upon choice: they cannot be summoned, detained, or recalled. The impression is sudden, and the effect often painful.

By the term Second Sight, seems to be meant a mode of seeing, superadded to that which nature generally bestows. In the Earse it is called *Taisch*, which signifies likewise a spectre, or a vision. I

know not, nor is it likely that the Highlanders ever examined, whether by Taisch, used for Second Sight, they mean the power of seeing, or the thing seen.

I do not find it to be true, as it is reported, that to the Second Sight nothing is presented but phantoms of evil. Good seems to have the same proportion in those visionary scenes, as it obtains in real life. almost all remarkable events have evil for their basis; and are either miseries incurred, or miseries escaped. Our sense is so much stronger of what we suffer, than of what we enjoy, that the ideas of pain predominate in almost every mind. What is recollection but a revival of vexations, or history but a record of wars, treasons, and calamities? Death, which is considered as the greatest evil, happens to all. The greatest good, be it what it will, is the lot but of a part.

That they should often see death is to be expected, because death is an event frequent and important. But they see likewise more pleasing incidents. A gentleman told me, that when he had once gone far from his own island, one of his labouring servants predicted his return, and described the livery of his attendant, which he had never worn at home; and which had been, without any previous design, occasionally given him.

Our desire of information was keen, and our inquiry frequent. Mr Boswell's frankness and gaiety made every body communicative; and we heard many tales of these airy shows, with more or less evidence and distinctness.

It is the common talk of the Lowland Scots, that

the notion of the Second Sight is wearing away with other superstitions ; and that its reality is no longer supposed, but by the grossest people. How far its prevalence ever extended, or what ground it has lost, I know not. The islanders of all degrees, whether of rank or understanding, universally admit it, except the ministers, who universally deny it, and are suspected to deny it, in consequence of a system, against conviction. One of them honestly told me, that he came to Sky with a resolution not to believe it

Strong reasons for incredulity will readily occur. This faculty of seeing things out of sight is local, and commonly useless. It is a breach of the common order of things, without any visible reason or perceptible benefit. It is ascribed only to a people very little enlightened, and among them, for the most part, to the mean and ignorant

To the confidence of these objections it may be replied, that by presuming to determine what is fit, and what is beneficial, they presuppose more knowledge of the universal system than man has attained ; and therefore depend upon principles too complicated and extensive for our comprehension ; and that there can be no security in the consequence, when the premises are not understood ; that the Second Sight is only wonderful because it is rare, for, considered in itself, it involves no more difficulty than dreams, or perhaps than the regular exercise of the cogitative faculty, that a general opinion of communicative impulses, or visionary representations, has prevailed in all ages and all nations ; that particular instances have been given, with such

evidence as neither Bacon nor Bayle has been able to resist; that sudden impressions, which the event has verified, have been felt by more than own or publish them; that the Second Sight of the Hebrides implies only the local frequency of a power which is nowhere totally unknown; and that where we are unable to decide by antecedent reason, we must be content to yield to the force of testimony.

By pretension to Second Sight, no profit was ever sought or gained. It is an involuntary affection, in which neither hope nor fear are known to have any part. Those who profess to feel it do not boast of it as a privilege, nor are considered by others as advantageously distinguished. They have no temptation to feign, and their hearers have no motive to encourage the imposture.

To talk with any of these seers is not easy. There is one living in Sky, with whom we would have gladly conversed, but he was very gross and ignorant, and knew no English. The proportion in these countries of the poor to the rich is such, that if we suppose the quality to be accidental, it can very rarely happen to a man of education, and yet on such men it has sometimes fallen. There is now a second sighted gentleman in the Highlands, who complains of the terrors to which he is exposed.

The foresight of the seers is not always prescience. They are impressed with images, of which the event only shows them the meaning. They tell what they have seen to others, who are at that time not more knowing than themselves, but may become at last very adequate witnesses, by comparing the narrative with its verification.

To collect sufficient testimonies for the satisfaction of the publick, or of ourselves, would have required more time than we could bestow. There is, against it, the seeming analogy of things confusedly seen, and little understood, and for it, the indistinct cry of national persuasion, which may be perhaps resolved at last into prejudice and tradition. I never could advance my curiosity to conviction; but came away at last only willing to believe.

As there subsists no longer in the islands much of that peculiar and discriminative form of life, of which the idea had delighted our imagination, we were willing to listen to such accounts of past times as would be given us. But we soon found what memorials were to be expected from an illiterate people, whose whole time is a series of distress, where every morning is labouring with expedients for the evening; and where all mental pains or pleasure arose from the dread of winter, the expectation of spring, the caprices of their chiefs, and the motions of the neighbouring clans, where there was neither shame from ignorance, nor pride in knowledge, neither curiosity to inquire, nor vanity to communicate.

The chiefs indeed were exempt from urgent penury and daily difficulties, and in their houses were preserved what accounts remained of past ages. But the chiefs were sometimes ignorant and careless, and sometimes kept busy by turbulence and contention, and one generation of ignorance effaces the whole series of unwritten history. Books are faithful repositories, which may be a while neglected

or forgotten; but when they are opened again, will again impart their instruction. memory, once interrupted, is not to be recalled. Written learning is a fixed luminary, which, after the cloud that had hidden it is past away, is again bright in its proper station. Tradition is but a meteor, which, if once it falls, cannot be rekindled.

It seems to be universally supposed, that much of the local history was preserved by the bards, of whom one is said to have been retained by every great family. After these bards were some of my first inquiries; and I received such answers, as for a while, made me please myself with my increase of knowledge, for I had not then learned how to estimate the variation of a Highlander

They said that a great family had a *bard* and a *senachy*, who were the poet and historian of the house; and an old gentleman told me that he remembered one of each. Here was a dawn of intelligence. Of men that had lived within memory, some certain knowledge might be attained. Though the office had ceased, its effects might continue, the poems might be found, though there was no poet.

Another conversation indeed informed me, that the same man was both bard and *senachy*. This variation discouraged me; but as the practice might be different in different times, or at the same time in different families, there was yet no reason for supposing that I must necessarily sit down in total ignorance

Soon after I was told by a gentleman who is generally acknowledged the greatest master of

Hebridian antiquities, that there had indeed once been both bards and senachies; and that *senachi* signified *the man of talk*, or of conversation, but that neither bard nor senachi had existed for some centuries. I have no reason to suppose it exactly known at what time the custom ceased, nor did it probably cease in all houses at once. But whenever the practice of recitation was disused, the works, whether poetical or historical, perished with the authors; for in those times nothing had been written in the Earse language

Whether the *man of talk* was an historian, whose office was to tell truth, or a story-teller, like those which were in the last century, and perhaps are now among the Irish, whose trade was only to amuse, it now would be vain to inquire

Most of the domestick offices were, I believe, hereditary, and probably the laureat of a clan was always the son of the last laurcat. The history of the race could no otherwise be communicated or retained; but what genius could be expected in a poet by inheritance?

The nation was wholly illiterate. Neither bards nor senachies could write or read; but if they were ignorant, there was no danger of detection, they were believed by those whose vanity they flattered

The recital of genealogies, which has been considered as very efficacious to the preservation of a true series of ancestry, was anciently made when the heir of the family came to manly age. This practice has never subsisted, within time of memory, nor was much credit due to such rehearsers, who might ob-

trude fictitious pedigrees either to please their masters, or to hide the deficiency of their own memories

Where the chiefs of the Highlands have found the histories of their descent is difficult to tell, for no Earse genealogy was ever written. In general this only is evident, that the principal house of a clan must be very ancient, and that those must have lived long in a place, of whom it is not known when they came thither.

Thus hopeless are all attempts to find any traces of Highland learning. Nor are their primitive customs and ancient manner of life otherwise than very faintly and uncertainly remembered by the present race.

The peculiarities which strike the native of a commercial country proceeded in a great measure from the want of money. To the servants and dependents that were not domesticks, and, if an estimate be made from the capacity of any of their old houses which I have seen, their domesticks could have been but few, were appropriated certain portions of land for their support. Macdonald has a piece of ground yet, called the Bards or Senachies field. When a beef was killed for the house, particular parts were claimed as fees by the several officers or workmen. What was the right of each I have not learned. The head belonged to the smith, and the udder of a cow to the piper, the weaver had likewise his particular part, and so many pieces followed these prescriptive claims, that the laird's was at last but little.

The payment of rent in kind has been so long disused in England, that it is totally forgotten. It was

practised very lately in the Hebrides, and probably still continues not only at St Kilda, where money is not yet known, but in others of the smaller and remoter islands. It were perhaps to be desired, that no change in this particular should have been made. When the land could only eat the produce of his lands, he was under the necessity of residing upon them; and when the tenant could not convert his stock into more portable riches, he could never be tempted away from his farm, from the only place where he could be wealthy. Money confounds subordination, by overpowering the distinctions of rank and birth, and weakens authority, by supplying power of resistance, or expedients for escape. The feudal system is formed for a nation employed in agriculture, and has never long kept its hold where gold and silver have become common.

Their arms were anciently the *Glaimor e*, or great two-handed sword, and afterwards the two-edged sword and target, or buckler, which was sustained on the left arm. In the midst of the target, which was made of wood, covered with leather, and studded with nails, a slender lance about two feet long was sometimes fixed, it was heavy and cumbersome, and accordingly has for some time past been gradually laid aside. Very few targets were at Culloden. The dirk, or broad dagger, I am afraid, was of more use in private quarrels than in battles. The Lochaber ax is only a slight alteration of the old English bill.

After all that has been said of the force and terror of the Highland sword, I could not find that the art of defence was any part of common education.

The gentlemen were perhaps sometimes skilful gladiators, but the common men had no other powers than those of violence and courage. Yet it is well known, that the onset of the Highlanders was very formidable. As an army cannot consist of philosophers, a panic is easily excited by any unwonted mode of annoyance. New dangers are naturally magnified, and men accustomed only to exchange bullets at a distance, and rather to hear their enemies than see them, are discouraged and amazed when they find themselves encountered hand to hand, and catch the gleam of steel flashing in their faces.

The Highland weapons gave opportunity for many exertions of personal courage, and sometimes for single combats in the field, like those which occur so frequently in fabulous wars. At Falkirk, a gentleman now living, was, I suppose after the retreat of the king's troops, engaged at a distance from the rest with an Irish Dragoon. They were both skilful swordsmen, and the contest was not easily decided; the dragoon at last had the advantage, and the Highlander called for quarter; but quarter was refused him, and the fight continued till he was reduced to defend himself upon his knee. At that instant one of the Macleods came to his rescue, who, as it is said, offered quarter to the dragoon, but he thought himself obliged to reject what he had before refused, and, as battle gives little time to deliberate, was immediately killed.

Funerals were formerly solemnized by calling multitudes together, and entertaining them at great expense. This emulation of useless cost has been

for some time discouraged, and at last in the isle of Sky is almost suppressed.

Of the Earse language, as I understand nothing, I cannot say more than I have been told. It is the rude speech of a barbarous people, who had few thoughts to express, and were content, as they conceived grossly, to be grossly understood. After what has been lately talked of Highland bards, and Highland genius, many will startle when they are told, that the Earse never was a written language, that there is not in the world an Earse manuscript a hundred years old, and that the sounds of the Highlanders were never expressed by letters, till some little books of piety were translated, and a metrical version of the Psalms was made by the synod of Argyle. Whoever therefore now writes in this language, spells according to his own perception of the sound, and his own idea of the power of the letters. The Welsh and the Irish are cultivated tongues. The Welsh, two hundred years ago, insulted their English neighbours for the instability of their orthography; while the Earse merely floated in the breath of the people, and could therefore receive little improvement.

When a language begins to teem with books, it is tending to refinement; as those who undertake to teach others must have undergone some labour in improving themselves, they set a proportionate value on their own thoughts, and wish to enforce them by efficacious expressions, speech becomes embodied and permanent, different modes and phrases are compared, and the best obtains an establishment.

By degrees, one age improves upon another Exactness is first obtained, and afterwards elegance
But diction, merely vocal, is always in its childhood
As no man leaves his eloquence behind him, the new generations have all to learn There may possibly be books without a polished language, but there can be no polished language without books

That the bards could not read more than the rest of their countrymen, it is reasonable to suppose, because, if they had read, they could probably have written, and how high their compositions may reasonably be rated, an inquirer may best judge by considering what stores of imagery, what principles of ratiocination, what comprehension of knowledge, and what delicacy of elocution he has known any man attain who cannot read The state of the bards was yet more hopeless. He that cannot read, may now converse with those that can, but the bard was a barbarian among barbarians, who, knowing nothing himself, lived with others that knew no more

There has lately been in the islands one of these illiterate poets, who hearing the Bible read at church, is said to have turned the sacred history into verse I heard part of a dialogue, composed by him, translated by a young lady in Mull, and thought it had more meaning than I expected from a man totally uneducated, but he had some opportunities of knowledge, he lived among a learned people. After all that has been done for the instruction of the Highlanders, the antipathy between their language and literature still continues, and no man that has learned only Earse is, at this time, able to read

The Earse has many dialects, and the words used in some islands are not always known in others. In literate nations, though the pronunciation, and sometimes the words of common speech, may differ, as now in England, compared with the south of Scotland, yet there is a written diction, which pervades all dialects, and is understood in every province. But where the whole language is colloquial, he that has only one part never gets the rest, as he cannot get it but by change of residence

In an unwritten speech, nothing that is not very short is transmitted from one generation to another. Few have opportunities of hearing a long composition often enough to learn it, or have inclination to repeat it so often as is necessary to retain it; and what is once forgotten is lost for ever. I believe there cannot be recovered, in the whole Earse language, five hundred lines of which there is any evidence to prove them a hundred years old. Yet I hear that the father of Ossian boasts of two chests more of ancient poetry, which he suppresses, because they are too good for the English

He that goes into the Highlands with a mind naturally acquiescent, and a credulity eager for wonders, may come back with an opinion very different from mine; for the inhabitants, knowing the ignorance of all strangers in their language and antiquities, perhaps are not very scrupulous adherents to truth; yet I do not say that they deliberately speak studied falsehood, or have a settled purpose to deceive. They have inquired and considered little, and do not always feel their own ignorance. They are not much accustomed to be interrogated

by others, and seem never to have thought upon interrogating themselves; so that if they do not know what they tell to be true, they likewise do not distinctly perceive it to be false

Mr. Boswell was very diligent in his inquiries, and the result of his investigations was, that the answer to the second question was commonly such as nullified the answer to the first.

We were a while told, that they had an old translation of the scriptures, and told it till it would appear obstinacy to inquire again. Yet by continued accumulation of questions we found, that the translation meant, if any meaning there were, was nothing else than the Irish Bible.

We heard of manuscripts that were, or that had been, in the hands of somebody's father, or grandfather; but at last we had no reason to believe they were other than Irish. Martin mentions Irish, but never any Earse manuscripts, to be found in the islands in his time

I suppose my opinion of the poems of Ossian is already discovered. I believe they never existed in any other form than that which we have seen. The editor, or author, never could show the original, nor can it be shown by any other. To revenge reasonable incredulity, by refusing evidence, is a degree of insolence, with which the world is not yet acquainted, and stubborn audacity is the last refuge of guilt. It would be easy to show it if he had it, but whence could it be had? It is too long to be remembered, and the language formerly had nothing written. He has doubtless inserted names that circulate in popular stories, and may have translated some wandering

ballads, if any can be found ; and the names, and some of the images, being recollected, make an inaccurate auditor imagine, by the help of Caledonian bigotry, that he has formerly heard the whole.

I asked a very learned minister in Sky, who had used all arts to make me believe the genuineness of the book, whether at last he believed it himself? but he would not answer. He wished me to be deceived, for the honour of his country ; but would not directly and formally deceive me. Yet has this man's testimony been publickly produced, as of one that held Fingal to be the work of Ossian.

It is said that some men of integrity profess to have heard parts of it, but they all heard them when they were boys ; and it was never said that any of them could recite six lines. They remember names, and perhaps some proverbial sentiments ; and, having no distinct ideas, coin a resemblance without an original. The persuasion of the Scots, however, is far from universal ; and in a question so capable of proof, why should doubt be suffered to continue? The editor has been heard to say, that part of the poem was received by him, in the Saxon character. He has then found, by some peculiar fortune, an unwritten language, written in a character which the natives probably never beheld.

I have yet supposed no imposture but in the publisher ; yet I am far from certainty, that some translations have not been lately made, that may now be pretended as parts of the original work. Credulity on one part is a strong temptation to deceit on the other, especially to deceit of which no personal inquiry is

the consequence, and which flatters the author with his own ingenuity. The Scots have something to plead for their easy reception of an improbable fiction they are seduced by their fondness for their supposed ancestors. A Scotchman must be a very sturdy moralist, who does not love Scotland better than truth, he will always love it better than inquiry and if falsehood flatters his vanity, will not be very diligent to detect it Neither ought the English to be much influenced by Scotch authority; for of the past and present state of the whole Earse nation, the Lowlanders are at least as ignorant as ourselves To be ignorant is painful, but it is dangerous to quiet our uneasiness by the delusive opiate of hasty persuasion

But this is the age in which those who could not read, have been supposed to write, in which the giants of antiquated romance have been exhibited as realities If we know little of the ancient Highlanders, let us not fill the vacuity with Ossian If we have not searched the Magellanick regions, let us however forbear to people them with Patagons.

Having waited some days at Armidel, we were flattered at last with a wind that promised to convey us to Mull We went on board a boat that was taking in kelp, and left the isle of Sky behind us We were doomed to experience, like others, the danger of trusting to the wind, which blew against us, in a short time, with such violence, that we, being no seasoned sailors, were willing to call it a tempest I was seasick, and lay down Mr Boswell kept the deck The master knew not well whither to go, and our diffi-

culties might perhaps have filled a very pathetick page, had not Mr Maclean of Col, who, with every other qualification which insular life requires, is a very active and skilful mariner, piloted us safe into his own harbour.

COL

In the morning we found ourselves under the isle of Col, where we landed; and passed the first day and night with captain Maclean, a gentleman who has lived some time in the East Indies, but having dethroned no Nabob, is not too rich to settle in his own country

Next day the wind was fair, and we might have had an easy passage to Mull; but having, contrarily to our own intention, landed upon a new island, we would not leave it wholly unexamined. We therefore suffered the vessel to depart without us, and trusted the skies for another wind

Mr. Maclean of Col, having a very numerous family, has, for some time past, resided at Aberdeen, that he may superintend their education, and leaves the young gentleman, our friend, to govern his dominions, with the full power of a Highland chief. By the absence of the laird's family, our entertainment was made more difficult, because the house was in a great degree disfurnished, but young Col's kindness and activity supplied all defects, and procured us more than sufficient accommodation

Here I first mounted a little Highland steed, and if there had been many spectators, should have been somewhat ashamed of my figure in the march. The horses of the islands, as of other barren coun-

tries, are very low they are indeed musculous and strong, beyond what their size gives reason for expecting; but a bulky man upon one of their backs makes a very disproportionate appearance

From the habitation of captain Maclean we went to Grissipol, but called by the way on M^r Hector Maclean, the minister of Col, whom we found in a hut, that is, a house of only one floor, but with windows and chimney, and not inelegantly furnished, Mr. Maclean has the reputation of great learning he is seventy-seven years old, but not infirm, with a look of venerable dignity, excelling what I remember in any other man

His conversation was not unsuitable to his appearance I lost some of his good-will, by treating a heretical writer with more regard than, in his opinion, a heretick could deserve I honoured his orthodoxy, and did not much censure his asperity A man who has settled his opinions does not love to have the tranquillity of his conviction disturbed; and at seventy-seven it is time to be in earnest

Mention was made of the Earse translation of the New Testament, which has been lately published, and of which the learned M^r Macqueen of Sky spoke with commendation, but Mr Maclean said, he did not use it, because he could make the text more intelligible to his auditors by an extemporany version From this I inferred that the language of the translation was not the language of the isle of Col.

He has no publick edifice for the exercise of his ministry, and can officiate to no greater number than a room can contain, and the room of a hut is not very large This is all the opportunity of wor-

ship that is now granted to the inhabitants of the island, some of whom must travel thither perhaps ten miles. Two chapels were erected by their ancestors, of which I saw the skeletons, which now stand faithful witnesses of the triumph of Reformation.

The want of churches is not the only impediment to piety there is likewise a want of ministers. A parish often contains more islands than one; and each island can have the minister only in its own turn. At Raasay they had, I think, a right to service only every third Sunday. All the provision made by the present ecclesiastical constitution, for the inhabitants of about a hundred square miles, is a prayer and sermon in a little room, once in three weeks and even this parsimonious distribution is at the mercy of the weather and in those islands where the minister does not reside, it is impossible to tell how many weeks or months may pass without any public exercise of religion.

GRISSIPOL IN COL

After a short conversation with Mr Maclean, we went on to Grissipol, a house and farm tenanted by Mr Macsweyn, where I saw more of the ancient life of a Highlander than I had yet found. Mrs. Macsweyn could speak no English, and had never seen any other places than the islands of Sky, Mull, and Col but she was hospitable and good-humoured, and spread her table with sufficient liberality. We found tea here, as in every other place, but our spoons were of horn.

The house of Grissipol stands by a brook very

clear and quick; which is, I suppose, one of the most copious streams in the island. This place was the scene of an action, much celebrated in the traditional history of Col, but which probably no two relaters will tell alike.

Some time, in the obscure ages, Macneil of Barra married the lady Maclean, who had the isle of Col for her jointure. Whether Macneil detained Col, when the widow was dead, or whether she lived so long as to make her heirs impatient, is perhaps not now known. The younger son, called John Gerves, or John the Giant, a man of great strength, who was then in Ireland, either for safety or for education, dreamed of recovering his inheritance, and getting some adventurers together, which in those unsettled times was not hard to do, invaded Col. He was driven away, but was not discouraged, and collecting new followers, in three years came again with fifty men. In his way he stopped at Arto-rinish in Morvern, where his uncle was prisoner to Macleod, and was then with his enemies in a tent Maclean took with him only one servant, whom he ordered to stay at the outside, and where he should see the tent pressed outwards, to strike with his dirk, it being the intention of Maclean, as any man provoked him, to lay hands upon him, and push him back. He entered the tent alone, with his Lochaber axe in his hand, and struck such terror into the whole assembly, that they dismissed his uncle.

When he landed at Col, he saw the sentinel, who kept watch towards the sea, running off to Grissipol, to give Macneil, who was there with a hundred and

twenty men, an account of the invasion. He told Macgill, one of his followers, that if he intercepted that dangerous intelligence, by catching the courier, he would give him certain lands in Mull. Upon this promise Macgill pursued the messenger, and either killed or stopped him; and his posterity, till very lately, held the lands in Mull.

The alarm being thus prevented, he came unexpectedly upon Macneil. Chiefs were in those days never wholly unprovided for an enemy. A fight ensued, in which one of their followers is said to have given an extraordinary proof of activity, by bounding backwards over the brook of Grissipol Macneil being killed, and many of his clan destroyed, Maclean took possession of the island, which the Macneils attempted to conquer by another invasion, but were defeated and repulsed.

Maclean, in his turn, invaded the estate of the Macneils, took the castle of Brecacig, and conquered the isle of Barra, which he held for seven years, and then restored it to the heirs.

CASTLE OF COL

From Grissipol Mr Maclean conducted us to his father's seat, a neat new house, erected near the old castle, I think, by the last proprietor. Here we were allowed to take our station, and lived very commodiously, while we waited for moderate weather and a fair wind, which we did not so soon obtain, but we had time to get some information of the present state of Col, partly by inquiry, and partly by occasional excursions.

Col is computed to be thirteen miles in length, and three in breadth. Both the ends are the property of the duke of Argyle, but the middle belongs to Maclean, who is called Col, as the only laird.

Col is not properly rocky; it is rather one continued rock, of a surface much diversified with protuberances, and covered with a thin layer of earth, which is often broken, and discovers the stone. Such a soil is not for plants that strike deep roots; and perhaps in the whole island nothing has ever yet grown to the height of a table. The uncultivated parts are clothed with heath, among which industry has interspersed spots of grass and corn, but no attempt has been made to raise a tree. Young Col, who has a very laudable desire of improving his patrimony, purposes some time to plant an orchard; which, if it be sheltered by a wall, may perhaps succeed. He has introduced the culture of turnips, of which he has a field, where the whole work was performed by his own hand. His intention is to provide food for his cattle in the winter. This innovation was considered by Mr Macsweyn as the idle project of a young head, heated with English fancies, but he has now found that turnips will really grow, and that hungry sheep and cows will really eat them.

By such acquisitions as these, the Hebrides may in time rise above their annual distress. Wherever heath will grow, there is reason to think something better may draw nourishment, and by trying the production of other places, plants will be found suitable to every soil.

Col has many lochs, some of which have trouts and eels, and others have never yet been stocked; another proof of the negligence of the islanders, who might take fish in the inland waters when they cannot go to sea.

Their quadrupeds are horses, cows, sheep, and goats. They have neither deer, hares, nor rabbits. They have no vermin, except rats, which have been lately brought thither by sea, as to other places; and are free from serpents, frogs, and toads.

The harvest in Col, and in Lewis, is ripe sooner than in Sky, and the winter in Col is never cold, but very tempestuous. I know not that I ever heard the wind so loud in any other place; and Mr. Boswell observed that its noise was all its own, for there were no trees to increase it.

Noise is not the worst effect of the tempests; for they have thrown the sand from the shore over a considerable part of the land, and is said still to encroach and destroy more and more pasture, but I am not of opinion, that by any surveys or landmarks its limits have been ever fixed, or its progression ascertained. If one man has confidence enough to say that it advances, nobody can bring any proof to support him in denying it. The reason why it is not spread to a greater extent seems to be, that the wind and rain come almost together, and that it is made close and heavy by the wet before the storms can put it in motion. So thick is the bed, and so small the particles, that if a traveller should be caught by a sudden gust in dry weather, he would find it very difficult to escape with life.

For natural curiosities I was shown only two great masses of stone, which lie loose upon the ground, one on the top of a hill, and the other at a small distance from the bottom. They certainly were never put into their present places by human strength or skill; and though an earthquake might have broken off the lower stone, and rolled it into the valley, no account can be given of the other, which lies on the hill, unless, which I forgot to examine, there be still near it some higher rock, from which it might be torn. All nations have a tradition that their earliest ancestors were giants, and these stones are said to have been thrown up and down by a giant and his mistress. There are so many more important things, of which human knowledge can give no account, that it may be forgiven us, if we speculate no longer on two stones in Col.

This island is very populous. About nine-and-twenty years ago, the fencible men of Col were reckoned one hundred and forty, which is the sixth of eight hundred and forty; and probably some contrived to be left out of the list. The minister told us, that a few years ago the inhabitants were eight hundred, between the ages of seven and of seventy. Round numbers are seldom exact. But in this case the authority is good, and the error likely to be little. If to the eight hundred be added what the laws of computation require, they will be increased to at least a thousand; and if the dimensions of the country have been accurately related, every mile maintains more than twenty-five

This proportion of habitation is greater than the

appearance of the country seems to admit; for wherever the eye wanders, it seems much waste and little cultivation. I am more inclined to extend the land, of which no measure has ever been taken, than to diminish the people, who have been really numbered. Let it be supposed, that a computed mile contains a mile and a half, as was commonly found true in the mensuration of the English roads, and we shall then allot nearly twelve to a mile, which agrees much better with ocular observation.

Here, as in Sky, and other islands, are the laird, the tacksmen, and the under-tenants.

Mr. Maclean, the laird, has very extensive possessions, being proprietor, not only of far the greater part of Col, but of the extensive island of Rum, and a very considerable territory in Mull.

Rum is one of the larger islands, almost square, and therefore of great capacity in proportion to its sides. By the usual method of estimating computed extent, it may contain more than a hundred and twenty square miles.

It originally belonged to Clanronald, and was purchased by Col; who, in some dispute about the bargain, made Clanronald prisoner, and kept him nine months in confinement. Its owner represents it as mountainous, rugged, and barren. In the hills there are red deer. The horses are very small, but of a breed eminent for beauty. Col, not long ago, bought one of them from a tenant, who told him, that as he was of a shape uncommonly elegant, he could not sell him but at a high price; and that whoever had him should pay a guinea and a half.

There are said to be in Barra a race of horses yet smaller, of which the highest is not above thirty-six inches

The rent of Rum is not great. Mr Maclean declared that he should be very rich, if he could set his land at two-pence halfpenny an acre. The inhabitants are fifty-eight families, who continued papists for some time after the laird became a protestant. Then adherence to their old religion was strengthened by the countenance of the laird's sister, a zealous Romanist, till one Sunday, as they were going to mass under the conduct of their patroness, Maclean met them on the way, gave one of them a blow on the head with a *yellow stick*, I suppose a cane, for which the Earse had no name, and drove them to the kirk, from which they have never since departed. Since the use of this method of conversion, the inhabitants of Egg and Canna, who continue papists, call the protestantism of Rum the religion of the *Yellow Stick*.

The only popish islands are Egg and Canna. Egg is the principal island of a parish, in which, though he has no congregation, the protestant minister resides. I have heard of nothing curious in it, but the cave in which a former generation of the islanders were smothered by Macleod

If we had travelled with more leisure, it had not been fit to have neglected the popish islands. Popery is favourable to ceremony, and among ignorant nations, ceremony is the only preservative of tradition. Since protestantism was extended to the savage parts of Scotland, it has perhaps been one of the chief labours of the ministers to abolish stated

observances, because they continued the remembrance of the former religion. We therefore, who came to hear old traditions, and see antiquated manners, should probably have found them amongst the papists

Canna, the other popish island, belongs to Clanronald. It is said not to comprise more than twelve miles of land, and yet maintains as many inhabitants as Rum

We were at Col under the protection of the young laird, without any of the distresses which Mr Pennant, in a fit of simple credulity, seems to think almost worthy of an elegy by Ossian. Wherever we roved, we were pleased to see the reverence with which his subjects regarded him. He did not endeavour to dazzle them by any magnificence of dress. His only distinction was a feather in his bonnet; but as soon as he appeared, they forsook their work and clustered about him. He took them by the hand, and they seemed mutually delighted. He has the proper disposition of a chieftain, and seems desirous to continue the customs of his house. The bagpiper played regularly, when dinner was served, whose person and dress made a good appearance, and he brought no disgrace upon the family of Rankin, which has long supplied the lairds of Col with hereditary musick

The tacksmen of Col seem to live with less dignity and convenience than those of Sky, where they had good houses, and tables not only plentiful, but delicate. In Col only two houses pay the window-tax, for only two have six windows, which, I suppose, are the laird's and Mr. Macsweyn's

The rents have, till within seven years, been paid in kind, but the tenants finding that cattle and corn varied in their price, desired for the future to give their landlord money, which, not having yet arrived at the philosophy of commerce, they consider as being every year of the same value.

We were told of a particular mode of under-tenure. The tacksman admits some of his inferior neighbours to the cultivation of his grounds, on condition that performing all the work, and giving a third part of the seed, they shall keep a certain number of cows, sheep, and goats, and reap a third part of the harvest. Thus by less than the tillage of two acres they pay the rent of one.

There are tenants below the rank of tacksmen, that have got smaller tenants under them, for in every place, where money is not the general equivalent, there must be some whose labour is immediately paid by daily food.

A country that has no money, is by no means convenient for beggars, both because such countries are commonly poor, and because charity requires some trouble and some thought. A penny is easily given upon the first impulse of compassion, or impatience of importunity, but few will deliberately search their cupboards or their granaries to find out something to give. A penny is likewise easily spent, but victuals, if they are unprepared, require house-room, and fire, and utensils, which the beggar knows not where to find.

Yet beggars there sometimes are, who wander from island to island. We had, in our passage to

Mull, the company of a woman and her child, who had exhausted the charity of Col. The arrival of a beggar on an island is accounted a sinister event. Every body considers that he shall have the less for what he gives away. Their alms, I believe, is generally oatmeal.

Near to Col is another island called Tir-eye, eminent for its fertility. Though it has but half the extent of Rùm, it is so well peopled, that there have appeared, not long ago, nine hundred and fourteen at a funeral. The plenty of this island enticed beggars to it, who seemed so burdensome to the inhabitants, that a formal compact was drawn up, by which they obliged themselves to grant no more relief to casual wanderers, because they had among them an indigent woman of high birth, whom they considered as entitled to all that they could spare. I have read the stipulation, which was indited with juridical formality, but was never made valid by regular subscription.

If the inhabitants of Col have nothing to give, it is not that they are oppressed by their landlord. Their leases seem to be very profitable. One farmer, who pays only seven pounds a year, has maintained seven daughters and three sons, of whom the eldest is educated at Aberdeen for the ministry; and now, at every vacation, opens a school in Col.

Life is here, in some respects, improved beyond the condition of some other islands. In Sky what is wanted can only be bought, as the arrival of some wandering pedler may afford an opportunity; but in Col there is a standing shop, and in Mull there are two. A shop in the islands, as in other places of

little frequentation, is a repository of every thing requisite for common use Mr Boswell's journal was filled, and he bought some paper in Col To a man that ranges the streets of London, where he is tempted to contrive wants for the pleasure of supplying them, a shop affords no image worthy of attention, but in an island, it turns the balance of existence between good and evil To live in perpetual want of little things, is a state not indeed of torture, but of constant vexation I have in Sky had some difficulty to find ink for a letter; and if a woman breaks her needle, the work is at a stop

As it is, the islanders are obliged to content themselves with succedaneous means for many common purposes I have seen the chief man of a very wide district riding with a halter for a bridle, and governing his hobby with a wooden curb

The people of Col, however, do not want dexterity to supply some of their necessities Several arts which make trades, and demand apprenticeships in great cities, are here the practices of daily economy In every house candles are made, both moulded and dipped Their wicks are small shreds of linen cloth They all know how to extract from the cuddy oil for their lamps They all tan skins, and make brogues.

As we travelled through Sky, we saw many cottages, but they very frequently stood single on the naked ground In Col, where the hills opened a place convenient for habitation, we found a petty village, of which every hut had a little garden adjoining, thus they made an appearance of social commerce and mutual offices, and of some attention

to convenience and future supply. There is not in the Western Islands any collection of buildings that can make pretensions to be called a town, except in the isle of Lewis, which I have not seen.

If Lewis is distinguished by a town, Col has also something peculiar. The young laird has attempted what no islander perhaps ever thought on. He has begun a road capable of a wheel-carriage. He has carried it about a mile, and will continue it by annual elongation from his house to the harbour.

Of taxes here is no reason for complaining, they are paid by a very easy composition. The malt-tax for Col is twenty shillings. Whisky is very plentiful. there are several stills in the island, and more is made than the inhabitants consume.

The great business of insular policy is how to keep the people in their own country. As the world has been let in upon them, they have heard of happier climates, and less arbitrary government, and if they are disgusted, have emissaries among them ready to offer them land and houses, as a reward for deserting their chief and clan. Many have departed both from the main of Scotland, and from the islands, and all that go may be considered as subjects lost to the British crown, for a nation scattered in the boundless regions of America resembles rays diverging from a focus. All the rays remain, but the heat is gone. Their power consisted in their concentration. when they are dispersed, they have no effect.

It may be thought that they are happier by the change; but they are not happy as a nation, for they are a nation no longer. As they contribute not to

the prosperity of any community, they must want that security, that dignity, that happiness, whatever it be, which a prosperous community throws back upon individuals

The inhabitants of Col have not yet learned to be weary of their heath and rocks, but attend their agriculture and their dairies, without listening to American seducements

There are some however who think that this emigration has raised terror disproportionate to its real evil; and that it is only a new mode of doing what was always done. The Highlands, they say, never maintained their natural inhabitants, but the people, when they found themselves too numerous, instead of extending cultivation, provided for themselves by a more compendious method, and sought better fortune in other countries. They did not indeed go away in collective bodies, but withdrew invisibly, a few at a time, but the whole number of fugitives was not less, and the difference between other times and this, is only the same as between evaporation and effusion.

This is plausible, but I am afraid it is not true. Those who went before, if they were not sensibly missed, as the argument supposes, must have gone either in less number, or in a manner less detrimental, than at present, because formerly there was no complaint. Those who then left the country were generally the idle dependants on overburdened families, or men who had no property, and therefore carried away only themselves. In the present eagerness of emigration, families, and almost communities, go away together. Those who were con-

sidered as prosperous and wealthy, sell their stock and carry away the money. Once none went away but the useless and poor, in some parts there is now reason to fear, that none will stay but those who are too poor to remove themselves, and too useless to be removed at the cost of others.

Of antiquity there is not more knowledge in Col than in other places, but every where something may be gleaned.

How ladies were portioned, when there was no money, it would be difficult for an Englishman to guess. In 1619, Maelean, of Dronart, in Mull, married his sister Fingala to Maelean of Col, with a hundred and eighty kine, and stipulated, that if she became a widow, her jointure should be three hundred and sixty. I suppose some proportionate tract of land was appropriated to their pasturage.

The disposition to pompous and expensive funerals, which has at one time or other prevailed in most parts of the civilized world, is not yet suppressed in the islands, though some of the ancient solemnities are worn away, and singers are no longer hired to attend the proceession. Nineteen years ago, at the burial of the laird of Col, were killed thirty cows, and about fifty sheep. The number of the cows is positively told, and we must suppose other vietuals in like proportion.

Mr. Maelean informed us of an old game, of which he did not tell the original, but which may perhaps be used in other places, where the reason of it is not yet forgot. At New-year's eve, in the hall or castle of the laird, where, at festal seasons, there may be supposed a very numerous company, one man

dresses himself in a cow's hide, upon which other men beat with sticks. He runs with all this noise round the house, which all the company quits in a counterfeited fright. the door is then shut. At New-year's eve there is no great pleasure to be had out of doors in the Hebrides. They are sure soon to recover from their terror enough to solicit for re-admission, which, for the honour of poetry, is not to be obtained but by repeating a verse, with which those that are knowing and provident take care to be furnished.

Very near the house of Maclean stands the castle of Col, which was the mansion of the laird, till the house was built. It is built upon a rock, as Mr Boswell remarked, that it might not be mined. It is very strong, and having been not long uninhabited, is yet in repair. On the wall was, not long ago, a stone with an inscription, importing, that *if any man of the clan of Maclonich shall appear before this castle, though he come at midnight, with a man's head in his hand, he shall there find safety and protection against all but the king*.

This is an old Highland treaty made upon a very memorable occasion. Maclean, the son of John Gerves, who recovered Col, and conquered Barra, had obtained, it is said, from James the Second, a grant of the lands of Lochiel, forfeited, I suppose, by some offence against the state.

Forfeited estates were not in those days quietly resigned, Maclean, therefore, went with an armed force to seize his new possessions, and I know not for what reason, took his wife with him. The Camerons rose in defence of their chief, and a battle

was fought at the head of Loch Ness, near the place where Fort Augustus now stands, in which Lochiel obtained the victory, and Maclean, with his followers, was defeated and destroyed.

The lady fell into the hands of the conquerors, and being found pregnant was placed in the custody of Maclonich, one of a tribe or family branched from Cameron, with orders, if she brought a boy, to destroy him, if a girl, to spare her

Maclonich's wife, who was with child likewise, had a girl about the same time at which lady Maclean brought a boy, and Maclonich, with more generosity to his captive, than fidelity to his trust, contrived that the children should be changed

Maclean being thus preserved from death, in time recovered his original patrimony; and in gratitude to his friend, made his castle a place of refuge to any of the clan that should think himself in danger; and as a proof of reciprocal confidence, Maclean took upon himself and his posterity the care of educating the heir of Maclonich

This story, like all other traditions of the Highlands, is variously related; but though some circumstances are uncertain, the principal fact is true. Maclean undoubtedly owed his preservation to Maclonich, for the treaty between the two families has been strictly observed it did not sink into disuse and oblivion, but continued in its full force while the chieftains retained their power I have read a demand of protection, made not more than thirty-seven years ago, for one of the Maclonichs, named Ewen Cameron, who had been accessory to the death of Macmartin, and had been banished by Lochiel, his

lord, for a certain term ; at the expiration of which he returned married from France : but the Macmartins, not satisfied with the punishment, when he attempted to settle, still threatened him with vengeance. He therefore asked, and obtained shelter in the isle of Col.

The power of protection subsists no longer . but what the law permits is yet continued, and Maclean of Col now educates the heir of Macdonich

There still remains in the islands, though it is passing fast away, the custom of fosterage . A laird, a man of wealth and eminence, sends his child, either male or female, to a tacksman, or tenant, to be fostered . It is not always his own tenant, but some distant friend, that obtains this honour ; for an honour such a trust is very reasonably thought . The terms of fosterage seem to vary in different islands . In Mull, the father sends with his child a certain number of cows, to which the same number is added by the fosterer. The father appropriates a proportionable extent of ground, without rent, for their pasturage . If every cow brings a calf, half belongs to the fosterer, and half to the child ; but if there be only one calf between two cows, it is the child's, and when the child returns to the parents, it is accompanied by all the cows given, both by the father and by the fosterer, with half of the increase of the stock by propagation. These beasts are considered as a portion, and called Macalivie cattle, of which the father has the produce, but is supposed not to have the full property, but to owe the same number to the child, as a portion to the daughter, or a stock for the son

Children continue with the fosterer perhaps six years, and cannot, where this is the practice, be considered as burdensome. The fosterer, if he gives four cows, receives likewise four, and has, while the child continues with him, grass for eight without rent, with half the calves, and all the milk, for which he pays only four cows when he dismisses his *dalt*, for that is the name for a fostered child.

Fosterage is, I believe, sometimes performed upon more liberal terms. Our friend, the young laird of Col, was fostered by Macsweyn of Grissipol. Macsweyn then lived a tenant to Sir James Macdonald in the isle of Sky, and therefore Col, whether he sent him cattle or not, could grant him no land. The *dalt*, however, at his return, brought back a considerable number of *Macalve* cattle, and of the friendship so formed there have been good effects. When Macdonald raised his rents, Macsweyn was, like other tenants, discontented, and, resigning his farm, removed from Sky to Col, and was established at Grissipol.

These observations we made by favour of the contrary wind that drove us to Col, an island not often visited; for there is not much to amuse curiosity, or to attract avarice.

The ground has been hitherto, I believe, used chiefly for pasturage. In a district, such as the eye can command, there is a general herdsman, who knows all the cattle of the neighbourhood, and whose station is upon a hill, from which he surveys the lower grounds, and if one man's cattle invade another's grass, drives them back to their own borders. But other means of profit begin to be found, kelp is

gathered and burnt, and sloops are loaded with the concreted ashes. Cultivation is likely to be improved by the skill and encouragement of the present heir, and the inhabitants of those obscure valleys will partake of the general progress of life.

The rents of the parts which belong to the duke of Argyll, have been raised from fifty-five to one hundred and five pounds, whether from the land or the sea I cannot tell. The bounties of the sea have lately been so great, that a farm in Southuist has risen in ten years from a rent of thirty pounds to one hundred and eighty.

He who lives in Col, and finds himself condemned to solitary meals, and incommunicable reflection, will find the usefulness of that middle order of tacksmen, which some who applaud their own wisdom are wishing to destroy. Without intelligence man is not social, he is only gregarious, and little intelligence will there be, where all are constrained to daily labour, and every mind must wait upon the hand.

After having listened for some days to the tempest, and wandered about the island till our curiosity was satisfied, we began to think about our departure. To leave Col in October was not very easy. We however found a sloop which lay on the coast to carry kelp, and for a price which we thought levied upon our necessities, the master agreed to carry us to Mull, whence we might readily pass back to Scotland.

MULL

As we were to catch the first favourable breath, we spent the night not very elegantly nor pleasantly

in the vessel, and were landed next day at Tabor Morar, a port in Mull, which appears to an unexperienced eye formed for the security of ships; for its mouth is closed by a small island, which admits them through narrow channels into a basin sufficiently capacious. They are indeed safe from the sea, but there is a hollow between the mountains, through which the wind issues from the land with very mischievous violence.

There was no danger while we were there, and we found several other vessels at anchor, so that the port had a very commercial appearance.

The young laird of Col, who had determined not to let us lose his company, while there was any difficulty remaining, came over with us. His influence soon appeared, for he procured us horses, and conducted us to the house of doctor Maclean, where we found very kind entertainment and very pleasing conversation. Miss Maclean, who was born, and had been bred at Glasgow, having removed with her father to Mull, added to other qualifications, a great knowledge of the Earse language, which she had not learned in her childhood, but gained by study, and was the only interpreter of Earse poetry that I could ever find.

The isle of Mull is perhaps in extent the third of the Hebrides. It is not broken by waters, nor shot into promontories, but is a solid and compact mass, of breadth nearly equal to its length. Of the dimensions of the larger islands, there is no knowledge approaching to exactness. I am willing to estimate it as containing about three hundred square miles.

Mull had suffered like Sky by the black winter of

seventy-one, in which, contrary to all experience, a continued frost detained the snow eight weeks upon the ground. Against a calamity never known, no provision had been made, and the people could only pine in helpless misery. One tenant was mentioned, whose cattle perished to the value of three hundred pounds; a loss which probably more than the life of man is necessary to repair. In countries like these, the descriptions of famine become intelligible. Where by vigorous and artful cultivation of a soil naturally fertile, there is commonly a superfluous growth both of grain and grass, where the fields are crowded with cattle, and where every hand is able to attract wealth from a distance, by making something that promotes ease, or gratifies vanity, a dear year produces only a comparative want, which is rather seen than felt, and which terminates commonly in no worse effect, than that of condemning the lower orders of the community to sacrifice a little luxury to convenience, or at most a little convenience to necessity.

But where the climate is unkind, and the ground penurious, so that the most fruitful years produce only enough to maintain themselves, where life unimproved, and unadorned, fades into something little more than naked existence, and every one is busy for himself, without any arts by which the pleasure of others may be increased, if to the daily burden of distress any additional weight be added, nothing remains but to despair and die. In Mull the disappointment of a harvest, or a murrain among the cattle, cuts off the regular provision, and they who have no manufactures can purchase no part of

the superfluties of other countries. The consequence of a bad season is here not scarcity, but emptiness; and they whose plenty was barely a supply of natural and present need, when that slender stalk fails must perish with hunger

All travel has its advantages. If the passenger visits better countries, he may learn to improve his own, and if fortune carries him to worse, he may learn to enjoy it.

Mr. Boswell's curiosity strongly impelled him to survey Iona, or Icolmkill, which was to the early ages the great school of theology, and is supposed to have been the place of sepulture for the ancient kings. I, though less eager, did not oppose him

That we might perform this expedition, it was necessary to traverse a great part of Mull. We passed a day at Dr Maclean's, and could have been well contented to stay longer. But Col provided us horses, and we pursued our journey. This was a day of inconvenience, for the country is very rough, and my horse was but little. We travelled many hours through a track, black and barren, in which, however, there were the reliques of humanity; for we found a ruined chapel in our way

It is natural, in traversing this gloom of desolation, to inquire, whether something may not be done to give nature a more cheerful face, and whether those hills and moors that afford heath cannot with a little care and labour bear something better. The first thought that occurs is to cover them with trees, for that in many of these naked regions trees will grow, is evident, because stumps and roots are yet re-

manning; and the speculatist hastily proceeds to censure that negligence and laziness that has omitted for so long a time so easy an improvement

To drop seeds into the ground, and attend their growth, requires little labour and no skill. He who remembers that all the woods, by which the wants of man have been supplied from the Deluge till now, were self-sown, will not easily be persuaded to think all the art and preparation necessary, which the georgick writers prescribe to planters. Trees certainly have covered the earth with very little culture. They wave their tops among the rocks of Norway, and might thrive as well in the Highlands and Hebrides

But there is a frightful interval between the seed and timber. He that calculates the growth of trees, has the unwelcome remembrance of the shortness of life driven hard upon him. He knows that he is doing what will never benefit himself; and when he rejoices to see the stem rise, is disposed to repine that another shall cut it down

Plantation is naturally the employment of a mind unburdened with care, and vacant to futurity, saturated with present good, and at leisure to derive gratification from the prospect of posterity. He that pines with hunger, is in little care how others shall be fed. The poor man is seldom studious to make his grandson rich. It may be soon discovered, why in a place, which hardly supplies the cravings of necessity, there has been little attention to the delights of fancy, and why distant convenience is unregarded, where the thoughts are turned with

incessant solicitude upon every possibility of immediate advantage

Neither is it quite so easy to raise large woods, as may be conceived. Trees intended to produce timber must be sown where they are to grow; and ground sown with trees must be kept useless for a long time, inclosed at an expense from which many will be discouraged by the remoteness of the profit, and watched with that attention, which, in places where it is most needed, will neither be given nor bought. That it cannot be ploughed is evident, and if cattle be suffered to graze upon it, they will devour the plants as fast as they rise. Even in coarser countries, where herds and flocks are not fed, not only the deer and the wild goats will browse upon them, but the hare and rabbit will nibble them. It is, therefore, reasonable to believe, what I do not remember any naturalist to have remarked, that there was a time when the world was very thinly inhabited by beasts, as well as men, and that the woods had leisure to rise high before animals had bred numbers sufficient to intercept them.

Sir James Macdonald, in part of the wastes of his territory, set or sowed trees, to the number, as I have been told, of several millions, expecting, doubtless, that they would grow up into future navies and cities; but for want of inclosure, and of that care which is always necessary, and will hardly ever be taken, all his cost and labour have been lost, and the ground is likely to continue an useless heath

Having not any experience of a journey in Mull, we had no doubt of reaching the sea by day-light, and therefore had not left Dr Maclean's very early.

We travelled diligently enough, but found the country, for road there was none, very difficult to pass. We were always struggling with some obstruction or other, and our vexation was not balanced by any gratification of the eye or mind. We were now long enough acquainted with hills and heath to have lost the emotion that they once raised, whether pleasing or painful, and had our mind employed only on our own fatigue. We were however sure, under Col's protection, of escaping all real evils. There was no house in Mull to which he could not introduce us. He had intended to lodge us, for that night, with a gentleman that lived upon the coast, but discovered on the way, that he then lay in bed without hope of life.

We resolved not to embarrass a family, in a time of so much sorrow, if any other expedient could be found; and as the island of Ulva was over-against us, it was determined that we should pass the strait and have recourse to the land, who, like the other gentlemen of the islands, was known to Col. We expected to find a ferry-boat, but when at last we came to the water, the boat was gone.

We were now again at a stop. It was the sixteenth of October, a time when it is not convenient to sleep in the Hebrides without a cover, and there was no house within our reach, but that which we had already declined.

ULVA

While we stood deliberating, we were happily espied from an Irish ship, that lay at anchor in the strait. The master saw that we wanted a passage,

and with great civility sent us his boat, which quickly conveyed us to Ulva, where we were very liberally entertained by Mr. Macquarry.

To Ulva we came in the dark, and left it before noon the next day. A very exact description therefore will not be expected. We were told, that it is an island of no great extent, rough and barren, inhabited by the Macquarrys; a clan not powerful nor numerous, but of antiquity, which most other families are content to reverence. The name is supposed to be a depravation of some other, for the Earse language does not afford it any etymology. Macquarry is proprietor both of Ulva and some adjacent islands, among which is Staffa, so lately raised to renown by Mr Banks.

When the islanders were reproached with their ignorance, or insensibility of the wonders of Staffa, they had not much to reply. They had indeed considered it little, because they had always seen it; and none but philosophers, nor they always, are struck with wonder, otherwise than by novelty. How would it surprise an unenlightened ploughman, to hear a company of sober men, inquiring by what power the hand tosses a stone, or why the stone, when it is tossed, falls to the ground!

Of the ancestors of Macquarry, who thus lie hid in his unfrequented island, I have found memorials in all places where they could be expected.

Inquiring after the reliques of former manners, I found that in Ulva, and, I think, no where else, is continued the payment of the mercheat mulierum; a fine in old times due to the laird at a marriage of a virgin. The original of this claim, as of our tenure

of borough English, is variously delivered. It is pleasant to find ancient customs in old families. This payment, like others, was, for want of money, made anciently in the produce of the land. Macquarry was used to demand a sheep, for which he now takes a crown, by that inattention to the uncertain proportion between the value and the denomination of money, which has brought much disorder into Europe. A sheep has always the same power of supplying human wants, but a crown will bring at one time more, at another less.

Ulva was not neglected by the piety of ancient times; it has still to show what was once a church.

INCH KENNETH

In the morning we went again into the boat, and were landed on Inch Kenneth, an island about a mile long, and perhaps half a mile broad, remarkable for pleasantness and fertility. It is verdant and grassy, and fit both for pasture and tillage, but it has no trees. Its only inhabitants were Sir Allan Maclean and two young ladies, his daughters, with their servants.

Romance does not often exhibit a scene that strikes the imagination more than this little desert in these depths of western obscurity, occupied not by a gross herdsman, or amphibious fisherman, but by a gentleman and two ladies, of high birth, polished manners, and elegant conversation, who, in a habitation raised not very far above the ground, but furnished with unexpected neatness and convenience, practised all the kindness of hospitality, and refinement of courtesy.

Sir Allan is the chieftain of the great clan of Maclean, which is said to claim the second place among the Highland families, yielding only to Macdonald. Though by the misconduct of his ancestors, most of the extensive territory, which would have descended to him, has been alienated, he still retains much of the dignity and authority of his birth. When soldiers were lately wanting for the American war, application was made to Sir Allan, and he nominated a hundred men for the service, who obeyed the summons, and bore arms under his command.

He had then, for some time, resided with the young ladies in Inch Kenneth, where he lives not only with plenty, but with elegance, having conveyed to his cottage a collection of books, and what else is necessary to make his hours pleasant.

When we landed, we were met by Sir Allan and the ladies, accompanied by Miss Macquarry, who had passed some time with them, and now returned to Ulva with her father.

We all walked together to the mansion, where we found one cottage for Sir Allan, and I think two more for the domesticks and the offices. We entered and wanted little that palaces afford. Our room was neatly floored, and well lighted, and our dinner, which was dressed in one of the other huts, was plentiful and delicate.

In the afternoon Sir Allan reminded us, that the day was Sunday, which he never suffered to pass without some religious distinction, and invited us to partake in his acts of domestick worship, which

I hope neither Mr. Boswell nor myself will be suspected of a disposition to refuse. The elder of the ladies read the English service.

Inch Kenneth was once a seminary of ecclesiasticks, subordinate, I suppose, to Icolmkill. Sir Allan had a mind to trace the foundation of the college, but neither I nor Mr. Boswell, who *bends a keener eye on vacancy*, were able to perceive them.

Our attention, however, was sufficiently engaged by a venerable chapel, which stands yet entire, except that the roof is gone. It is about sixty feet in length, and thirty in breadth. On one side of the altar is a bas-relief of the blessed Virgin, and by it lies a little bell; which, though cracked, and without a clapper, has remained there for ages, guarded only by the venerableness of the place. The ground round the chapel is covered with grave-stones of chiefs and ladies; and still continues to be a place of sepulture.

Inch Kenneth is a proper prelude to Icolmkill. It was not without some mournful emotion that we contemplated the ruins of religious structures, and the monuments of the dead.

On the next day we took a more distinct view of the place, and went with the boat to see oysters in the bed, out of which the boat-men forced up as many as were wanted. Even Inch Kenneth has a subordinate island, named Sandiland, I suppose in contempt, where we landed, and found a rock, with a surface of perhaps four acres, of which one is naked stone, another spread with sand and shells, some of which I picked up for their glossy beauty, and two covered

with a little earth and grass, on which Sir Allan has a few sheep. I doubt not but when there was a college at Inch Kenneth, there was a hermitage upon Sandiland.

Having wandered over those extensive plains, we committed ourselves again to the winds and waters; and after a voyage of about ten minutes, in which we met with nothing very observable, were again safe upon dry ground.

We told Sir Allan our desire of visiting Icolmkill, and entreated him to give us his protection, and his company. He thought proper to hesitate a little; but the ladies hinted, that as they knew he would not finally refuse, he would do better if he preserved the grace of ready compliance. He took their advice, and promised to carry us on the morrow in his boat.

We passed the remaining part of the day in such amusements as were in our power. Sir Allan related the American campaign, and at evening one of the ladies played on her harpsichord, while Col and Mr Boswell danced a Scottish reel with the other.

We could have been easily persuaded to a longer stay upon Inch Kenneth, but life will not be all passed in delight. The session at Edinburgh was approaching, from which Mr. Boswell could not be absent.

In the morning our boat was ready it was high and strong. Sir Allan victualled it for the day, and provided able rowers. We now parted from the young laird of Col, who had treated us with so much kindness, and concluded his favours by consigning us to Sir Allan. Here we had the last embrace of this

amiable man, who, while these pages were preparing to attest his virtues, perished in the passage between Ulva and Inch Kenneth

Sir Allan, to whom the whole region was well known, told us of a very remarkable cave, to which he would show us the way. We had been disappointed already by one cave, and were not much elevated by the expectation of another.

It was yet better to see it, and we stopped at some rocks on the coast of Mull. The mouth is fortified by vast fragments of stone, over which we made our way, neither very nimbly, nor very securely. The place, however, well repaid our trouble. The bottom, as far as the flood rushes in, was encumbered with large pebbles, but as we advanced was spread over with smooth sand. The breadth is about forty-five feet: the roof rises in an arch, almost regular, to a height which we could not measure; but I think it about thirty feet

This part of our curiosity was nearly frustrated; for though we went to see a cave, and knew that caves are dark, we forgot to carry tapers, and did not discover our omission till we were awakened by our wants. Sir Allan then sent one of the boatmen into the country, who soon returned with one little candle. We were thus enabled to go forward, but could not venture far. Having passed inward from the sea to a great depth, we found on the right hand a narrow passage, perhaps not more than six feet wide, obstructed by great stones, over which we climbed, and came into a second cave in breadth twenty-five feet. The air in this apartment was

very warm, but not oppressive, nor loaded with vapours. Our light showed no tokens of a feculent or corrupted atmosphere. Here was a square stone, called, as we are told, Fingal's table

If we had been provided with torches, we should have proceeded in our search, though we had already gone as far as any former adventurer, except some who are reported never to have returned; and measuring our way back, we found it more than a hundred and sixty yards, the eleventh part of a mile.

Our measures were not critically exact, having been made with a walking pole, such as it is convenient to carry in these rocky countries, of which I guessed the length by standing against it. In this there could be no great error, nor do I much doubt but the Highlander, whom we employed, reported the number right. More nicety however is better, and no man should travel unprovided with instruments for taking heights and distances.

There is yet another cause of error not always easily surmounted, though more dangerous to the veracity of itinerary narratives, than imperfect mensuration. An observer deeply impressed by any remarkable spectacle, does not suppose that the traces will soon vanish from his mind, and having commonly no great convenience for writing, defers the description to a time of more leisure and better accommodation.

He who has not made the experiment, or who is not accustomed to require rigorous accuracy from himself, will scarcely believe how much a few hours take from certainty of knowledge, and distinctness of imagery; how the succession of objects will be

broken, how separate parts will be confused, and how many particular features and discriminations will be compressed and conglobated into one gross and general idea.

To this dilatory notation must be imputed the false relations of travellers, where there is no imaginable motive to deceive. They trusted to memory what cannot be trusted safely but to the eye, and told by guess what a few hours before they had known with certainty. Thus it was that Wheeler and Spon described with irreconcilable contrariety things which they surveyed together, and which both undoubtedly designed to show as they saw them.

When we had satisfied our curiosity in the cave, so far as our penury of light permitted us, we clambered again to our boats, and proceeded along the coast of Mull to a headland, called Atun, remarkable for the columnar form of the rocks, which rise in a series of pilasters, with a degree of regularity, which Sir Allan thinks not less worthy of curiosity than the shore of Staffa.

Not long after we came to another range of black rocks, which had the appearance of broken pilasters, set one behind another to a great depth. This place was chosen by Sir Allan for our dinner. We were easily accommodated with seats, for the stones were of all heights, and refreshed ourselves and our boatmen, who could have no other rest till we were at Icolmkill.

The evening was now approaching, and we were yet at a considerable distance from the end of our expedition. We could therefore stop no more to make remarks in the way, but set forward with some degree

of eagerness The day soon failed us, and the moon presented a very solemn and pleasing scene. The sky was clear, so that the eye commanded a wide circle: the sea was neither still nor turbulent; the wind neither silent nor loud. We were never far from one coast or another, on which, if the weather had become violent, we could have found shelter, and therefore contemplated at ease the region through which we glided in the tranquillity of the night, and saw now a rock and now an island grow gradually conspicuous and gradually obscure I committed the fault which I have just been censuring, in neglecting, as we passed, to note the series of this placid navigation

We were very near an island, called Nun's Island, perhaps from an ancient convent Here is said to have been dug the stone which was used in the buildings of Icolmkill Whether it is now inhabited we could not stay to inquire

At last we came to Icolmkill, but found no convenience for landing. Our boat could not be forced very near the dry ground, and our Highlanders carried us over the water.

We were now treading that illustrious island, which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge, and the blessings of religion. To abstract the mind from all local emotion would be impossible if it were endeavoured, and would be foolish if it were possible Whatever withdraws us from the power of our senses, whatever makes the past, the distant, or the future predominate over the present, advances us in

the dignity of thinking beings Far from me and from my friends be such frigid philosophy, as may conduct us indifferent and unmoved over any ground which has been dignified by wisdom, bravery, or virtue. That man is little to be envied, whose patriotism would not gain force upon the plain of Marathon, or whose piety would not grow warmer among the ruins of Iona.

We came too late to visit monuments. some care was necessary for ourselves. Whatever was in the island, Sir Allan could demand, for the inhabitants were Macleans, but having little they could not give us much He went to the headman of the island, whom fame, but fame delights in amplifying, represents as worth no less than fifty pounds He was perhaps proud enough of his guests, but ill prepared for our entertainment; however, he soon produced more provision than men not luxurious require Our lodging was next to be provided We found a barn well stocked with hay, and made our beds as soft as we could.

In the morning we rose and surveyed the place The churches of the two convents are both standing, though unroofed They were built of unhewn stone, but solid, and not inelegant I brought away rude measures of the buildings, such as I cannot much trust myself, inaccurately taken, and obscurely noted Mr. Pennant's delineations, which are doubtless exact, have made my unskilful description less necessary.

The episcopal church consists of two parts, separated by the belfry, and built at different times The original church had, like others, the altar at one end,

and tower at the other; but as it grew too small, another building of equal dimension was added, and the tower then was necessarily in the middle. §

That these edifices are of different ages seems evident. The arch of the first church is Roman, being part of a circle, that of the additional building is pointed, and therefore Gothick or Saracenic; the tower is firm, and wants only to be floored and covered.

Of the chambers or cells belonging to the monks, there are some walls remaining, but nothing approaching to a complete apartment,

The bottom of the church is so encumbered with mud and rubbish, that we could make no discoveries of curious inscriptions, and what there are have been already published. The place is said to be known where the black stones lie concealed, on which the old Highland chiefs, when they made contracts and alliances, used to take the oath, which was considered as more sacred than any other obligation, and which could not be violated without the blackest infamy. In those days of violence and rapine, it was of great importance to impress upon savage minds the sanctity of an oath, by some particular and extraordinary circumstances. They would not have recourse to the black stones, upon small or common occasions, and when they had established their faith by this tremendous sanction, inconstancy and treachery were no longer feared.

The chapel of the nunnery is now used by the inhabitants as a kind of general cow-house, and the bottom is consequently too muddy for examination.

Some of the stones which covered the later abbesses have inscriptions, which might yet be read, if the chapel were cleansed. The roof of this, as of all the other buildings, is totally destroyed, not only because timber quickly decays when it is neglected, but because in an island utterly destitute of wood, it was wanted for use, and was consequently the first plunder of needy rapacity.

The chancel of the nuns' chapel is covered with an arch of stone, to which time has done no injury ; and a small apartment communicating with the choir, on the north side, like the chapter-house in cathedrals, roofed with stone in the same manner, is likewise entire.

In one of the churches was a marble altar, which the superstition of the inhabitants has destroyed. Their opinion was, that a fragment of this stone was a defence against shipwrecks, fire, and miscarriages. In one corner of the church the basin for holy water is yet unbroken.

The cemetery of the nunnery was, till very lately, regarded with such reverence, that only women were buried in it. These reliques of veneration always produce some mournful pleasure. I could have forgiven a great injury more easily than the violation of this imaginary sanctity.

South of the chapel stand the walls of a large room, which was probably the hall, or refectory of the nunnery. This apartment is capable of repair. Of the rest of the convent there are only fragments.

Besides the two principal churches, there are, I think, five chapels yet standing, and three more re-

membered. There are also crosses, of which two bear the names of St John and St. Matthew.

A large space of ground about these consecrated edifices is covered with grave stones, few of which have any inscription. He that surveys it, attended by an insular antiquary, may be told where the kings of many nations are buried, and if he loves to sooth his imagination with the thoughts that naturally rise in places where the great and the powerful lie mingled with the dust, let him listen in submissive silence; for if he asks any questions, his delight is at an end.

Iona has long enjoyed, without any very credible attestation, the honour of being reputed the cemetery of the Scottish kings. It is not unlikely, that, when the opinion of local sanctity was prevalent, the chieftains of the isles, and perhaps some of the Norwegian or Irish princes, were reposed in this venerable inclosure. But by whom the subterraneous vaults are peopled is now utterly unknown. The graves are very numerous, and some of them undoubtedly contain the remains of men, who did not expect to be so soon forgotten.

Not far from this awful ground may be traced the garden of the monastery: the fishponds are yet discernible, and the aqueduct which supplied them is still in use.

There remains a broken building, which is called the Bishop's House, I know not by what authority. It was once the residence of some man above the common rank, for it has two stories and a chimney. We were shown a chimney at the other end, which was only a niche, without perforation, but so much

does antiquarian credulity, or patriotick vanity prevail, that it was not much more safe to trust the eye of our instructor than the memory.

There is in the island one house more, and only one, that has a chimney, we entered it, and found it neither wanting repair nor inhabitants, but to the farmers, who now possess it, the chimney is of no great value; for their fire was made on the floor, in the middle of the room, and notwithstanding the dignity of their mansion, they rejoiced, like their neighbours, in the comforts of smoke

It is observed, that ecclesiastical colleges are always in the most pleasant and fruitful places. While the world allowed the monks their choice, it is surely no dishonour that they chose well. This island is remarkably fruitful. The village near the churches is said to contain seventy families, which, at five in a family, is more than a hundred inhabitants to a mile. There are perhaps other villages, yet both corn and cattle are annually exported

But the fruitfulness of Iona is now its whole prosperity. The inhabitants are remarkably gross, and remarkably neglected. I know not if they are visited by any minister. The island, which was once the metropolis of learning and piety, has now no school for education, nor temple for worship, only two inhabitants that can speak English, and not one that can write or read

The people are of the clan of Maclean, and though Sir Allan had not been in the place for many years, he was received with all the reverence due to their chieftain. One of them being sharply reprehended by him, for not sending him some rum,

declared after his departure, in Mr Boswell's presence, that he had no design of disappointing him, "for," said he, "I would cut my bones for him, and if he had sent his dog for it, he should have had it "

When we were to depart, our boat was left by the ebb at a great distance from the water, but no sooner did we wish it afloat, than the islanders gathered round it, and, by the union of many hands, pushed it down the beach; every man who could contribute his help seemed to think himself happy in the opportunity of being, for a moment, useful to his chief.

We now left those illustrious ruins, by which Mr. Boswell was much affected, nor would I willingly be thought to have looked upon them without some emotion. Perhaps, in the revolutions of the world, Iona may be sometime again the instructress of the western regions.

It was no long voyage to Mull, where, under Sir Allan's protection, we landed in the evening, and were entertained for the night by Mr Maclean, a minister that lives upon the coast, whose elegance of conversation, and strength of judgment, would make him conspicuous in places of greater celebrity. Next day we dined with Dr Maclean, another physician, and then travelled on to the house of a very powerful laird, Maclean of Lochbuy, for in this country every man's name is Maclean.

Where races are thus numerous, and thus combined, none but the chief of a clan is addressed by his name. The laird of Dunvegan is called Macleod, but other gentlemen of the same family are denominated by the places where they reside, as Raasay

or Talisker. The distinction of the meaner people is made by their christian names. In consequence of this practice, the late laird of Macfarlane, an eminent genealogist, considered himself as disrespectfully treated, if the common addition was applied to him. Mr Macfarlane, said he, may with equal propriety be said to many; but I, and I only, am Macfarlane.

Our afternoon journey was through a country of such gloomy desolation, that Mr. Boswell thought no part of the Highlands equally terrifick, yet we came without any difficulty, at evening, to Lochbuy, where we found a true Highland laird, rough and haughty, and tenacious of his dignity, who, hearing my name, inquired whether I was of the Johnstones of Glencoe, or of Ardnamurchan?

Lochbuy has, like the other insular chieftains, quitted the castle that sheltered his ancestors, and lives near it, in a mansion not very spacious or splendid. I have seen no houses in the islands much to be envied for convenience or magnificence, yet they bear testimony to the progress of arts and civility, as they show that rapine and surprise are no longer dreaded, and are much more commodious than the ancient fortresses.

The castles of the Hebrides, many of which are standing, and many ruined, were always built upon points of land, on the margin of the sea. For the choice of this situation there must have been some general reason, which the change of manners has left in obscurity. They were of no use in the days of piracy, as defences of the coast, for it was equally accessible in other places. Had they been

sea-marks or light-houses, they would have been of more use to the invader than the natives, who could want no such directions on their own waters for a watch-tower, a cottage on a hill would have been better, as it would have commanded a wider view.

If they be considered merely as places of retreat, the situation seems not well chosen, for the laird of an island is safest from foreign enemies in the centre on the coast he might be more suddenly surprised than in the inland parts, and the invaders, if their enterprise miscarried, might more easily retreat. Some convenience, however, whatever it was, their position on the shore afforded, for uniformity of practice seldom continues long without good reason.

A castle in the islands is only a single tower of three or four stories, of which the walls are sometimes eight or nine feet thick, with narrow windows, and close winding stairs of stone. The top rises in a cone, or pyramid of stone, encompassed by battlements. The intermediate floors are sometimes frames of timber, as in common houses, and sometimes arches of stone, or alternately stone and timber, so that there was very little danger from fire. In the centre of every floor, from top to bottom, is the chief room, of no great extent, round which there are narrow cavities, or recesses formed by small vacuities, or by a double wall. I know not whether there be ever more than one fire-place. They had not capacity to contain many people, or much provision, but their enemies could seldom stay to blockade them; for if they failed in their first attack, their next care was to escape.

before the courts of justice were opened, and it was not proper to live too long upon hospitality, however liberally imparted

Of these islands it must be confessed, that they have not many allurements, but to the mere lover of naked nature. The inhabitants are thin, provisions are scarce, and desolation and penury give little pleasure

The people collectively considered are not few, though their numbers are small in proportion to the space which they occupy. Mull is said to contain six thousand, and Sky fifteen thousand. Of the computation respecting Mull, I can give no account, but when I doubted the truth of the numbers attributed to Sky, one of the ministers exhibited such facts as conquered my incredulity

Of the proportion which the product of any region bears to the people, an estimate is commonly made according to the pecuniary price of the necessaries of life, a principle of judgment which is never certain, because it supposes, what is far from truth, that the value of money is always the same, and so measures an unknown quantity by an uncertain standard. It is competent enough when the markets of the same country, at different times, and those times not too distant, are to be compared; but of very little use for the purpose of making one nation acquainted with the state of another. Provisions, though plentiful, are sold in places of great pecuniary opulence for nominal prices, to which, however scarce, where gold and silver are yet scarcer, they can never be raised.

they are, by men who had no money, in countries where the labourers and artificers could scarcely be fed. The buildings in different parts of the islands show their degrees of wealth and power. I believe that for all the castles which I have seen beyond the Tweed, the ruins yet remaining of some one of those which the English built in Wales, would supply materials.

These castles afford another evidence that the fictions of romantick chivalry had for their basis the real manners of the feudal times, when every lord of a seignory lived in his hold lawless and unaccountable, with all the licentiousness and insolence of uncontested superiority and unprincipled power. The traveller, whoever he might be, coming to the fortified habitation of a chieftain, would, probably, have been interrogated from the battlements, admitted with caution at the gate, introduced to a petty monarch, fierce with habitual hostility, and vigilant with ignorant suspicion, who, according to his general temper, or accidental humour, would have seated a stranger as his guest at the table, or as a spy confined him in the dungeon.

Lochbuy means the Yellow Lake, which is the name given to an inlet of the sea, upon which the castle of Mr Maclean stands. The reason of the appellation we did not learn.

We were now to leave the Hebrides, where we had spent some weeks with sufficient amusement, and where we had amplified our thoughts with new scenes of nature, and new modes of life. More time would have given us a more distinct view, but it was necessary that Mr. Boswell should return

From Lochbuy we rode a very few miles to the side of Mull, which faces Scotland, where, having taken leave of our kind protector, Sir Allan, we embarked in a boat, in which the seat provided for our accommodation was a heap of rough brushwood; and on the twenty-second of October reposed at a tolerable inn on the main land

On the next day we began our journey southwards. The weather was tempestuous. For half the day the ground was rough, and our horses were still small. Had they required much restraint, we might have been reduced to difficulties, for I think we had amongst us but one bridle. We fed the poor animals liberally, and they performed their journey well. In the latter part of the day we came to a firm and smooth road, made by the soldiers, on which we travelled with great security, busied with contemplating the scene about us. The night came on while we had yet a great part of the way to go, though not so dark, but that we could discern the cataracts which poured down the hills on one side, and fell into one general channel that ran with great violence on the other. The wind was loud, the rain was heavy, and the whistling of the blast, the fall of the shower, the rush of the cataracts, and the roar of the torrent, made a nobler chorus of the rough musick of nature than it had ever been my chance to hear before. The streams which ran across the way from the hills to the main current, were so frequent, that after a while I began to count them, and, in ten miles, reckoned fifty-five, probably missing some, and having let some

In the Western Islands there is so little internal commerce, that hardly any thing has a known or settled rate. The price of things brought in, or carried out, is to be considered as that of a foreign market; and even this there is some difficulty in discovering, because their denominations of quantity are different from ours, and when there is ignorance on both sides, no appeal can be made to a common measure.

This, however, is not the only impediment. The Scots, with a vigilance of jealousy which never goes to sleep, always suspect that an Englishman despises them for their poverty, and to convince him that they are not less rich than their neighbours, are sure to tell him a price higher than the true. When Lesley, two hundred years ago, related so punctiliously, that a hundred hen eggs, new laid, were sold in the islands for a penny, he supposed that no inference could possibly follow, but that eggs were in great abundance. Posterity has since grown wiser; and having learned, that nominal and real value may differ, they now tell no such stories, lest the foreigner should happen to collect, not that eggs are many, but that pence are few.

Money and wealth have, by the use of commercial language, been so long confounded, that they are commonly supposed to be the same; and this prejudice has spread so widely in Scotland, that I know not whether I found man or woman, whom I interrogated concerning payments of money, that could surmount the illiberal desire of deceiving me, by representing every thing as dearer than it is.

haps not more than half an acre, remarkable for the ruins of an old castle, on which the osprey builds her annual nest. Had Loch Lomond been in a happier climate, it would have been the boast of wealth and vanity to own one of the little spots which it incloses, and to have employed upon it all the arts of embellishment. But as it is, the islets, which court the gazer at a distance, disgust him at his approach, when he finds, instead of soft lawns and shady thickets, nothing more than uncultivated ruggedness.

Where the loch discharges itself into a river called the Leven, we passed a night with Mr. Smollet, a relation of doctor Smollet, to whose memory he has raised an obelisk on the bank near the house in which he was born. The civility and respect which we found at every place, it is ungrateful to omit, and tedious to repeat. Here we were met by a post-chaise, that conveyed us to Glasgow.

To describe a city so much frequented as Glasgow, is unnecessary. The prosperity of its commerce appears by the greatness of many private houses, and a general appearance of wealth. It is the only episcopal city whose cathedral was left standing in the rage of Reformation. It is now divided into many separate places of worship, which, taken all together, compose a great pile, that had been some centuries in building, but was never finished; for the change of religion intercepted its progress, before the cross aisle was added, which seems essential to a Gothick cathedral.

The college has not had a sufficient share of the increasing magnificence of the place. The session

pass before they forced themselves upon my notice. At last we came to Inverary, where we found an inn, not only commodious, but magnificent.

The difficulties of peregrination were now at an end. Mr. Boswell had the honour of being known to the duke of Argyll, by whom we were very kindly entertained at his splendid seat, and supplied with conveniences for surveying his spacious park and rising forests.

After two days stay at Inverary we proceeded southward over Glencoe, a black and dreary region, now made easily passable by a military road which rises from either end of the glen by an acclivity not dangerously steep, but sufficiently laborious. In the middle, at the top of the hill, is a seat with this inscription, *Rest, and be thankful*. Stones were placed to mark the distances, which the inhabitants have taken away, resolved, they said, to have no *new miles*.

In this rainy season the hills streamed with waterfalls, which, crossing the way, formed currents on the other side, that ran in contrary directions as they fell to the north or south of the summit. Being, by the favour of the duke, well mounted, I went up and down the hill with great convenience.

From Glencoe we passed through a pleasant country to the banks of Loch Lomond, and were received at the house of Sir James Colquhoun, who is owner of almost all the thirty islands of the loch, which we went in a boat next morning to survey. The heaviness of the rain shortened our voyage, but we landed on one island planted with yew, and stocked with deer, and on another containing per-

ignorance, not inadequate to the purposes of common life, which is, I believe, very widely diffused among them, and which, countenanced in general by a national combination so invidious, that their friends cannot defend it, and actuated in particulars by a spirit of enterprise, so vigorous, that their enemies are constrained to praise it, enables them to find, or to make their way to employment, riches, and distinction

From Glasgow we directed our course to Auchinleck, an estate devolved, through a long series of ancestors, to Mr. Boswell's father, the present possessor. In our way we found several places remarkable enough in themselves, but already described by those who viewed them at more leisure, or with much more skill, and stopped two days at Mr. Campbell's, a gentleman married to Mr. Boswell's sister

Auchinleck, which signifies a *stony field*, seems not now to have any particular claim to its denomination. It is a district generally level, and sufficiently fertile, but, like all the western side of Scotland, incommoded by very frequent rain. It was, with the rest of the country, generally naked, till the present possessor finding, by the growth of some stately trees near his old castle, that the ground was favourable enough to timber, adorned it very diligently with annual plantations.

Lord Auchinleck, who is one of the judges of Scotland, and therefore not wholly at leisure for domestick business or pleasure, has yet found time to make improvements in his patrimony. He has built a house of hewn stone, very stately and dura-

was begun, for it commences on the tenth of October, and continues to the tenth of June, but the students appeared not numerous, being, I suppose, not yet returned from their several homes. The division of the academical year into one session, and one recess, seems to me better accommodated to the present state of life, than that variegation of time by terms and vacations, derived from distant centuries, in which it was probably convenient, and still continued in the English universities. So many solid months as the Scotch scheme of education joins together, allow and encourage a plan for each part of the year; but with us, he that has settled himself to study in the college is soon tempted into the country, and he that has adjusted his life in the country, is summoned back to his college.

Yet when I have allowed to the universities of Scotland a more rational distribution of time, I have given them, so far as my inquiries have informed me, all that they can claim. The students, for the most part, go thither boys, and depart before they are men; they carry with them little fundamental knowledge, and therefore the superstructure cannot be lofty. The Grammar-schools are not generally well supplied, for the character of a school-master being there less honourable than in England, is seldom accepted by men who are capable to adorn it, and where the school has been deficient, the college can effect little.

Men bred in the universities of Scotland cannot be expected to be often decorated with the splendours of ornamental erudition, but they obtain a mediocrity of knowledge, between learning and

half a century provincial and rustick, even to themselves. The great, the learned, the ambitious, and the vain, all cultivate the English phrase, and the English pronunciation, and in splendid companies Scotch is not much heard, except now and then from an old lady

There is one subject of philosophical curiosity to be found in Edinburgh, which no other city has to show, a college of the deaf and dumb, who are taught to speak, to read, to write, and to practise arithmetick, by a gentleman, whose name is Braidwood. The number which attends him is, I think, about twelve, which he brings together into a little school, and instructs according to their several degrees of proficiency

I do not mean to mention the instruction of the deaf as new. Having been first practised upon the son of a constable of Spain, it was afterwards cultivated with much emulation in England, by Wallis and Holder, and was lately professed by Mr Baker, who once flattered me with hopes of seeing his method published. How far any former teachers have succeeded, it is not easy to know, the improvement of Mr. Braidwood's pupils is wonderful. They not only speak, write, and understand what is written, but if he that speaks looks towards them, and modifies his organs by distinct and full utterance, they know so well what is spoken, that it is an expression scarcely figurative to say, they hear with the eye. That any have attained to the power mentioned by Burnet, of feeling sounds, by laying a hand on the speaker's mouth, I know not, but I have seen so much, that I can believe more, a single word, or a

ble, and has advanced the value of his lands with great tenderness to his tenants.

I was, however, less delighted with the elegance of the modern mansion, than with the sullen dignity of the old castle. I clambered with Mr. Boswell among the ruins, which afford striking images of ancient life. It is, like other castles, built upon a point of rock, and was, I believe, anciently surrounded with a moat. There is another rock near it, to which the draw-bridge, when it was let down, is said to have reached. Here, in the ages of tumult and rapine, the laird was surprised and killed by the neighbouring chief, who perhaps might have extinguished the family, had he not in a few days been seized and hanged, together with his sons, by Douglas, who came with his forces to the relief of Auchinleck.

At no great distance from the house runs a pleasing brook, by a red rock, out of which has been hewn a very agreeable and commodious summer-house, at less expense, as lord Auchinleck told me, than would have been required to build a room of the same dimensions. The rock seems to have no more dampness than any other wall. Such opportunities of variety it is judicious not to neglect.

We now returned to Edinburgh, where I passed some days with men of learning, whose names want no advancement from my commemoration, or with women of elegance, which perhaps disclaims a pendent's praise.

The conversation of the Scots grows every day less displeasing to the English; their peculiarities wear fast away; their dialect is likely to become in

Such are the things which this journey has given me an opportunity of seeing, and such are the reflections which that sight has raised. Having passed my time almost wholly in cities, I may have been surprised by modes of life and appearances of nature, that are familiar to men of wider survey and more varied conversation. Novelty and ignorance must always be reciprocal, and I cannot but be conscious that my thoughts on national manners are the thoughts of one who has seen but little.

END OF THE EIGHTH VOLUME

LONDON:

PRINTED BY THOMAS DAVISON, WHITEFRIARS

short sentence, I think, may possibly be so distinguished.

It will readily be supposed by those that consider this subject, that Mr. Braidwood's scholars spell accurately. Orthography is vitiated among such as learn first to speak, and then to write, by imperfect notions of the relation between letters and vocal utterance; but to those students every character is of equal importance; for letters are to them not symbols of names, but of things; when they write they do not represent a sound, but delineate a form.

This school I visited, and found some of the scholars waiting for their master, whom they are said to receive at his entrance with smiling countenances and sparkling eyes, delighted with the hope of new ideas. One of the young ladies had her slate before her, on which I wrote a question consisting of three figures, to be multiplied by two figures. She looked upon it, and quivering her fingers in a manner which I thought very pretty, but of which I knew not whether it was art or play, multiplied the sum regularly in two lines, observing the decimal place, but did not add the two lines together, probably disdaining so easy an operation. I pointed at the place where the sum total should stand, and she noted it with such expedition as seemed to show that she had it only to write.

It was pleasing to see one of the most desperate of human calamities capable of so much help. whatever enlarges hope, will exalt courage; after having seen the deaf taught arithmetick, who would be afraid to cultivate the Hebrides?
